IMPORTANT, NOTE, TIP, MOBILE, or VIDEO: An information icon indicates supporting information.

What's New in erwin EA Agile?

The following are a list of features by release date that has been added to the platform.

We also include a list of defects that have been fixed.

The reference numbers are internal erwin references that you may use in correspondence with us.

9th March - EA Agile v2 & v3 - Release 133

Improvements:

Comments

- When a User is mentioned in a comment they can now navigate directly to an object instance from an e-mail or in-application notification

Fixes:

- Counts display the wrong value when objects have multiple list-keys
- Image attribute of a related object doesn't display on a table

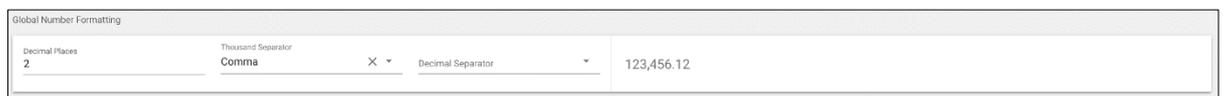

24th February - EA Agile v2 & v3 - Release 132

New:

Line Charts

Display Masks

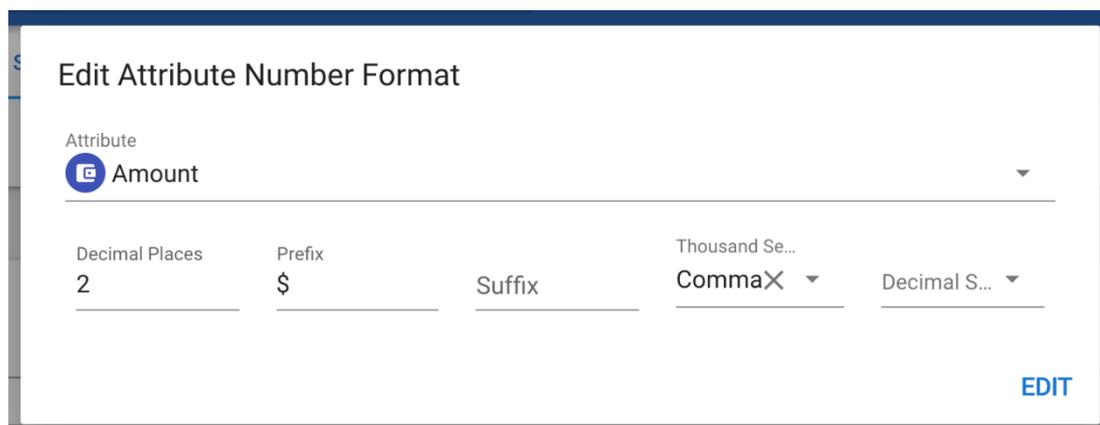

- Format values within your environment by setting a Display Mask. Display Masks can be set at 3 different levels: For all numbers in your environment, Everywhere an attribute is displayed, or for a single View.

Global Number Formatting

Decimal Places	Thousand Separator	Decimal Separator	
2	Comma X		123,456.12

Format all numbers in your environment

Edit Attribute Number Format

Attribute
Amount

Decimal Places	Prefix	Suffix	Thousand Se...	Decimal S...
2	\$		CommaX	

EDIT

Format an attributes appearance for everywhere it's displayed

Number formatting is useful for displaying currency

Fixes:

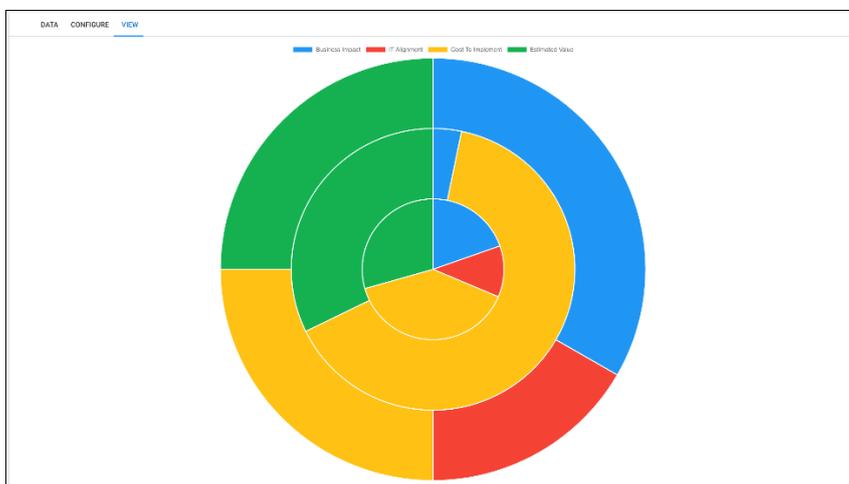

- Errors with Chart render size when resizing layout views
- Import allows duplicate Object names

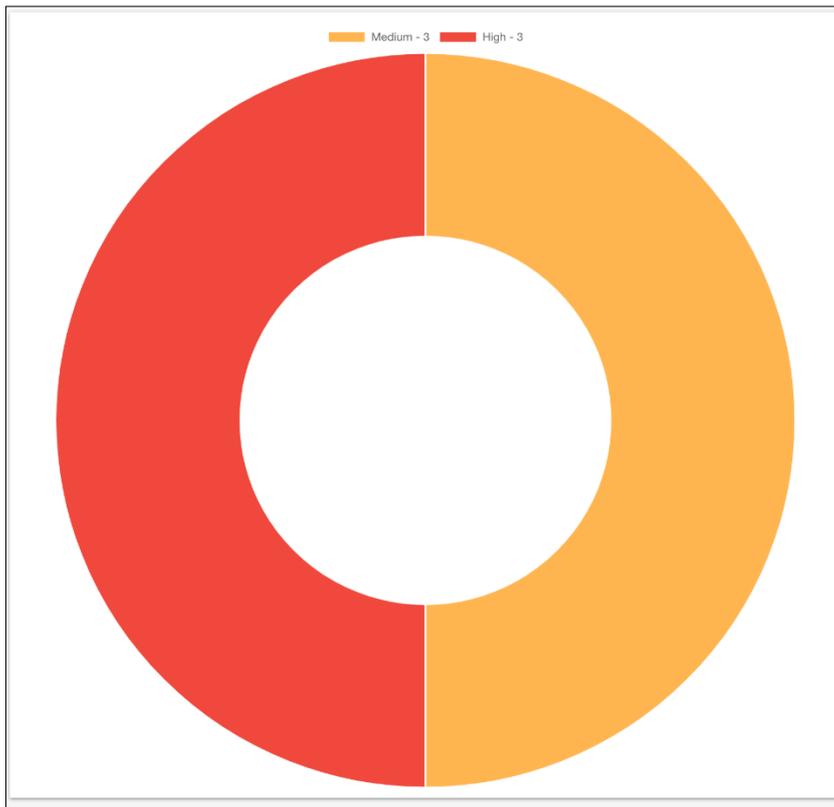

27th January - EA Agile v2 & v3 - Release 131

New:

Donut/Pie Charts

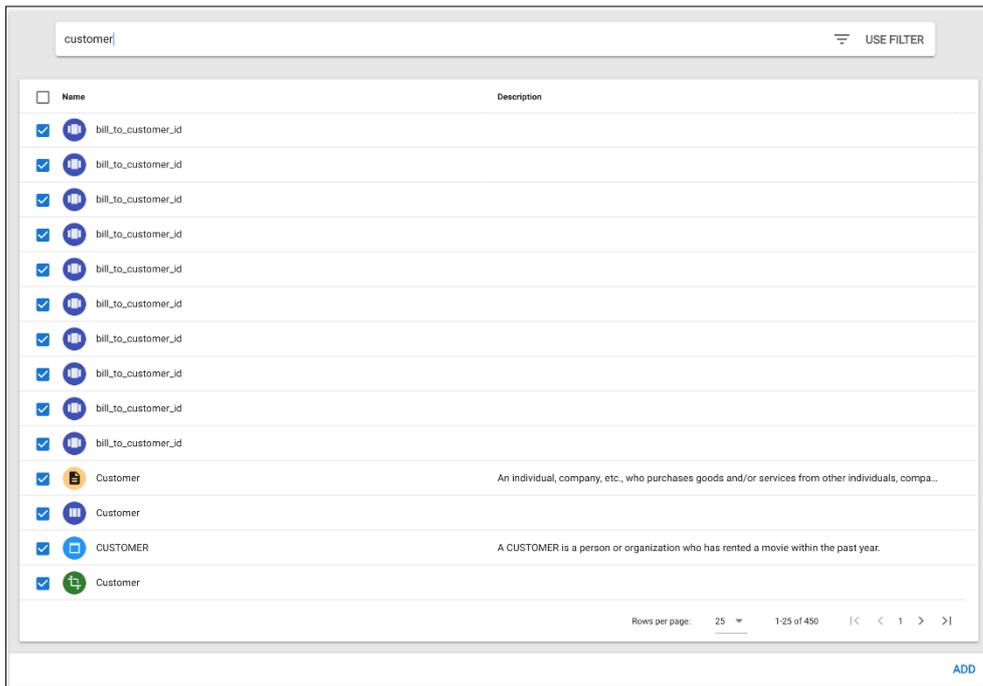

- Analyze the proportion of a data set using pie/donut charts. The new charts work with all numeric attribute types available on the platform and work with attributes of a data set or individual objects.

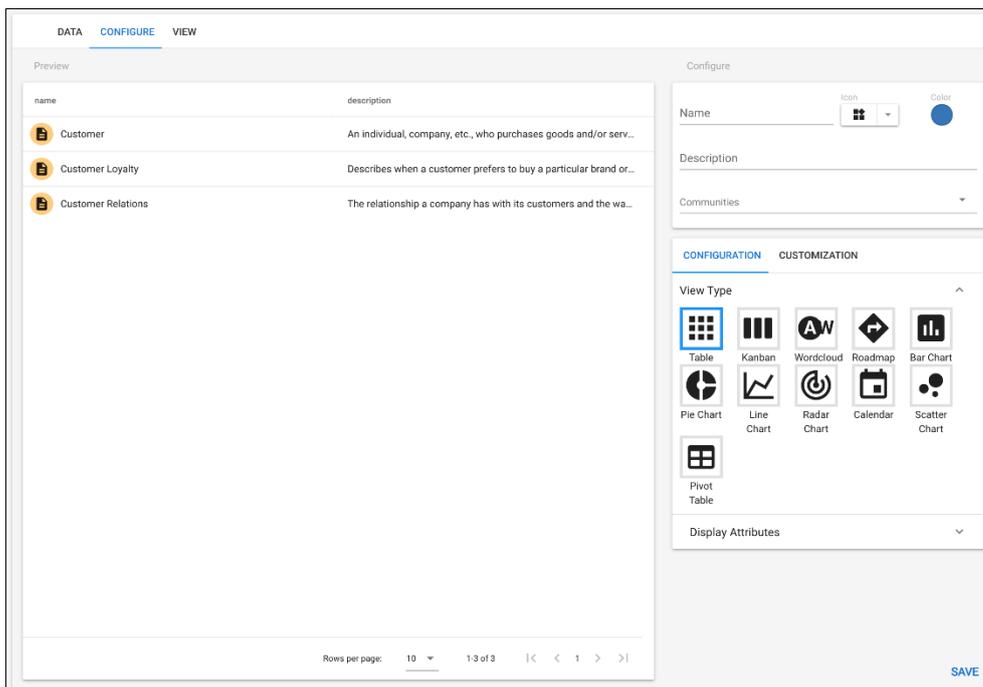

User Views

- Perform self-service analysis on their repository using User Views. This new view type allows users to create personal & custom reports utilizing the various view types available on the platform. Search & Define a custom data set or use a pre-existing filter.

Users can search their repository to create custom data-sets

Once a data-set has been defined (or a Filter selected) Users can create a report using the Views/Charts available

Fixes:

- Date Ranges erroring when used in filters

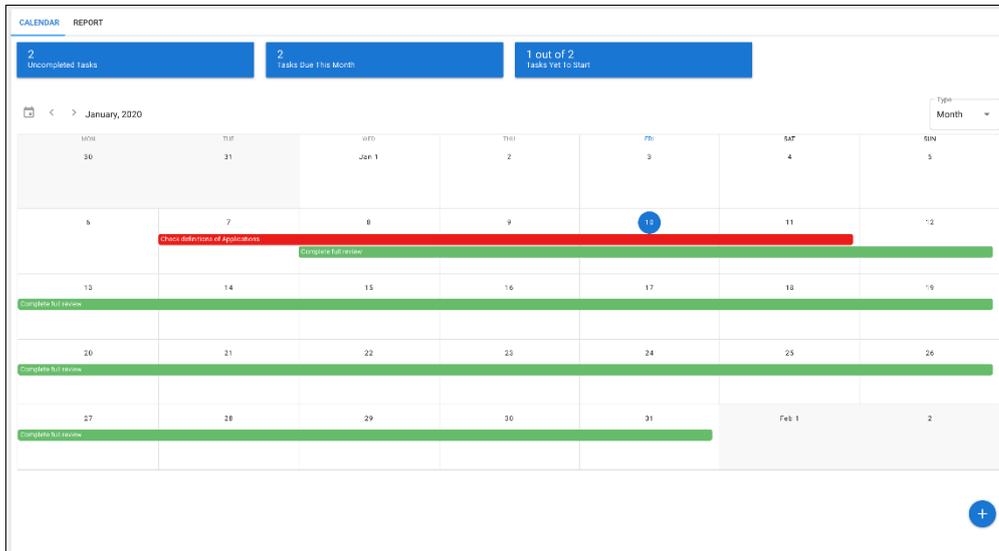

- Changing diagram type name breaks diagrams
- Action: 'Report', Scorecard Attribute is Empty in Radar Chart

13th January - EA Agile v2 & v3 - Release 130

New:

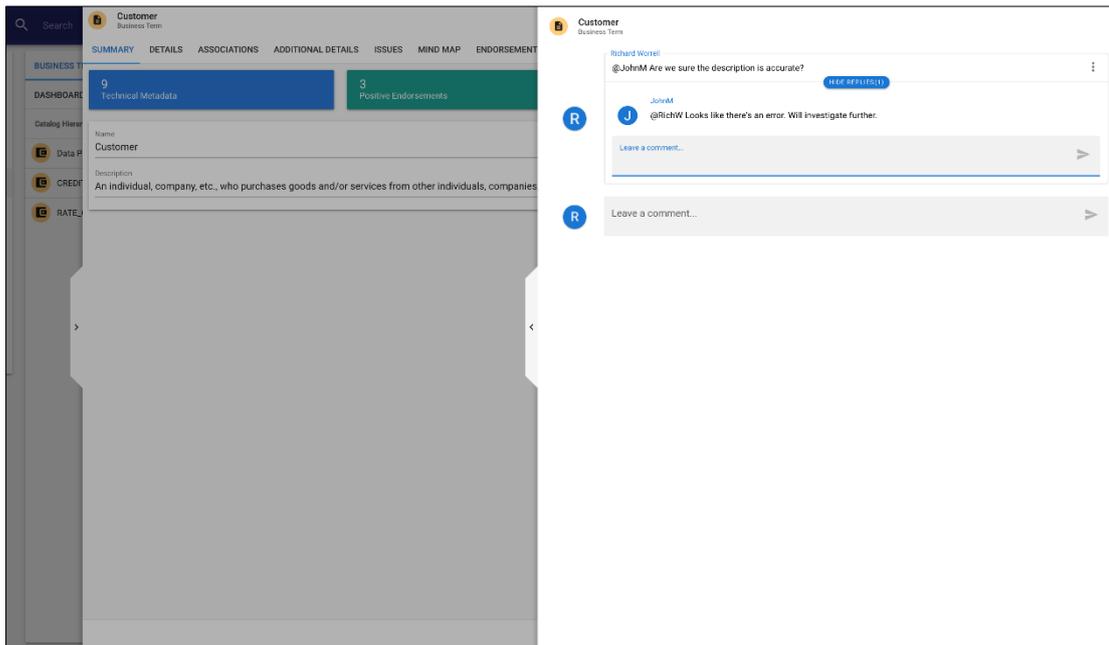

Calendar View

- We've added an additional view type into EA Agile v3, allowing users to view any objects with date/time attributes in a Calendar View.

Comments & Mentions

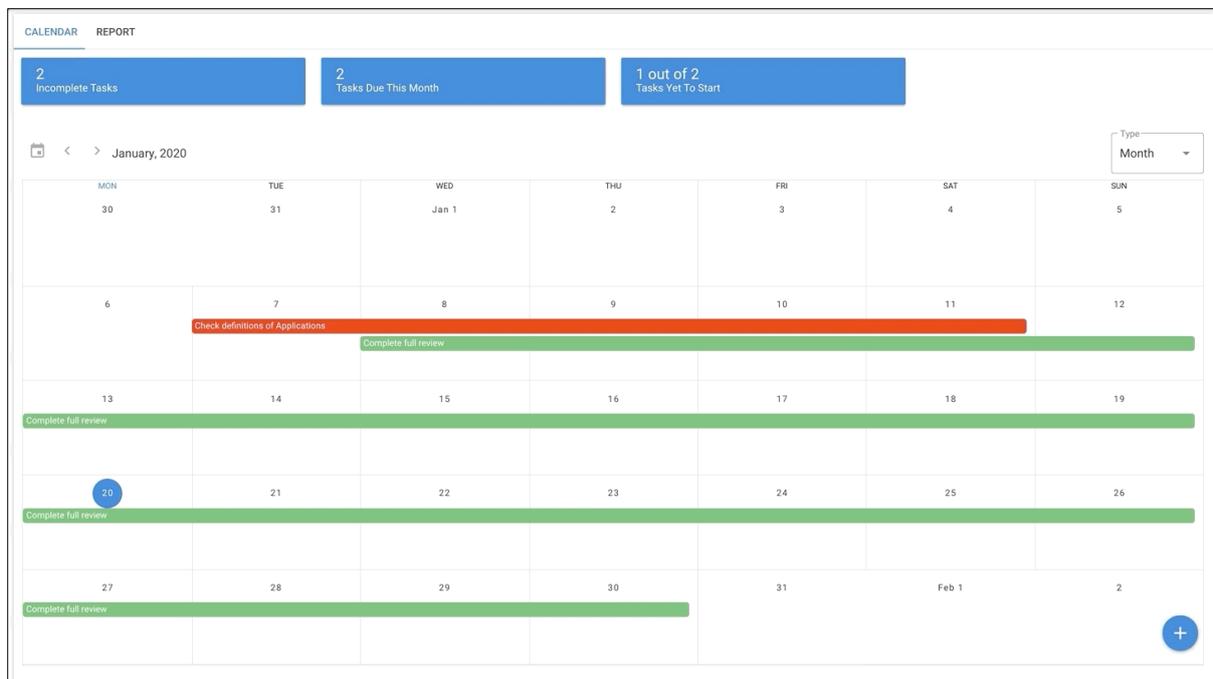

- Collaborate on objects by adding comments and mentioning other users. Those mentioned will receive an in-app & email notification.

Improved:

Click Behavior Added to Count Views

- Users can now add click behavior to count Count Views.

Filters - Add date Intervals

- We've added additional operations to Filters to support date intervals. e.g. Show me all objects created in the last week or show me all Opportunities that are expected to close in the next 7 days

Name
Opps due to close in the next week

Description

Parameters
+ Add Parameter

Week
Day
Hour

Updated Bar & Scatter Chart UI

- We've updated the library that supports our Bar and Scatter chart type. As a result of this update, the UI of these charts types has been improved. Users will also notice tooltips on the chart types contain object information and plotted values.

Fixes:

- Image Attribute render incorrectly as Icon
- Date/Time not rendering in tables
- Tree View: Click behavior

3rd January - EA Agile v2 & v3 - Release 129.2

Fixes:

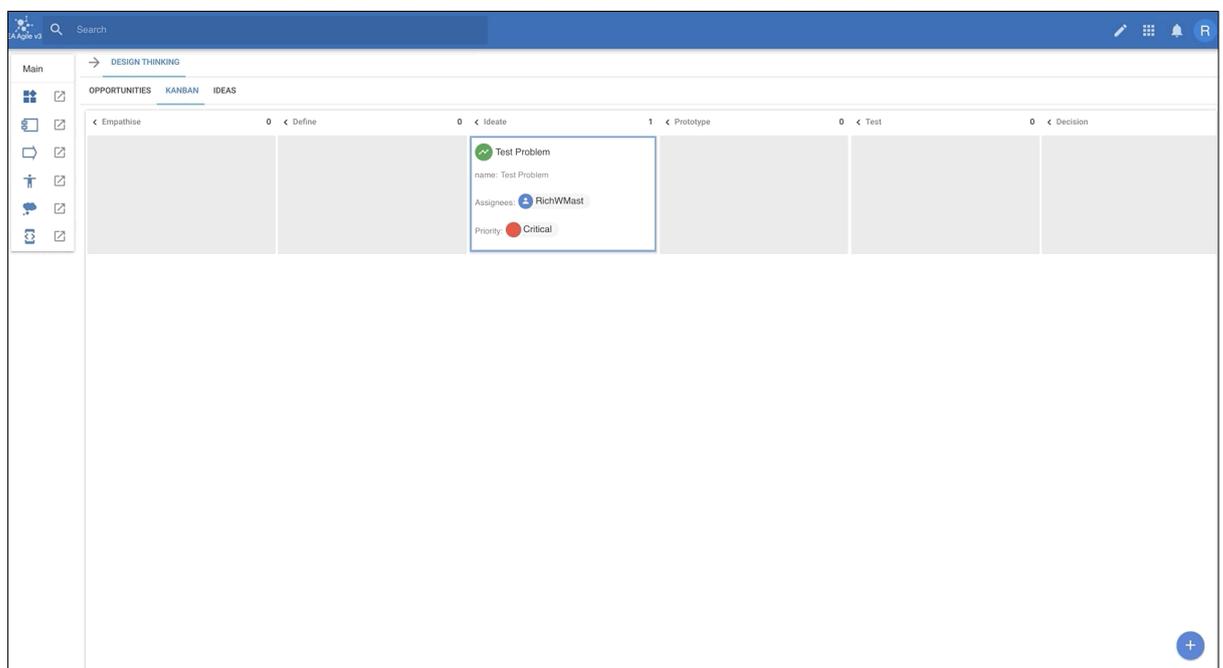

- Computed Attributes failed to recompute
- Item Actions on Query Tables required display item

2nd December - EA Agile v2 & v3 - Release 129 & 129.1

New:

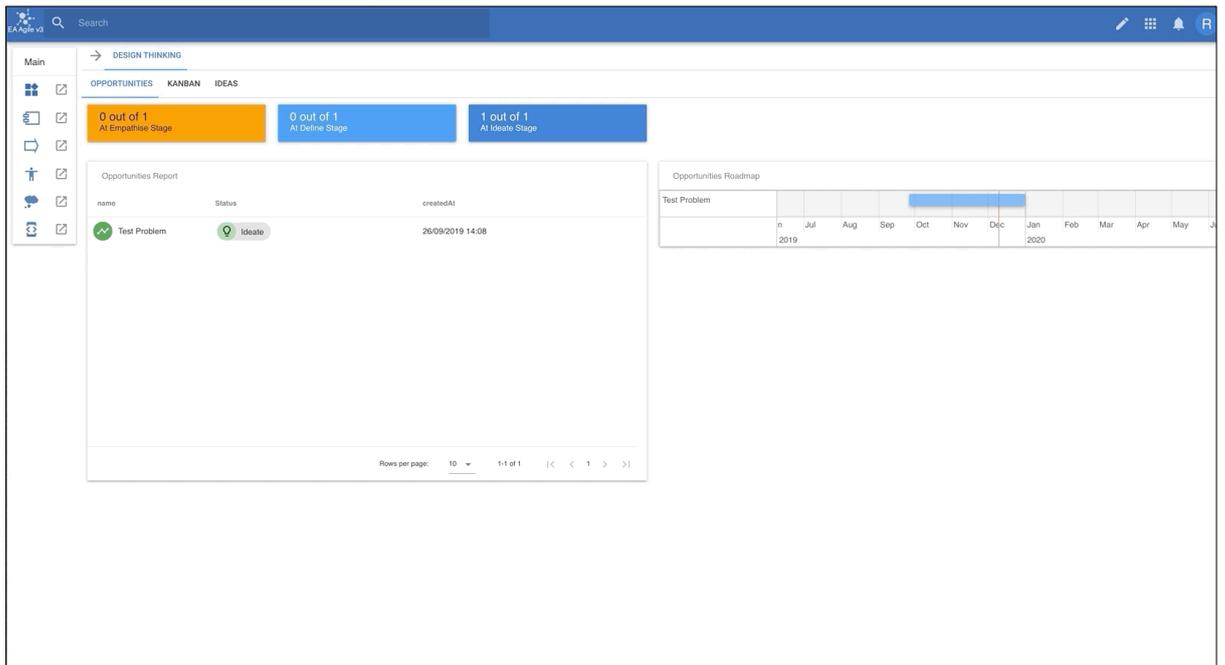

Open in Window' Click Behaviour

- You can configure a new Click Behaviour within the platform that enables a View to be opened in a floating window. These windows have multiple configuration options that allow for multiple to be present on-screen, size and if a floating window persists throughout the application. Windows can also be 'snapped' to the edges of your screen.

Rich-Hover

- In addition to the new Click Behaviour, you can now also configure an EA Agile v3 View to display within a tooltip on hover. These Views can take context from the object being hovered over. Any view type is supported within the new rich-hover feature.

New Styling Option 'Underscore'

- In addition to being able to set a Header Style for a view, users can now opt to underline the Header with 5 different color options.

Fixes:

- Date picker. The text size on AM/PM picker too small
- Cannot re-compute attributes for the context object
- Open in Dialogue not working with Diagram type View
- Cards content overflows
- Query table filter UI not showing
- Arrays don't work as grouping attribute

21st November - EA Agile v2 & v3 - Release 128

New:

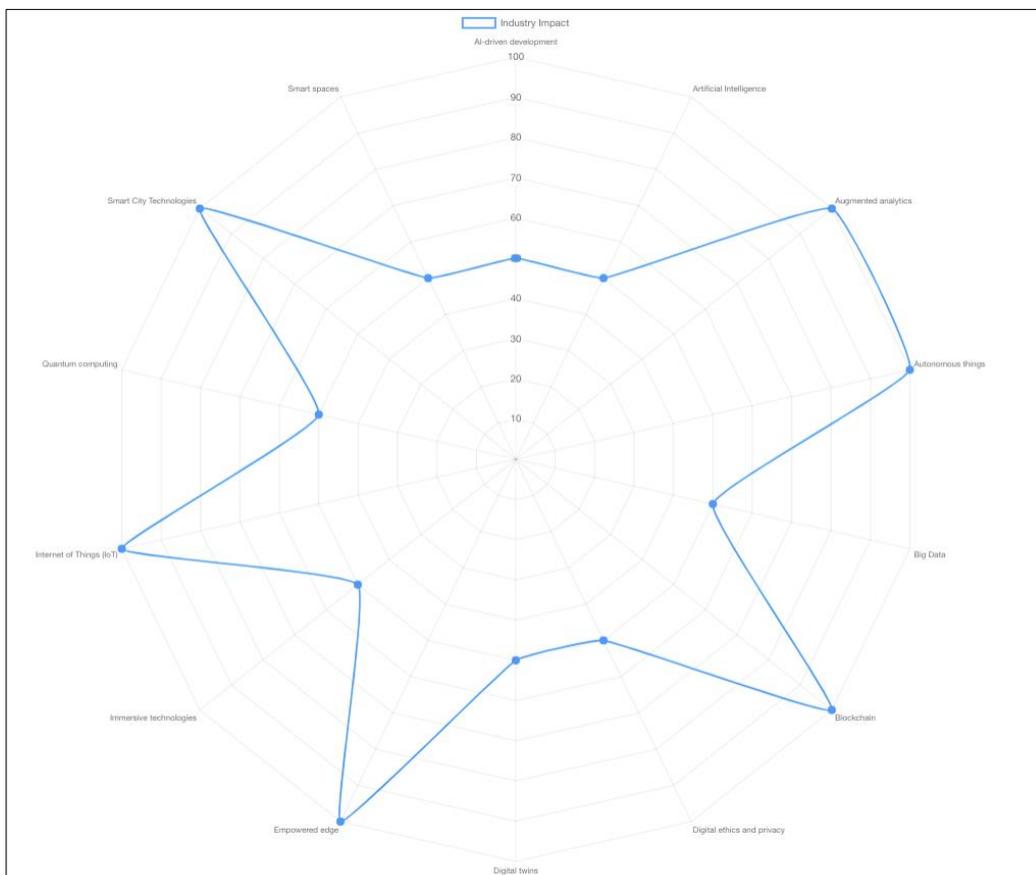

Upgrade to PHP 7.3

7th November - EA Agile v2 & v3 - Release 127

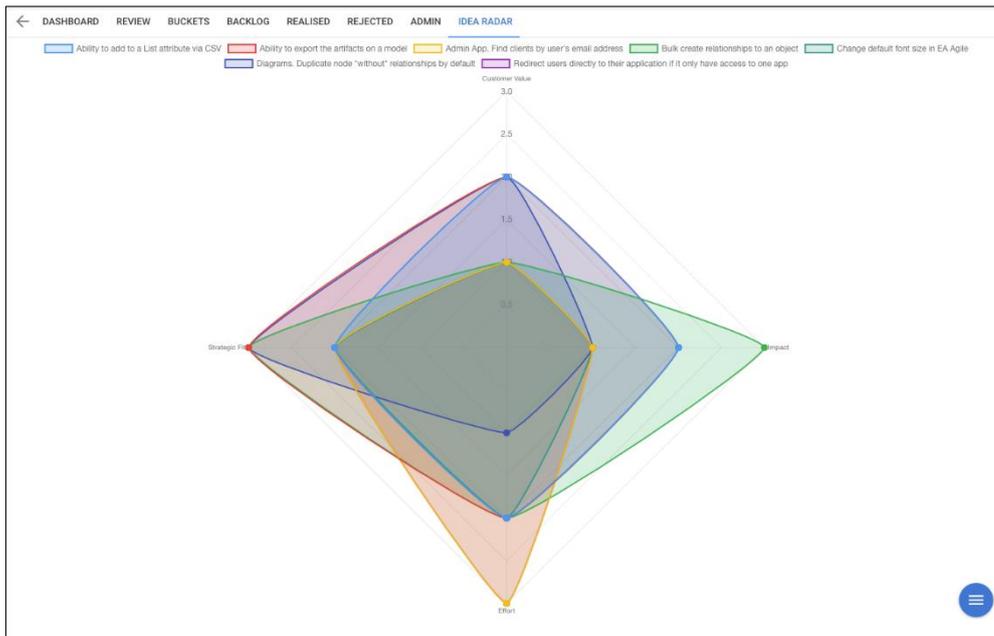

New:

Radar Charts

- There's a new chart type available in EA v3: Radar Chart. Users can utilize this new chart for either an object instance or a collection of objects.
- Users can also analyze objects in a number of different ways, either looking at a comparison of objects or it's attributes.

Here multiple objects are analyzed against an object attribute

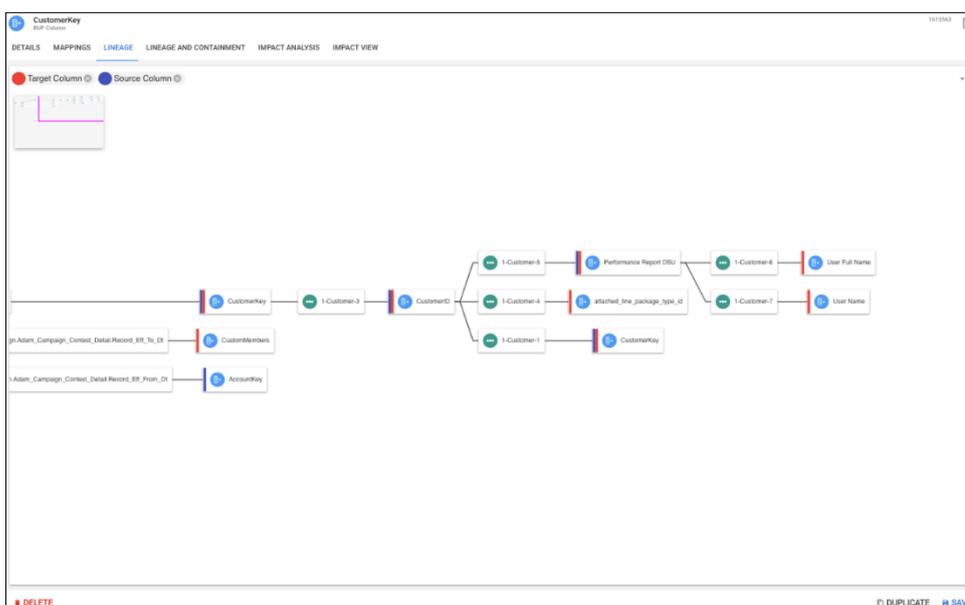

Here the object attributes are being analyzed for an object type

Image Attributes

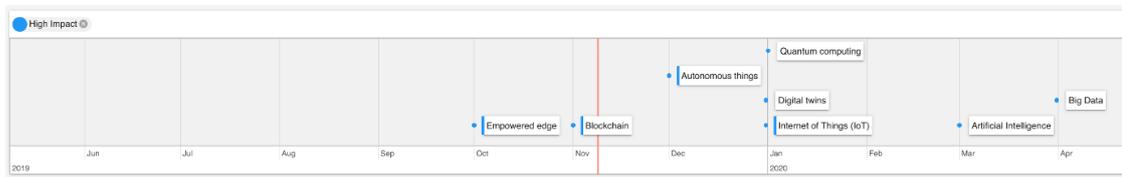

- We've added a new attribute type enabling users to upload images. For example, if you have a persona object type you can upload an image. Or if you have a location object, users could upload an image of that location.

Heatmaps/Overlay Filters on Diagrams & Roadmaps

- Users can now configure heatmaps and overlay filters in Diagrams, Auto-Generated diagrams and Roadmap View types.

An example of heatmaps being used to analyze objects in an Auto-Generated Diagram

Heatmaps being used in a Roadmap to highlight high impact technology trends

Open Panel fully extended

- New configuration option to set the "open in panel" behavior to open fully extended

Improved:

Computed Attributes within Query Tables

- Computed Attributes & Scorecard Attributes can now be used within our Query Tables

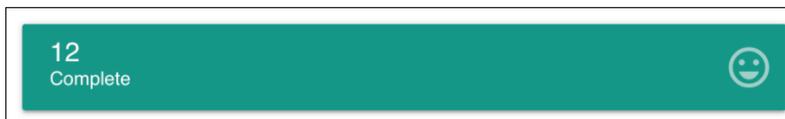

Configurable Tooltips now work with Tree Views

- Tooltip configuration has been extended to tree views. Users can set Object attributes to be displayed in a tooltip.

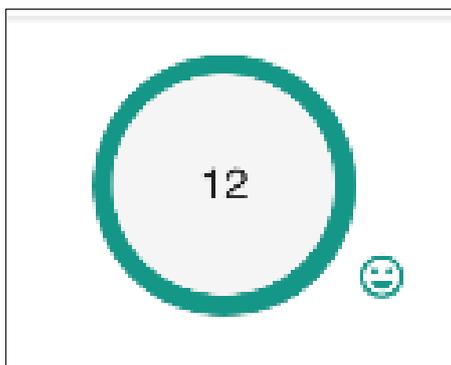

Updated style options for Count Views

- We've added configure options for the styling of Count Views. Users can now choose from a standard Count View, a card or a colored card.
- Count views can now also be used to display individual attributes of an Object Type

Colored Card

Standard Count

Standard Card

Fixes

- Filter UI won't load if an attribute is renamed/deleted
- Date pickers inside details views are cut off
- Users can use Array picklists in table views
- Inconsistent styling in details views
- Filter UI - equals/not equals operators disabled
- Global search description cut short

16th October - Platform v2 & v3 - Release 126.4

Fixes:

- Nested List Views. Item actions not working properly when hidden.

5th October - Platform v2 & v3 - Release 126.2

Fixes:

- Cannot create workspace after creating default element type view
- Nested List View - Breadcrumbs doesn't show display name
- Nested List View. Triggers context in inner levels when reloading
- Nested List View. Shows multiple selections when jumping in and out of levels
- Default View For Type no longer works if Object is extended
- Views not passing correct workspace ID down to child views

1st October - Platform v2 & v3 - Release 126.1

Fixes:

- CSV Import. Element attribute table insert has too many placeholders

27th September - Platform v2 & v3 - Release 126

New:

Computed Attributes (Roll-Ups)

- Roll-ups are an attribute type that allows data to be pulled in from related object attributes, and 'rolled-up' into aggregated values.
- Roll-up attributes can be dates, date-ranges or a numeric value. These values can be combined with scorecards to perform complex calculations.

The screenshot shows the configuration for a 'Total Application Cost' attribute. It is a 'Numeric Rollup' type. The relationship type is 'is associated with' and the object type is 'Application component'. The attribute definition is 'Application Lifetime Cost' and the aggregator is 'sum'. There is a filter section and a plus sign at the bottom right.

Configuration of a Numeric Roll-Up

Scorecard Attributes

- Scorecards can help users manage and evaluate metrics that can be applied to objects. With many objects, creating an automated score is the best way to calculate a value.
- Scorecards automatically appear as attributes within an object. Scorecards may be assigned to different object types.

Name	Total Cost
Description	Application Costs
Formula	+\$1+\$2+(12*\$3)
System Software Cost Rollup	\$1
Infrastructure Cost Rollup	\$2
Support Cost	\$3

Query Tables

- Our Tables now support a new advanced data source called 'queries', these queries allow users to advanced joins and filters so users can configure a table to not only display related objects but properties of those objects
- Users will be able to sort and filter on each individual column

Output of configuration

Improvements:

- Update to charts to include legends and tooltips
- All attributes & relationships added when creating 'default view for type'
- Filters can now be added to Relationship List Attributes

Fixes:

- EA v2 & v3: Reviewer context menu in Diagrams unable to select 'Go to diagram'
- XML Import error
- EA v2: Cannot attach communities to objects
- Scatter chart not rendering negative values properly
- Tree View misaligned icon, arrow and text

11th September - Platform v2 & v3 - Release 124.2

Fixes:

- Add option to enable users to match by name in XML Import UI
- EA v2: Objects with scorecard attributes not saving

2nd September - Platform v2 & v3 - Release 124

Fixes:

- Details inputs. Ensure read-only inputs have the same font size as editable inputs
- EA v2: Object import does not set createdBy id correctly.

30th August - DT: Major Release 9.0

erwin Mapping Manager Adapter

Pull Mappings and their attributes from erwin Mapping Manager with our new Web Services Adapter and use that data in other applications including the erwin suite*. Users can also bring across hyperlinks for specific Mappings for easy navigation.

erwin Metadata Manager Adapter

Pull data from Metadata Manager with our new Web Services Adapter and use that data in other applications including the erwin suite*.

(*erwin products must have DT Adapter)

CAST HighLight Adapter

- Domains can be read (Name, CHL ID) and used to update the source model, so to provide the context when creating new applications
- All application belonging to a parent domain and its subdomains will be read (Name, CHL ID) and used to update the source model, so to update applications in CAST
- Based on source data (Name, CAST HighLight ID, and the CAST HighLight ID of the Domain which the application belongs to are expected) the domain will be created (ID null or 0) or updated (ID equal to an existing CAST HighLight ID).
- Based on source data (Name, CAST HighLight ID, and the Name and CAST HighLight ID of the Domain which the application belongs to are expected) the application will be created (ID null or 0) or updated (ID equal to an existing CAST HighLight ID).

Fixes

- Languages other than English used an incorrect encoding
- SQL server authentication

30th July - Platform v2 & v3 - Release 123

Improvements:

Table View

- We've completely reworked table views so that they're more performant with larger data sets and tables displaying lots of related items. All the existing features of tables are still available and we hope to add more soon!

Fixes:

- EAv2: Make campaigns deletable again
- EAv2: Make campaigns icons visible again
- Remove prompt for a password when requesting an API token

28th June - Platform v2 & v3 - Release 122

New:

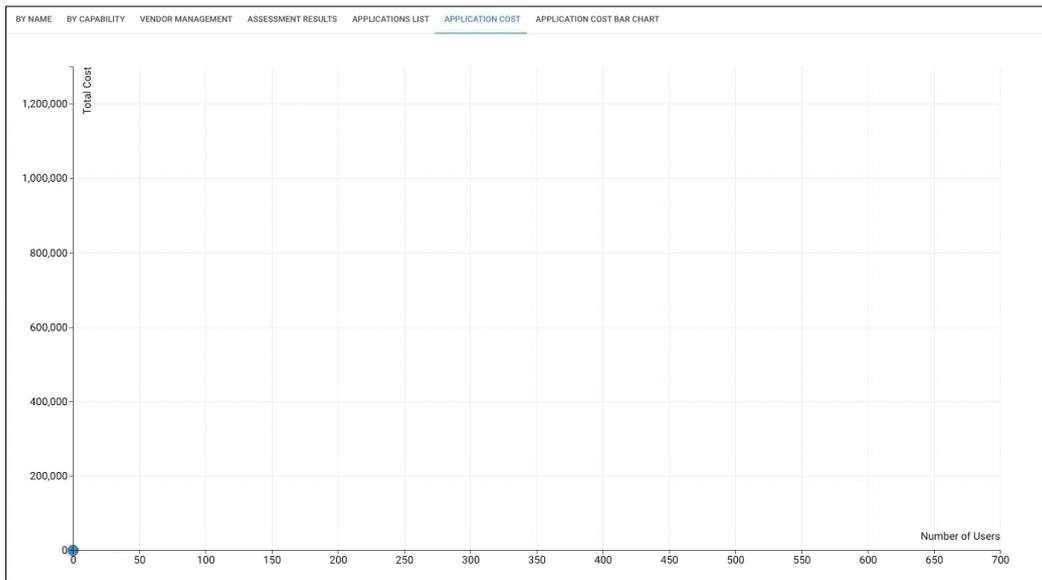

Long string attributes

- We've added a new attribute type 'Long String' for those attributes which require a little more detail.

Improvements:

Configuration option to allow scatter charts to start from 0

- Users can now choose between starting their scatter chart Axis at the lowest value in the range displayed or at '0'.
- A simple check-box has been added to the 'Scatter Chart Style' accordion in the Customisation tab in the view configuration

Fixes:

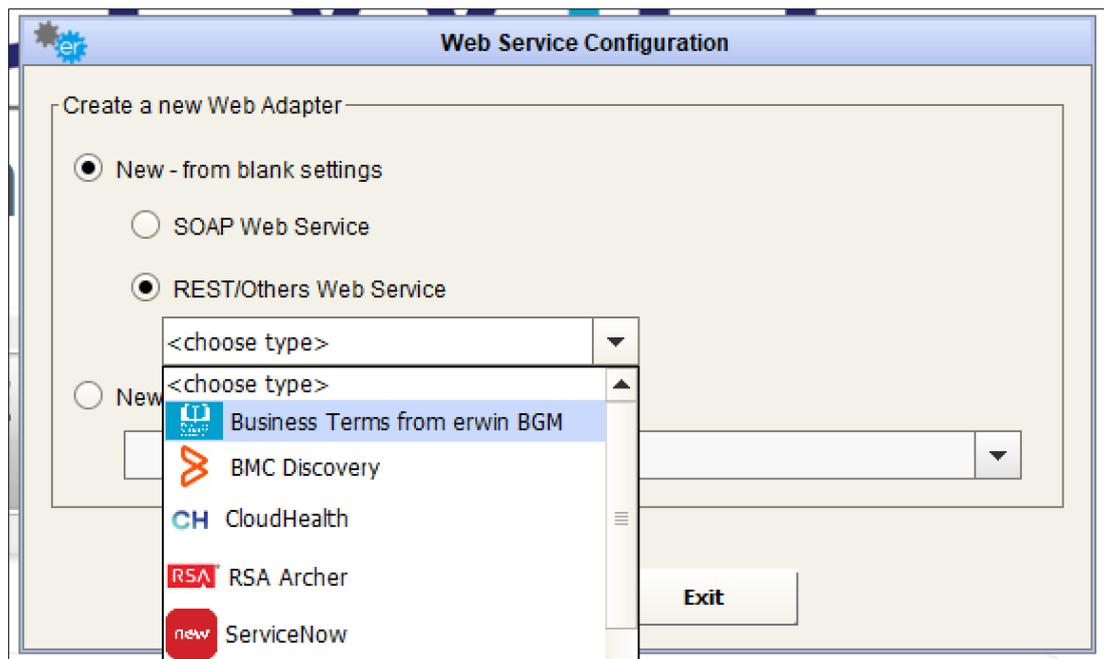

- CSV Import - update error "name already taken"
- Element out of state error on kanban shows 'element invalid toast'
- Import not importing relationship on new elements

28th June - erwin DT - Release 8.4

Major Release – v8.4

Integrate with erwin Business Glossary Manager

Push and Pull Business Terms from erwin Business Glossary Manager with our new Web Services Adapter and use that data in other applications including the erwin suite. Relate to Business Processes within erwin EA or connect your Business Terms to data in external applications such as ServiceNow

Encrypt/Decrypt Databases in erwin DT

Make your database more secure by encrypting it within erwin DT, you'll also be able to encrypt workflow configurations in the database and set/change encryption key.

Plus...

- We've added support for additional time-zones
- Application names have been updated
- Switched AdoptOpenJDK Java to Hotspot, from J9
- Added support for containment hierarchies in EA agile v3
- Improved performance for XSLX file processing

Fixes

- Fixed Date/Time range writing to EA agile v3
- Improved startup stability for services

-
- Numerical chars from Adapter name are omitted when selecting Adapter during WF creation

Security Fixes

- Command Injection vulnerability improvements
- Removed Trustmanager acceptance of specific certificates
- Fixed insecure randomness concern

13th June - Platform v2 & v3 - Release 121.2

Defects:

- Element types not updated on CSV export
- Export not showing "Failed" status if it fails

6th June - Platform v2 & v3 - Release 121.1

Defects:

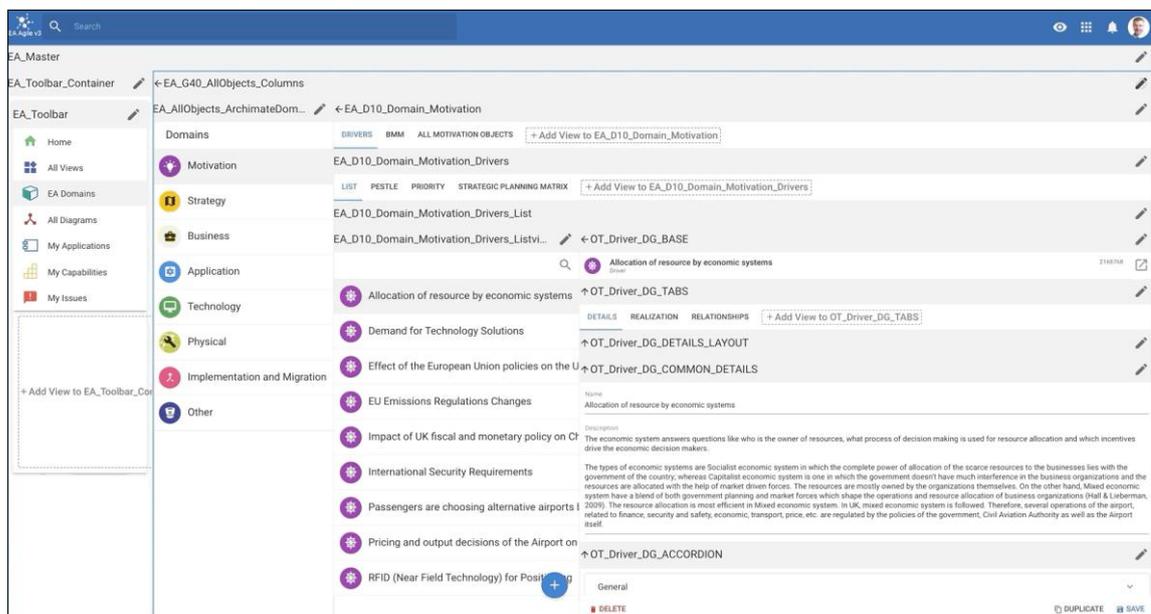

- Saving ER diagrams fails
- Element endpoint receives 500 error when modifying elements with communities
- Collection views inherit filter ID when no filter ID is defined but the journey is
- Export UI doesn't show until collection fetched
- Public facing version number not updated on release
- Duplicated views are added at the bottom of the View collection
- EAv2. Removing relationships from relationship list errors

3rd May - Platform v2 & v3 - Release 121

New:

Duplicate Views

- Whilst configuring our platform users can now duplicate a single view configuration or a layout which consists of many views. This will save a considerable amount of time when configuring the platform allowing re-use of views and layouts.
 - All configuration settings are duplicated: data sources, attributes, etc...
 - Users are prompted to add a prefix for the newly duplicated views

Export Management Area

- Users can now manage exports through the system menu, allowing you to create bulk exports, check the status, and access a report of all exports in one area.
 - Email notifications now include a link to the new export management area rather than attaching the file.

Exports			
Created Date	Creator	Status	Download Link
31/05/2019 13:30	 Richard Worrell	 Completed	Download
31/05/2019 13:30	 Richard Worrell	 Completed	Download
31/05/2019 13:30	 Richard Worrell	 Completed	Download
31/05/2019 07:04	 Christopher Spring	 Completed	Download

Defects:

- Error when changing Communities on a View

16th May - Platform v2 & v3 - Release 120

Defects:

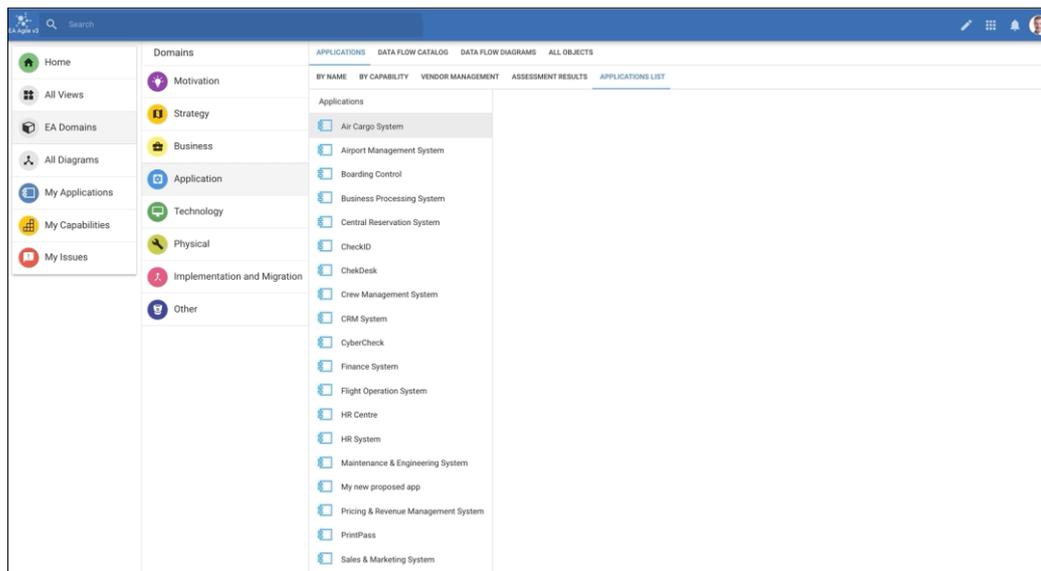

- EA v2: Kanban not showing attributes with empty values
- Data Source defect on Views
- Diagramming: Blurred text in a text box
- Import doesn't import date ranges (allowing use with erwin DT)

3rd May - Platform v2 & v3 - Release 119

New:

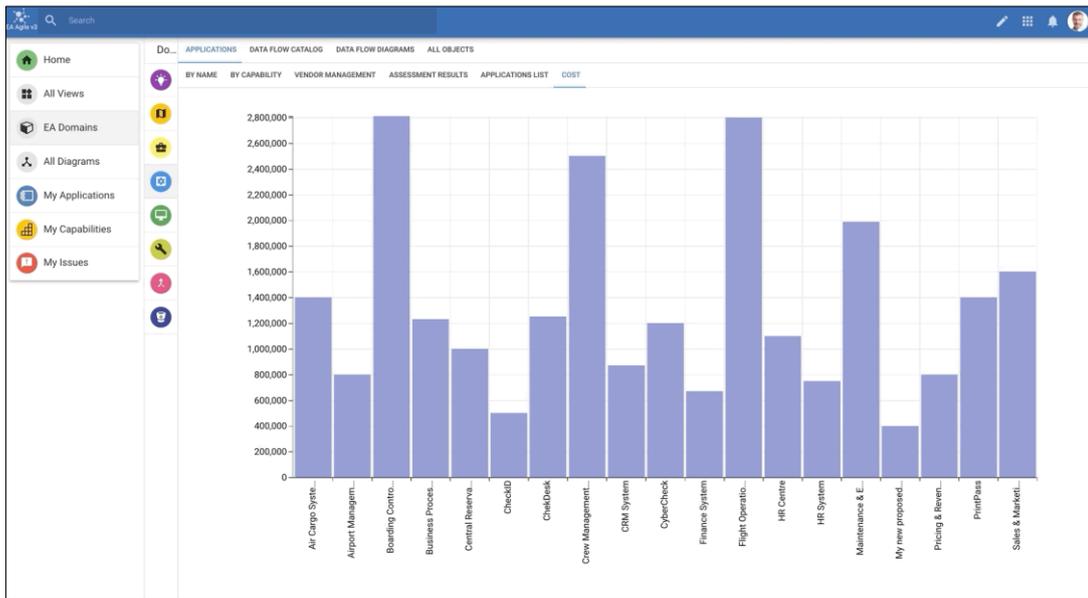

Nested List View

- Our latest View type allows users to configure 'levels' on a list view
 - Each level is configured using the filter system
 - Context is used to allow users to traverse their metamodel in the new view
 - We've also updated the styling to differ from our regular List View

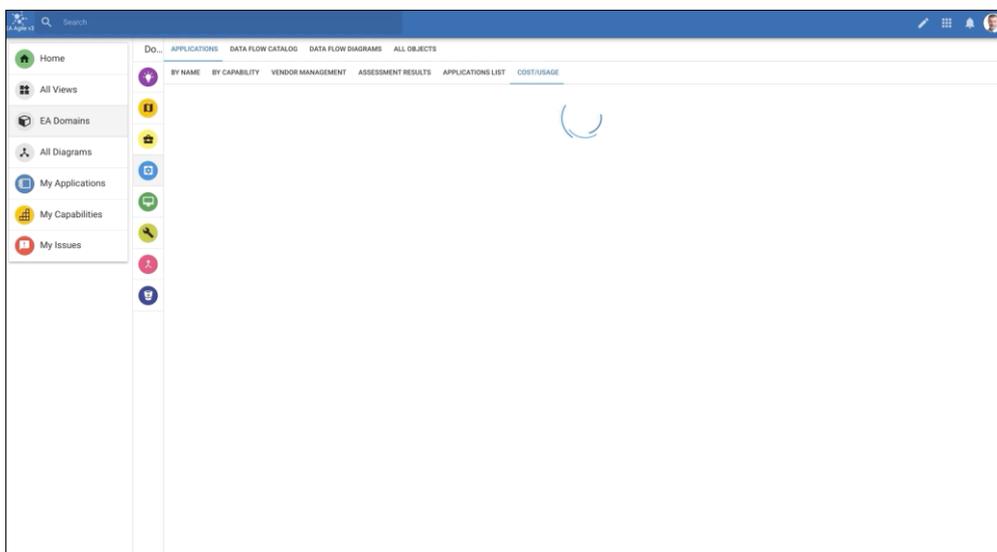

Stacked Bar Chart

- Users can now represent Objects and Attributes through Stacked Bar Charts. Below is a simple example showing the total cost of ownership, but users can configure multiple Y values.

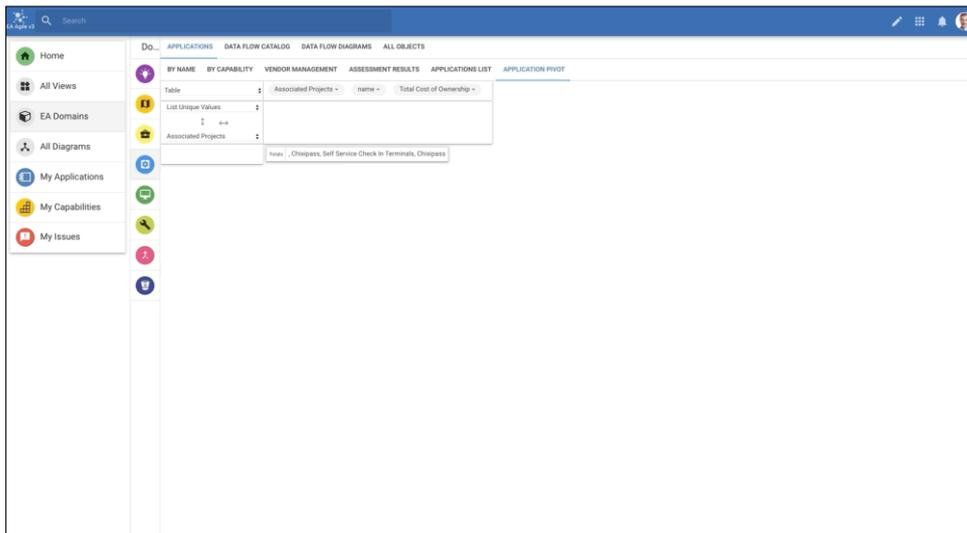

Scatter Chart

- Objects & Attributes can also now be represented in our new Scatter Chart, allowing users to configure an X & Y axis. Below is an example showing users & cost, as well as using shapes to highlight which Objects are owned by me.
 - Use filters to set up to 5 different shapes within a Scatter Chart

Pivot Table

- The new pivot table provides the ability to slice and dice your objects by their attributes.
- Drag and drop the attributes from the column or the row headers to create your pivot table.
- Clicking on the drop-down arrow next to an attribute will allow you to filter by the values of the attribute.

Filter Parameterisation

- Parameters can now be set on Filters, these include: String, Boolean, Number, Date Time, Object, User & String List

Export As Report

- We've added a new Action button in Views to allow you to export a more user-friendly 'report' than our standard CSV export. Rather than using Object ID's for related objects users will now see Display Names.
- The new Report will also by default only download what is configured to be displayed within the View e.g. Columns within a Table View or contents of a List View.
 - Additional Attributes can be configured to be downloaded, this is set up at the View configuration level.
 - Overlay filters are taken into account so only Object Instances on display are downloaded

Fixes:

- EA v2: Intermediate blank fields when filtering the table column with many duplicates
- Import/export actions can be added when not appropriate
- Table not loading when using Journeys
- Export action not working properly with journeys in tables

26th April - Platform v2 & v3 - Release

118.1

Fixes:

- ActionBar location not displaying Actions
- Colour defect with denominator in Count View Type
- Export settings not working

11th April - Platform v2 & v3 - Release

117.3

Fixes:

- Item Actions not working Tree Views
- Trees renders ad infinitum with recursive journeys
- CSV Import not processing existing namespaced elements correctly
- Object export is cutting off relationships when there are too many
- EAv2: Unable to toggle between workspaces and the "Default" workspace on the drop-down list

3th April - Platform v2 & v3 - Release

117.2

Fixes:

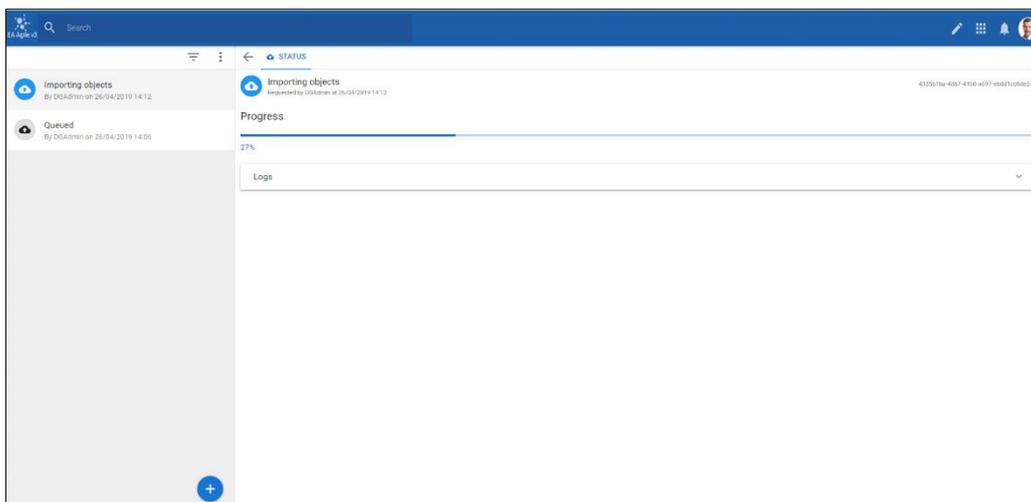

- Contributor users cannot see import/export actions in DGC

25th March - Platform v2 & v3 - Release 117

New:

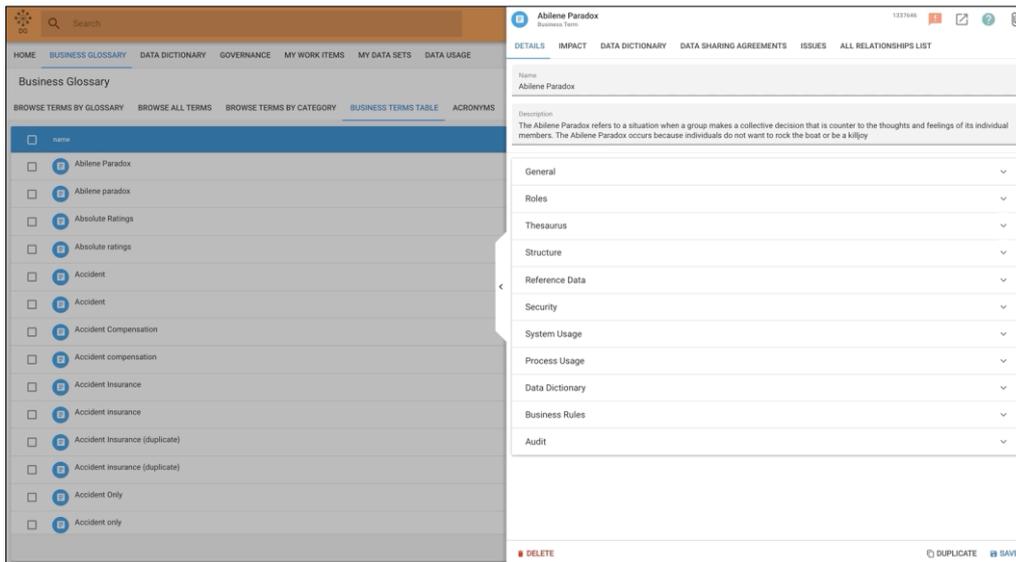

Import

- We have re-architected our Import to be more reliable and handle greater volumes
- A new Import section is accessible through the System Menu.
 - Users are able to track the percentage completion of each import and see what stage it's at
 - A list of all imports (including those already completed)
 - Access reports of an import including any errors

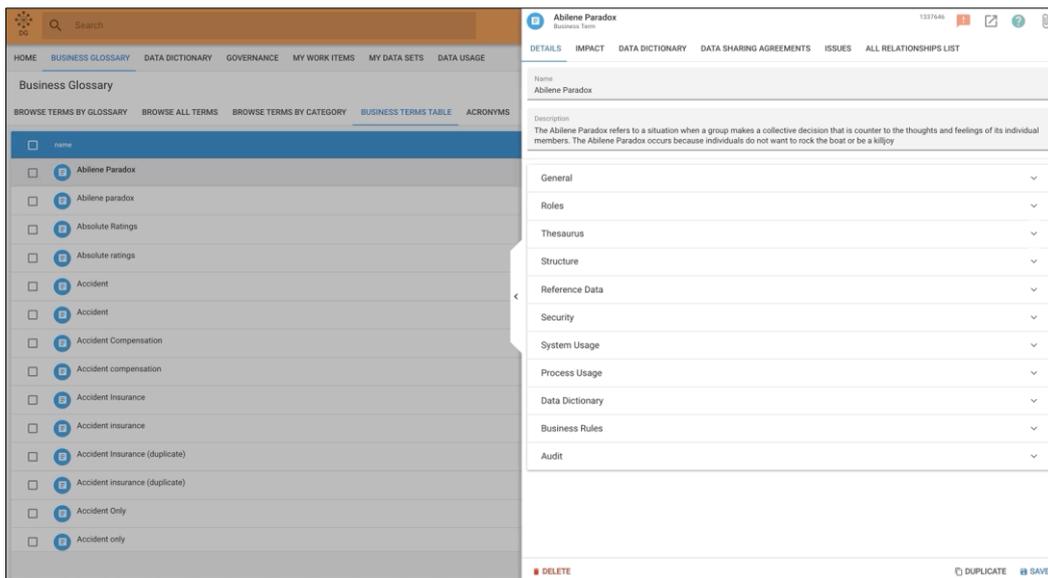

Object Attachments

- Users are now able to add file attachments to Object instances. This is done through a new 'Action' called Attachments

Tooltip Configuration on Pick Lists

- Set an attribute to be displayed within the tooltip on object pickers

Fixes:

- Object export breaks with current user filter
- Import/Export actions are not hidden when a user only has a Review license
- EAv2 Views. Render colours for Array attribute values
- EAv2 Views. Icon Color on Diagrammer

8th March - Platform v2 & v3 - Release 116.3

Fixes:

- Journey tree construction not handling recursive paths
- Equals operator can't find diagram types by names

5th March - Platform v2 & v3 - Release 116.2

Fixes:

- EA v2: Saving relationships shows wrong error messages
- Export not exporting all objects in the view
- Global search results can't be opened in all views
- Timezone miscalculations when using different offsets

1st March - Platform v2 & v3 - Release 116.1

Fixes:

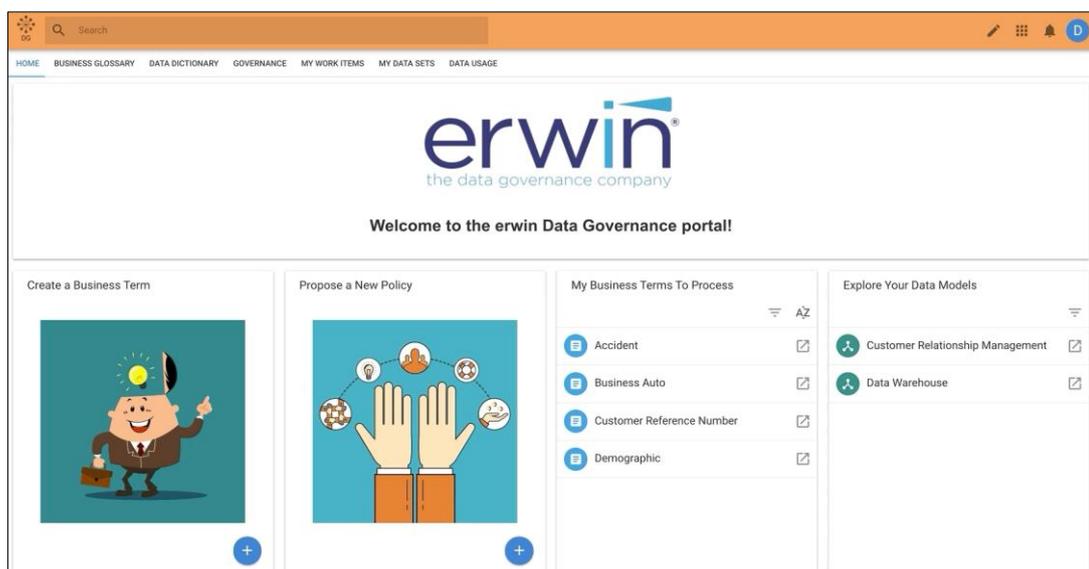

- EA Agile: Block delete option from appearing in attributes if the user is a reviewer
- EA Agile: Diagram Import returning random offsets
- Display Attribute picker not working on kanbans
- Lineage Automatic Diagrams mapping issues with duplicated nodes

11th February - Platform v2 & v3 - Release 116

New:

Ability to sort on List, Tree & Kanban views

- We've added a **sort** action for List, Tree & Kanban views which will allow the user to sort on strings (A-Z), date values, and integers

Tooltip Configuration

- Users can configure attributes to be displayed as a tooltip in Tree, List & Kanban Views

The screenshot shows the 'Business Glossary' page in a web application. The page has a navigation bar with links for HOME, BUSINESS GLOSSARY, DATA DICTIONARY, GOVERNANCE, MY WORK ITEMS, MY DATA SETS, and DATA USAGE. Below the navigation bar, there are tabs for BROWSE TERMS BY GLOSSARY, BROWSE ALL TERMS, BROWSE TERMS BY CATEGORY, BUSINESS TERMS TABLE (selected), ACRONYMS, REFERENCE DATA, DIAGRAMS, and REPORTS. The main content area displays a table with columns for 'name' and 'Status'. The table lists various terms such as 'Abilene Paradox', 'Absolute Ratings', 'Accident', 'Accident Compensation', 'Accident Insurance', 'Accident Insurance (duplicate)', 'Accident Only', 'Accident Only or AD&D', 'Accidental Bodily Injury', 'Accidental Death & Dismemberment', 'Account', and 'Accumulation Period'. The status for most terms is 'Approved', while 'Accident' is 'Candidate'. The table also includes checkboxes for each row and a search icon in the top right corner. At the bottom right, there is a pagination control showing 'Items per page: 25', '1-25 of 707', and 'Page: 1'.

name	Status
Abilene Paradox	Approved
Absolute Ratings	Approved
Accident	Approved
Accident	Candidate
Accident Compensation	Approved
Accident Insurance	Approved
Accident Insurance (duplicate)	Approved
Accident Only	Approved
Accident Only or AD&D	Approved
Accidental Bodily Injury	Approved
Accidental Death & Dismemberment	Approved
Account	Approved
Accumulation Period	Approved

Improvements:

Export

- We've re-architected our exporter so that it is more performant when handling large exports. The re-architecture also allows us to continue making further improvements and add new functionality

Fixes:

- EA Agile: Pivot table printing not functioning correctly
- EA Agile: Colours missing from bookmarks in the menu
- XML Import not working

11th February - Platform v2 & v3 - Release 115.2

Fixes:

- Table: Object icon disappearing
- Lineage diagram fails to render
- EA Agile: No icons rendered in publications and font is different

21st January - Platform v2 & v3 - Release 115.1

Fixes:

- Execute Filter and Count endpoints not returning correct data set

16th January - Platform v2 & v3 - Release 115

Improvements:

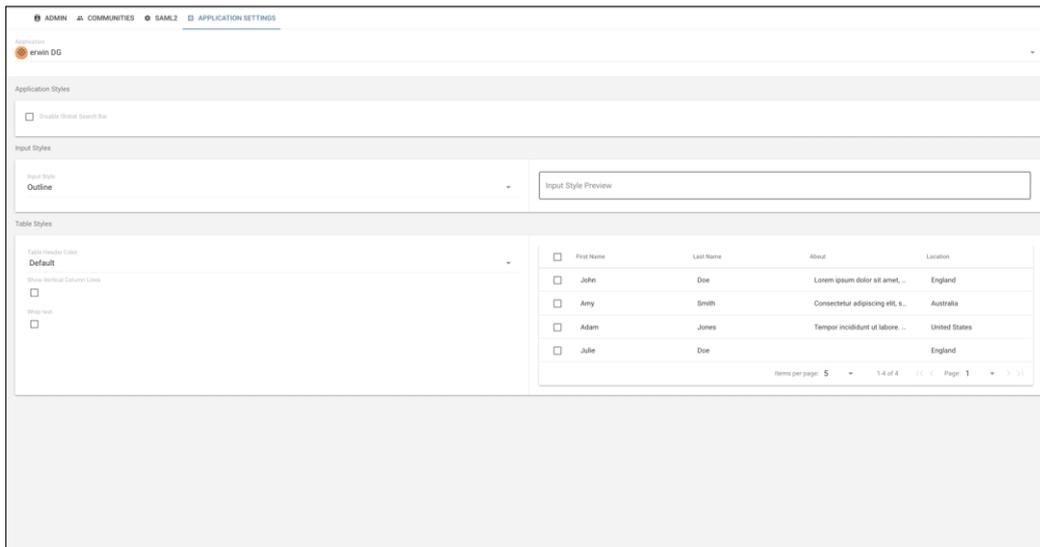

SAML2

- Using a simple Token based system users will now be able to use our web API when using SAML2. Users will now be able to find their API key in the Account > Admin section.

Global Configuration Options

- In our recently released Application Settings users will now be able to configure the style of all tables within an application

Filters

- We've improved the performance of filters that use a relationship
- Filters that use relationship-based criteria now use 'Contains' rather than 'Equals'

Fixes:

- Details view grey background not really grey
- View navigation not working
- Filters. Extremely slow when using relationships
- Views. Tree heatmaps not being applied
- Element CSV export errors when exporting a Scorecard attribute
- Emptying numeric value from Details View input doesn't clear it
- EA Agile: Publishing Pivot Tables & Roadmaps doesn't work
- EA Agile: Element Type module doesn't show success toast on save and re-renders on change

19th December - Platform v2 & v3 - Release 114.1

Fixes:

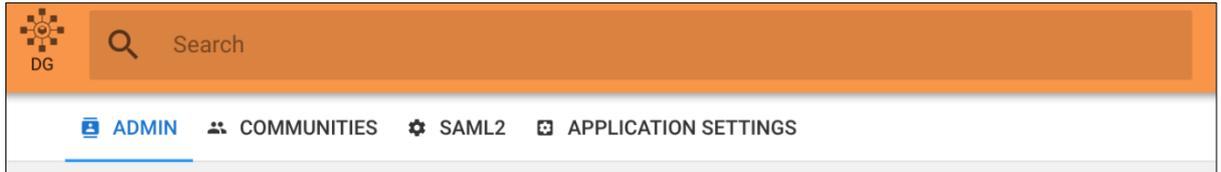

- Fix forgot username/password page styling

18th December - Release 114

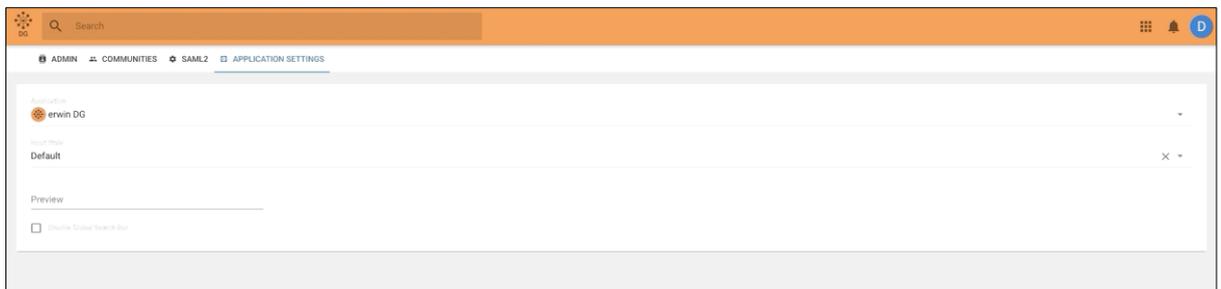

New:

Global Configuration Options

- As part of this Release, we are adding a new tab "Application Settings' to the Account section.

- Within this tab, you will find configuration settings allowing you to customize your entire application environment. You can choose from the Applications you have licenses for. At the moment we only have two configuration options (Input Box Style & Search Bar Visibility) available but we will be adding more.
- When you select an Input Style it will be applied to all Views within the Application, you will receive a notification informing you of your choice.

Improvements:

Text Wrap within Table View

- Carrying on from the addition of the Table Style tab within a Table Views configuration panel we now have now added the ability to switch on Text Wrap within a table

A screenshot of a table view with columns for 'Part of glossary', 'name', 'description', and 'Status'. The table contains several rows of data, including 'Abilene Paradox', 'Absolute Ratings', 'Accident', 'Accident Compensation', 'Accident Insurance', and 'Accident Only'. The text in the 'description' column is wrapped to fit within the table cells.

Part of glossary	name	description	Status
Human Resources	Abilene Paradox	The Abilene Paradox refers to a situation when a group makes a collective decision that is counter to the thoughts and feelings of its individual members. The Abilene Paradox occurs because individuals do not want to rock the boat or be a killjoy	Approved
Human Resources	Absolute Ratings	A rating method where the rater assigns a specific value on a fixed scale to the behavior or performance of an individual instead of assigning ratings based on comparisons between other individuals.	Approved
Insurance	Accident	an unexpected event or circumstance without deliberate intent.	Approved
Insurance	Accident		Candidate
Human Resources	Accident Compensation	The Accident Compensation Corporation.	Approved
Insurance	Accident Insurance	insurance for unforeseen bodily injury	Approved
Insurance	Accident Insurance (duplicate)	insurance for unforeseen bodily injury	Approved
Insurance	Accident Only	an insurance contract that provides coverage	Approved

Fixes:

- Prevent diagram background turning black in fullscreen mode
- Application settings errors if none already exist
- Dfp inputs have the wrong font when the input is editable
- Input Style under 'form style' in details layout but under 'styling' in others. Misleading
- Notification dropdown "Show All" blue
- Publications. Not migrating all publications
- Table sorting shows table is sorted, but data is not actually sorted
- Publications container class has a margin
- Make clear action work on numeric values
- Don't make detail views re-render when data changes
- Element Type UI. Inform user to refresh when "state out of date" exception occurs

5th December - Release 113.1

Fixes:

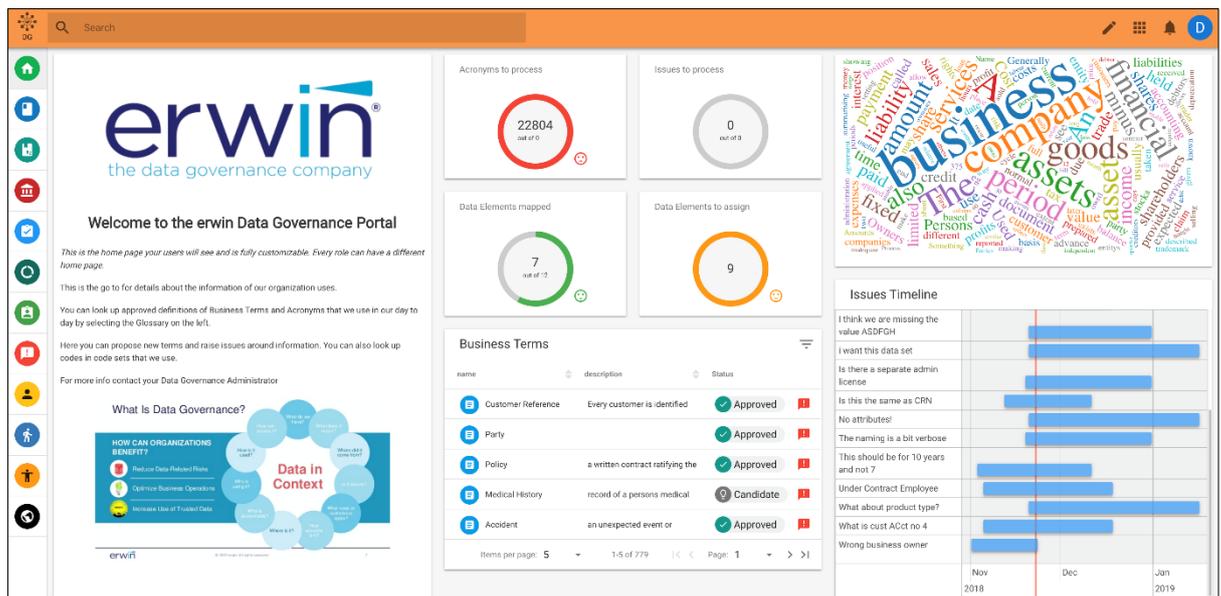

- Show drop-down when label clicked

3rd December - Release 113

New:

Views Displayed on Cards

- Within a column view, users will be able to choose if they wish to display the View(s) contained within on a card. This capability is great for creating dashboard style views or drawing focus to a particular section of a view

Styling Options on Table Views

- Continuing on the theme of improving the UI on our platform we've also made a number of improvements to our Table View. Within the configuration options, users can now set Table header colors, set vertical lines between columns and brought the view up to the latest material design standards. Below is an example of a table view with our new options switched on;

Part of Glossary	name	description	Status
Human Resources	Ablene Paradox	The Ablene Paradox refers to a situation when a group makes a collective decision that is counter to the thoughts and feelings of its	Approved
Human Resources	Absolute Ratings	A rating method where the rater assigns a specific value on a fixed scale to the behavior or performance of an individual instead of	Approved
Insurance	Accident	an unexpected event or circumstance without deliberate intent.	Approved
Insurance	Accident		Candidate
Human Resources	Accident Compensation	The Accident Compensation Corporation.	Approved
Insurance	Accident Insurance	insurance for unforeseen bodily injury.	Approved

Insurance	Actuary	business professional who analyzes probabilities of risk and risk management including calculation of premiums	Approved
Insurance	Adjuster	a person who investigates claims and recommends settlement options based on estimates of damage and insurance policies held.	Approved

New Style Options for Input Boxes

- Within a Details View you will be able to choose from 4 different styles off input boxes

Default

Outline

 840 x 66

Solo

Box

Fixes:

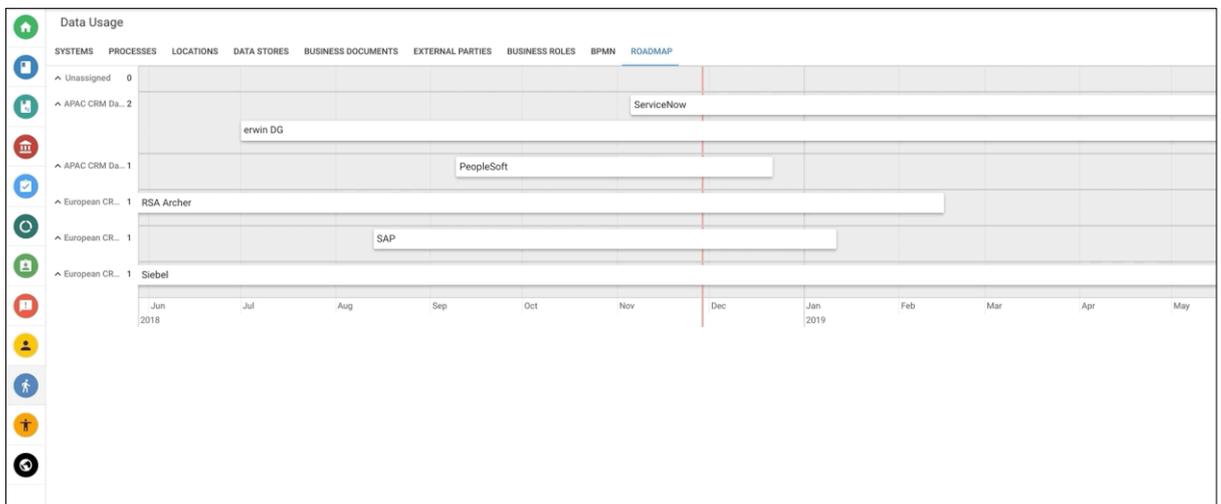

- View manager. No, add header action when no views
- Table column delimiters not moving together when a user moves one
- Table header sort icon ellipsis issue
- Top right menu action overlaps heatmap arrow
- Validation errors in details show a red box
- Table header background colour doesn't cover right side when scrollbar present
- Enumeration/Relationship label styling suggests there's a value when there isn't

26th November - Release 112

Improvements:

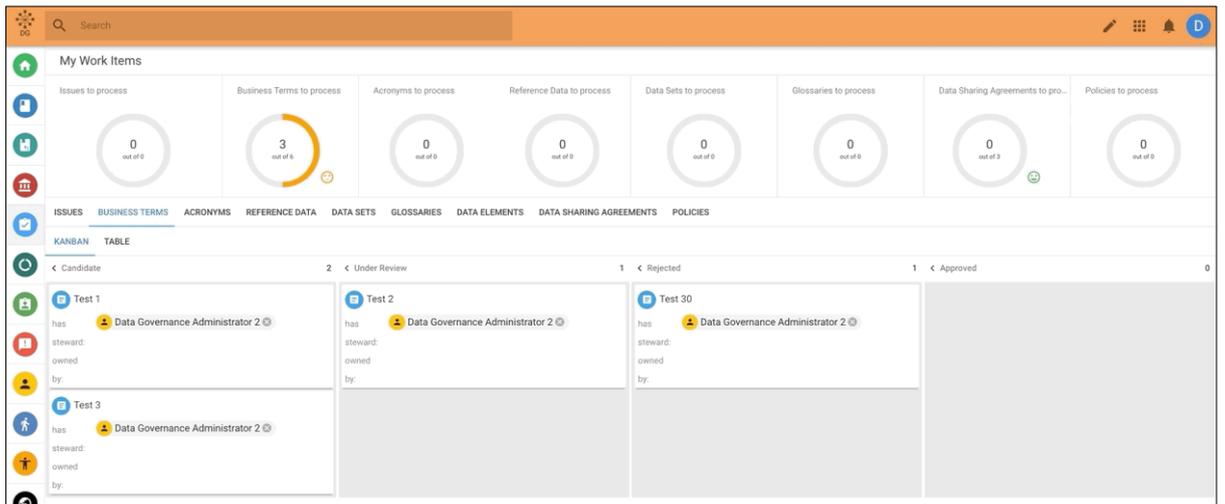

The Roadmap View

- Finishing off our recent set of improvements to the Roadmap View we've added the capability to collapse and expand lanes within a grouped roadmap

The Kanban View

- We've also extended the collapse/expand behavior to our Kanban View

CSV Import

- Over the last month, we've been working on improving the performance of our CSV import. You will notice an improvement in both the speed of an import and volume of entities the import can handle

Fixes:

- Description Length Invalid hard error
- Views. Delete confirmation doesn't handle errors
- DM XML Import. Data model duplicates when trying to merge
- Views: Roadmap and Kanban collapsed state reset when groups are reordered

13th November - Release 110

Improvements:

The Roadmap View

- Continuing on from our work in previous releases we've added more features to the Roadmap View. If a user selects to group by an attribute they are now able to re-order lanes by 'drag & drop'.

- If a user selects to display using one element per line they can configure the column width for the element name on the left.

Grouping

One Element Per Line

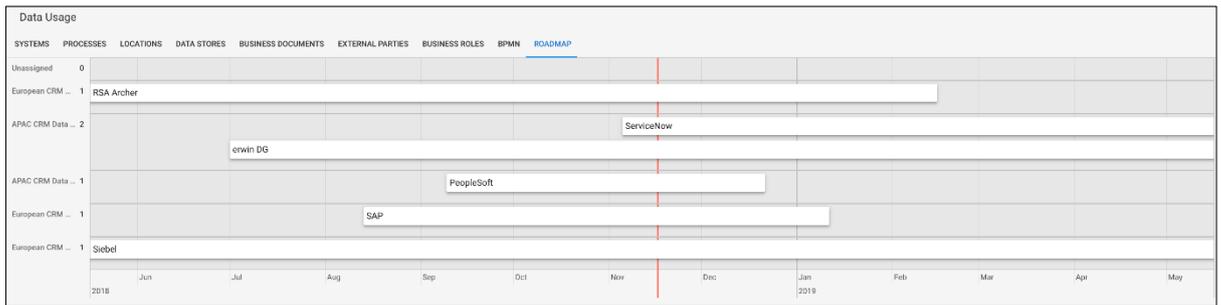

Label width

200

- Tooltips with date information now show on hover over ranges and dots.

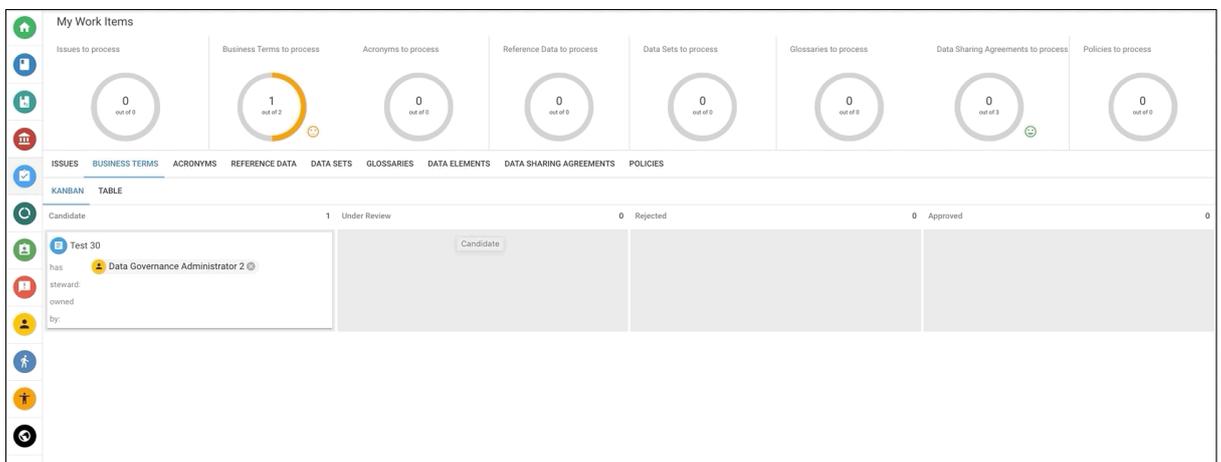

- Finally, if a user chooses to group by an attribute they can now choose to display only using one master timeline rather than one for each group

The Kanban View

- Reordering lanes are now also available within the Kanban View, this can be done by dragging and dropping a lane.

Fixes:

- Views: edit dialogues overflowing page can't be used
- MMF. String attribute length validation not performed
- Views: Tables show half spinners within cells
- Views. Object selection. Funky behavior with input focusing
- Views. Elements opened from collection views in the panel not up to date
- MMF. Element fetch hard erroring for DG Trial
- Views: Roadmaps display old groups when new grouping attribute is applied.
- Filter state out of date exception updating an Element Type
- Filter state out of date updating filter
- Views: Roadmaps: Relationship list attributes calling a non-existent function
- Views: Kanban: Errors when one axis has no grouping defined
- Views: Kanban grouping: can't set just y grouping
- Views: View editing causes re-render of view
- EAv2: Bulk Actions > Object delete is broken
- Communities. Cannot remove first assigned admin
- Views: slider option is available in edit form for roadmaps
- Views: Roadmaps and Kanbans show drag cursor when sorting is disabled
- Views: Edit mode not propagating to elements accessed by global search

-
- Views: Panel on top of the panel is acting wonky in global search
 - Views: Table view. Table size changes not working

1st November - Release 109.3

Fixes:

- Views: list taking context from itself

26th October - Release 109.2

Fixes:

- Views. Kanban configurable icons not displaying
- Views. Tabs not leaving space for resize arrow

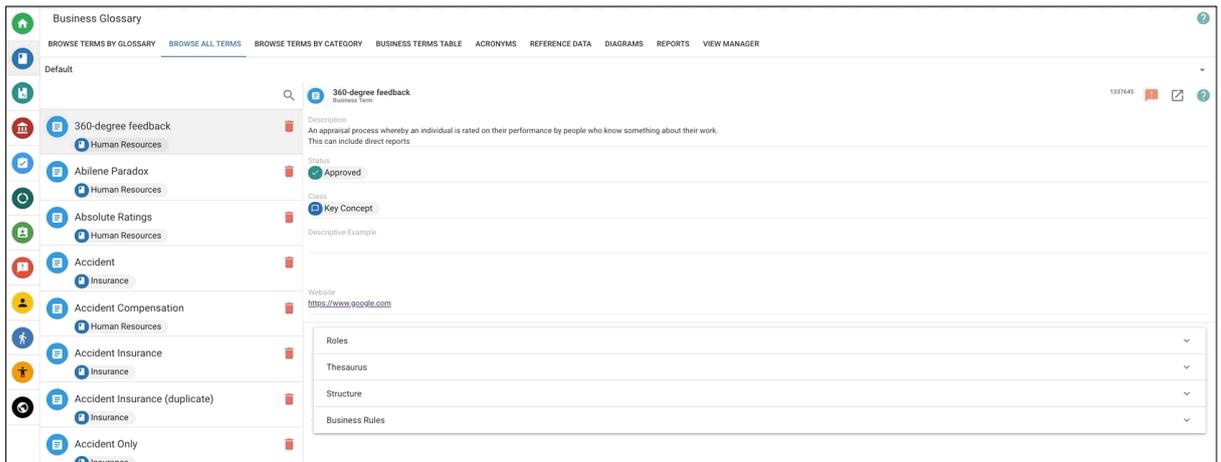

25th October - Release 108.1, 109, 109.1

These releases see the introduction of a completely new feature and a huge upgrade to another. Conditional Views are a new concept for the platform, you'll be able to set a filter to a view so that it only appears when a defined criterion is met, this will be available for all Layout type views. We've also been working on improving the Roadmap View over the last month (and there's more to come). Lots of new features have been added to Roadmaps, opening up a whole host of configurable options. We're looking forward to seeing what our users do with these updates so please tell us how you've been using Roadmaps & Conditional Views through our community: <https://community.erwin.com/>

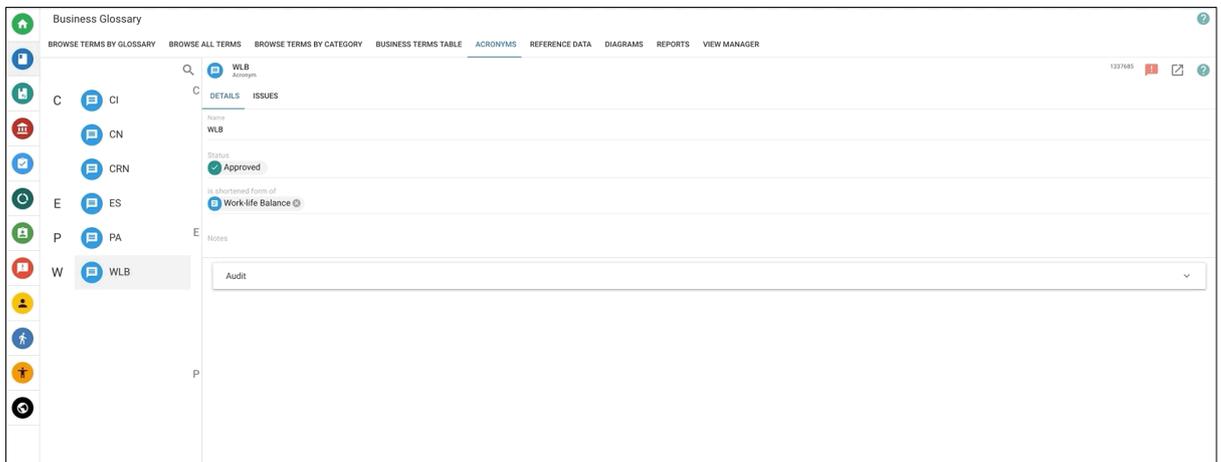

New:

Conditional Views

- An exciting addition to the platform allows users to configure the conditions in which a View will appear, this is done by defining a filter. In the example below, we have set an additional accordion tab to only appear if a business term is GDPR critical. With the highly configurable nature of the Platform, the possibilities are endless with this new feature.

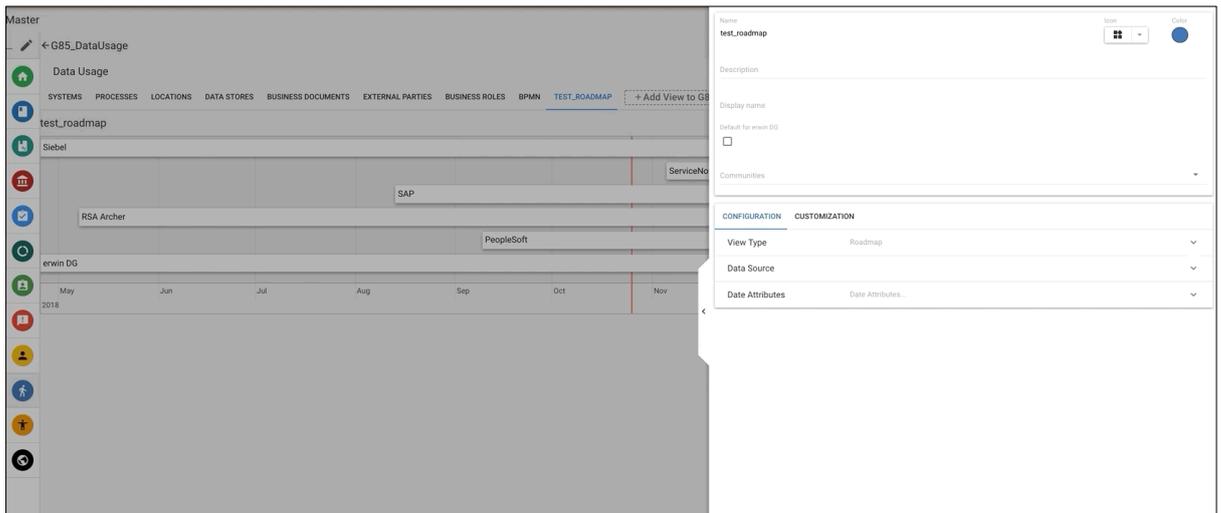

- Another example using Acronyms that are related to GDPR critical business terms, adding an additional Tab View.

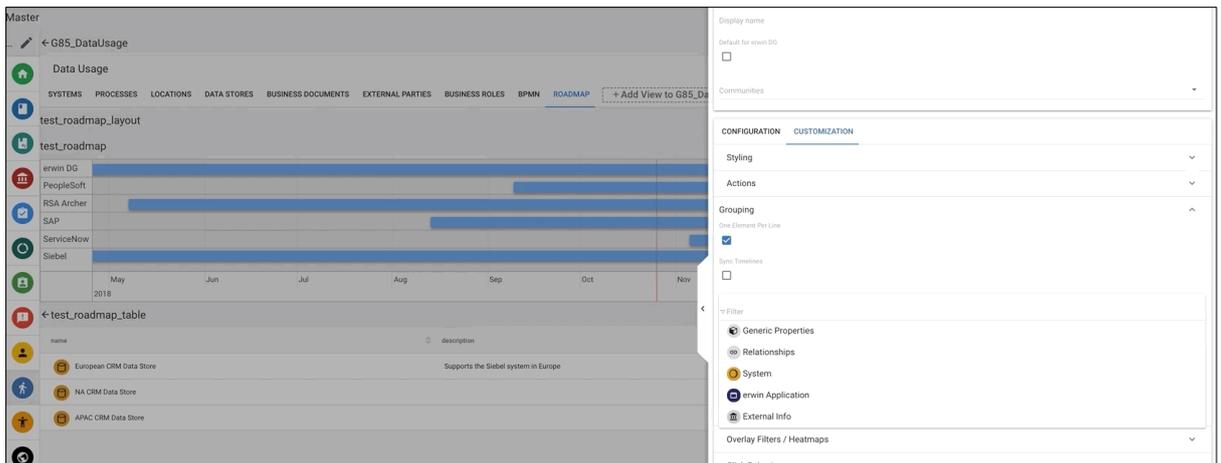

Improvements:

The Roadmap View

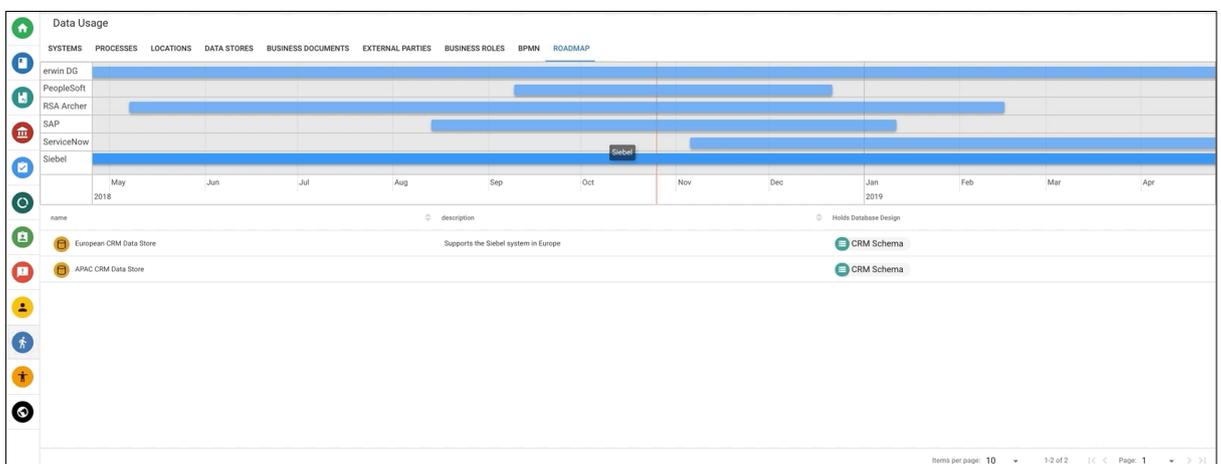

- First up we have a new feature for the Roadmap View where a user can select to display elements 'one per-line'. This will change the appearance of the Roadmap and add a splash of colour! Users will still be able to edit elements in the Roadmap in the traditional way in this mode.

- Elements can also be grouped by a Grouping Attribute & users can also sync the multiple timelines on display so you can scroll through in sync if you wish.

- Click Behaviour can now also be set on the elements within a Roadmap. This opens up a whole host of possibilities for the user when configuring views. Below is an example of a table taking context from the System selected in the Roadmap above.

-
- Finally, single dates are now displayed as a dot rather than a box. Stay tuned for further updates to Roadmaps in the next release.

Fixes:

- Views. Count views with journeys error on the backend
- Views. Default Element Type View is editable
- Filters. Filter using a specific relationship to another Filter returning nothing
- Rows layout: Change the number of rows gives the wrong number of row size inputs
- Diagramming. Grid size 0 causes a hard error
- Views: table not storing page size properly
- Views. Object selection. Funky behavior with input focusing
- Views. Table returning all objects
- Views. Clicking on Tabs closes panels
- Views: Can't configure click behavior
- Views. Count view just spins when no Filter/Journey defined
- Views. Kanbans blow-up - property of undefined

15th October - Release 108

Improvements:

The Roadmap View

- We've updated the Roadmap View on the platform to support date ranges, users will also be able to edit date ranges through drag & drop. Keep an eye on our updates page as we continue to improve the Roadmap view on the platform!

CONFIGURATION CUSTOMIZATION

View Type Roadmap

Data Source

Date Attributes

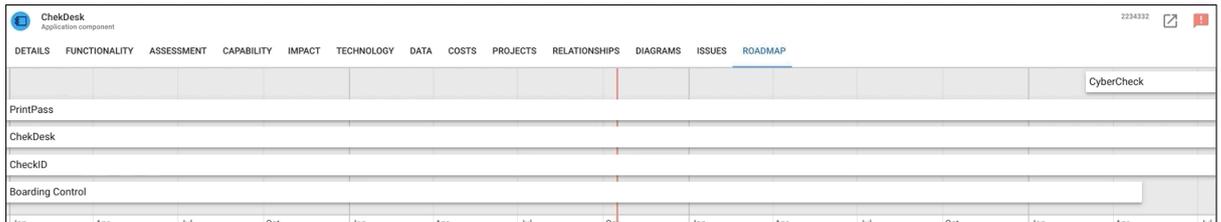

Roadmap Configuration Attributes

Element type Application component Editable

Start date source attribute Lifecycle - Live Date time range position Start

End date source attribute (optional) Lifecycle - Live Date time range position End

Add Element Type

Global Search

- If you wish to switch off the global search feature in your environment you're now able to configure this in the settings of your application.

View Configuration Panel

- In a continued effort to make configuration on the platform more intuitive we are making changes to the View Configuration Panel. This will help the user determine what input is essential for creating a View and what is additional configuration. Depending on which view type the user selects they will be presented with different default configuration options.

EA v2

- Ability to set logical page breaks within publications
- Ability to make the rich text editor full-screen
- Campaigns & Publications: Margins applied to .png outputs

Fixes:

- Views. Relationship context not working
- Views. Table Views. Relationship list not showing 3 dots when multiple values
- SAML2: Login Listener passes null user descriptor
- Views. Queries. Concurrent sorting not maintaining the correct order
- Views. Table views. Sort order not maintained when using view state
- Views: No loader shown in global search and relationship edit
- Views: edit relationships search doesn't autofocus
- Views. Object creation not working
- Views: list not auto selecting
- TinyMCE. Line break styling not being applied within TinyMCE editor
- Views: Real inputs in detail views are flagging incorrectly for valid values
- Global search results shown above panel / dialogue views
- Global search and related: Filter is not remembered in dropdowns
- Layout View configuration shows 'workspaces' title
- View. Resize configuration not kept in sync with number of child views
- Rich Text Full Screen: Leaves white bar along top of view until page refreshed

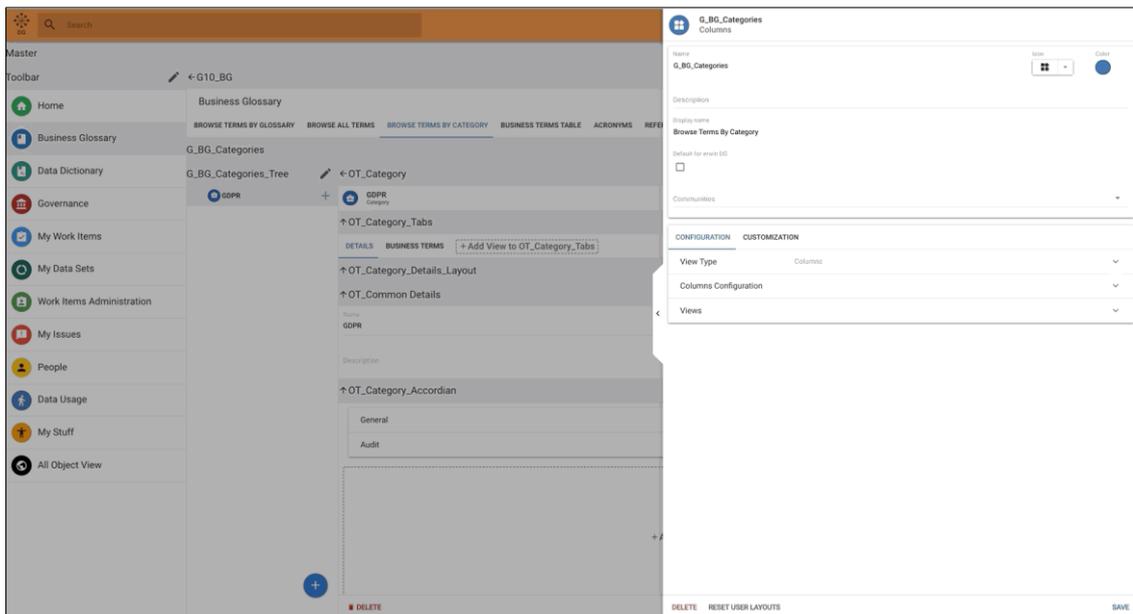

- Views: Set To Default Value doesn't work
- Views: Data source type cannot be changed
- Date picker styling broken
- Views: editable table checkbox line up
- View User State: Must provide sorts error

3rd October - Release 107

New:

Workspaces

- Workspaces have been introduced to the platform. You can add a workspace picker to parent & child views

Improvements:

Display Properties

- When adding a Display Property you can also create a customised display name for that property, this is especially useful when displaying Relationships.

Object Picker

- All Object Pickers on the platform now display a total so you can see how many Objects in total are available to select from

EA v2

-
- Diagrams. Add tooltips to Diagram palette show/hide icon
 - Publications: Edit menu or Right Context menu has cut, copy, and paste options
 - Publications: Ability to set margin for pdf files and printing

Fixes:

- Views. Missing initial loading view on some view types
- Text input: Add several returns and additional unintended space also added
- Journey performance slow
- Views. Tab view without child views hard error
- Views. Cannot open default object type view
- Views. Details view styling weird
- Views. Table View. Select all breaks after edit
- Filters - Predefined boolean filter criteria values aren't reflected in data (but are in UI)
- Views. Single floating actions don't show tooltip
- Views. Columns Layout view count mismatch causes hard error
- Filters: UI hard errors attempting to show Relationship List 'Has value'/'Does not have value'
- GoJS showing watermark
- Tooltips on floating actions show if empty
- Filters: Various attribute types are broken in various ways in filter UI input
- Views: Heatmaps break filters
- Views: Numbers not showing in details style accordion

Operations

Journeys:

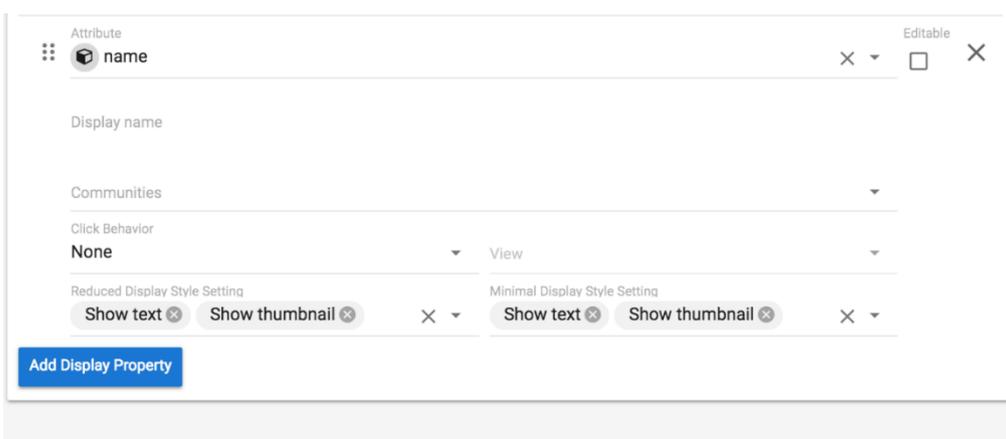

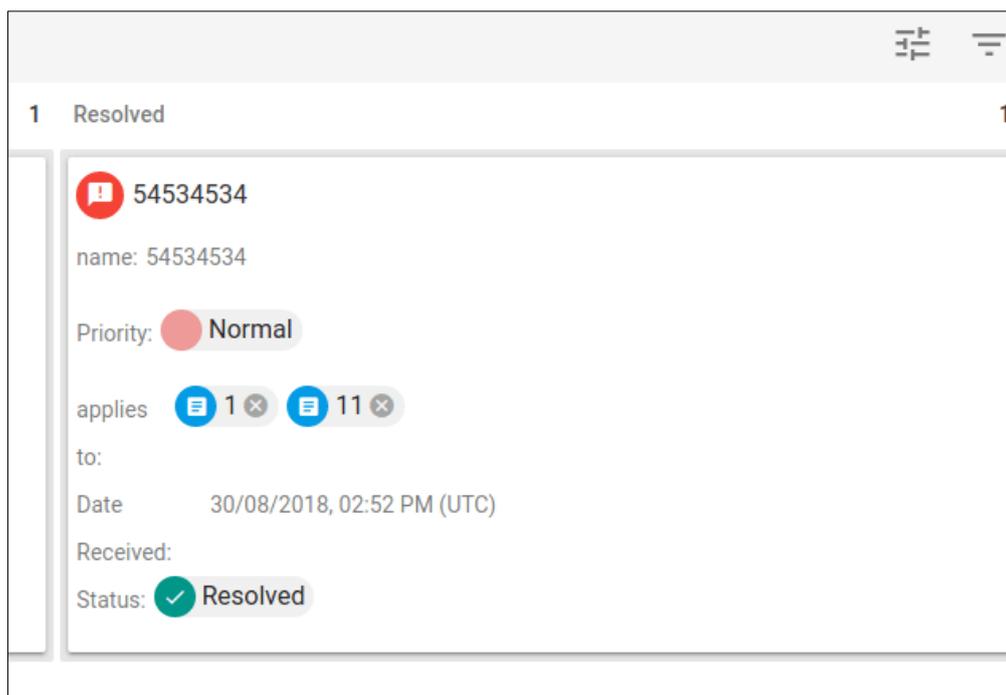

- Journeys have received a performance improvement. Views that use Journeys will fetch & return data faster

13th September - Release 106

Improvements:

Minimal Display Attributes

- For display attributes in; Lists, Tables, Kanbans, Details you can now set customized **Reduced** and **Minimal** display style settings. You can find the settings in the configuration panel.

Communities

- Communities have been improved so you can now add additional admin's in a community and registration requests can be assigned to a community

Diagrams

-
- When creating a Diagram, users can now reverse the direction of groupings

View State

- As part of our work to improve view space utilization we allow users to customize their erwin experience by setting their own width to columns, tables etc. We've added two new buttons that allow users to reset view layouts for the whole of their system (found in the admin page) and page configurator to reset view layouts for all users of a single view (found at the bottom of the configuration panel of a view)

Fixes:

- Views. Impact Diagram Journey -> Grouping wrong way around
- Views: Diagram-views: Collapse box doesn't work correctly
- Date time ranges: Start date shows end date
- Views. Queries. Sorting doesn't work
- Views: Can't provision view actions
- Webpack: App doesn't load on IE11
- View item actions: not filtering per element type
- Views: Menu actions not clickable
- IE: Panel expander position wrong in IE
- Display fields for text attributes are large

31st August 2018 - Release 105

New:

- SAML2 - Access to configuring SAML in your environment can be found in the system menu under 'Account'. Please get in touch with support if you require assistance with getting set up or have any questions.

Fixes:

- Views. Configuration. Highlight invalid attribute configs
- ViewUserState: Sort
- Table view: Action Bar displays when it shouldn't
- Cannot provision trials
- Views - Table column can be set to <50 through the API
- Views - If columns view larger than screen width resize handles
- "Forgot your company" functionality is broken
- Object Type Views: Default View for Object Type Creation is not Working after View State
- Object Type Views: Objects without default view created don't show the "Create Default View" button
- Views: Row sizes don't appear on the edit form
- Filters: Not saving integers
- Views: Columns layout config has alt size for drag handles

-
- Views: Tables no longer re-render to remove white space if container size increases
-

23rd August 2018 - Release 104

Improvements:

View Space Utilisation

- When viewing a page with more than 1 view within it you'll be able to click on the border of those views to resize the width using drag and drop. Your View states will also be stored for the next time you log in.

Table View

- When you've created a Table you'll be able to pre-define column sorting and also how many rows you'd like to display

Date/Time Data Type

- The timezone you have set your environment to will now be displayed wherever a date/time is shown

Fixes:

- erwinDG Registration Email - link blooper
- Fix Vagrant box initialisation - npm/on-premise artefacts
- View Resizing: Moving from a child view to its parent doesn't trigger a resize
- MMF. Element CSV Import. Import failing - too many placeholders
- MMF: CSV import. Creates duplicate relationships on self-to-self relationships.
- DM XML Import. No model information in failed import notification
- User registration throws username already exists error but does not appear in
- Old Diagrams. Inconsistent Behavior when selecting multiple nodes
- Chip overflow markers show on kanban items without extra chips

7th August 2018 - Release 103

New:

Additional Admin User

- You'll be able to have the ability to assign more than 1 administrator to your environment

Improvements:

View Space Utilisation

- You'll now be able to configure a view so it's expandable and collapsable on click. Sizes are fully customizable and you'll be able to set the View to pop-over an adjacent view rather than shrink it

Tree View

- We have improved the performance of our Tree View when returning very large sets of data

Fixes:

- Filter UI. Dropdowns go back to the top after scrolling to the bottom
- Tab view tab names don't update when display name is changed - didn't fix completely
- Filter UI. Relationship Types and Filters are fetched multiple times
- Resize handle arrow faces the wrong direction when previous columns are set to fill the container
- Resizing views on hover can cause the view to spasm
- Filters. Cannot create a Filter relating Issues to Sprints
- No indication of chip overflow (table)
- Table View. No indication of where to drag for column resizing
- Column details not updating in the edit panel
- Diagram config objects blank
- DM XML Import. Creates duplicate relationships
- Grid component, changing diagram types shows error in the console
- Publications: Weird exported table styling
- Anonymise users not working for geniusb
- Charts. Word Cloud. 500 when viewing it

19th July 2018 - Release 102

New:

Action: OpenURL

- Users will be able to add either an Action or Item Action to Collection views and Object Type Views to open a selected URL attribute

Improvements:

View Space Utilisation

- We're making improvements to the visual layout of the platform so users are able to make the most of the visualizations available

Table Views

- Table views will have vertical and horizontal scrollbars
- Headers on Table Views will be frozen and will also allow users to place Action icons in the Table Header

Tree Views

- Display names are configurable

Application Tile: Navigate to Accounts Page

- To make navigating the platform easier we've added the Account page (the first page you come to when you first log in to the platform) to the Application Tile found in the top right of the screen

Filters

- We've improved the UI of filters to support nesting and included two new operators: 'Has value' & 'Does not have value'

Fixes:

- User anonymisation. Avatar is not reset on the frontend
- Table. Empty table shows border/shadow from footer
- Delete old log files
- Application select css alignment
- If filter name is taken save button is disabled indefinitely
- Adding "is object -> does not equal -> any " to filter makes it not render
- Client login 404s if no client with given name exists
- Filter UI. Send many execute-filter requests when loading a Filter
- Filter UI. Relationships not scoped to Element Type
- Filter UI. Make add icon consistent
- EAv2. Object duplication hard erroring
- Data Model Search: Filter by tags does not work. Unable to clear out filter.
- Horizontal Scroll on table in EAv2 not clickable
- Tables overlapping and cutting stuff off in dm nosql
- Deleting a chip with the same relationship and element type as another will delete the second chip
- Old Diagrams. Cannot create a diagram with communities (maybe user is part of a community)
- Old Diagrams. Navigating away without changing it triggers "Unsaved changed" dialogue
- Publications won't create
- Views. Filter fetches when nothing changes
- Update user activity report to send to a specific mail group
- MMF. Filters. Filter migration breaks on non-support computed attribute on beta
- MMF. Filters. Filter migration has undefined variable usage
- MMF. Filters. Filter migration breaks on date-times with null value
- Provisioner doesn't hard error on related Object criteria
- MMF. Filters. Filter migration breaks on related Object criteria
- Cannot create new views in EA Agile v2

-
- Community UI. Users can still edit inputs even though they can't save
 - Default page size is not 10 when populating empty table
 - Erwin: 'View Properties' closes on right click
 - Tab view tab names don't update when display name is changed
 - Removing 1 chip removes all chips

Operations:

- Updates to API following subdomain changes

6th July 2018 - Release 101

Features & Performance Improvement

- **User Anonymisation**
 - Administrators will be able to anonymize an account so personal information is not stored within the system
 - You will be able to either generate a random alphanumeric string or create your own
- **Timeout length extended**
- **Default Table size**
 - Tables will now have a default of 10 rows rather than 5

2nd July 2018 - Release 100

Features & Performance Improvement

Performance Improvements

Introduction of Sub-Domains

- Users will now access the platform through 'companydomain'.myerwin.io
- If you don't know your companydomain you can go to myerwin.io and click 'Don't know your company domain?' and receive an email with the information
- To change your companydomain please contact support

Ability to opt-in or opt-out to updates

- Administrators will now be able to opt-in or opt-out of updates from erwin

-
- You will automatically be opted-out so if you wish to receive updates then please go into your settings and check the 'Opt-In' box

API Improvements - Patch

Updated colors and icons of erwin applications on the platform

Logging

- We now log the following in the platform
 - Login's - Login attempts, Login successes, Login failures, Login attempt exceeded lockouts, Login - impersonations, Logouts, All HTTP requests
 - Exceptions: Bad requests - syntax, semantics, not found, Unauthorised/forbidden requests, Internal
 - Data: Correlation ID, Source IP address - if available, URL - if available, Client ID - if authenticated, User ID - if authenticated, Impersonator Client ID - if user is impersonated, Impersonator User ID - if user is impersonated
- If you ever wish to obtain these logs for your system please contact support

URL Attributes are clickable Hyperlinks in all Views

- When you create an Object Type Attribute of 'URL' the URL you enter is now a clickable Hyperlink
 - In order for your URL to work, it must contain *https://*
 - You can also use the URL of an internal system view by entering the highlighted section of a views URL:
`https://domain.myerwin.io/dg#views/default?mode=viewing&contextId=2356374`

7th June 2018 - Release 99

Features & Performance Improvement

Improvements to performance throughout the platform

Improved Table Navigation - Ability to skip to the first & last page as well as select a page from a drop-down list

16th May 2018 - Release 98

Features & Performance Improvements

Improvements to performance throughout the platform

27th April 2018 - Release 97

Features & Performance Improvements

API Improvements.

Improvements to the global search performance.

When adding an Action to create a new diagram. Users will be able to set the diagram type. If no diagram type is defined then users can select from a pick list.

Applications will be hidden if you don't have an explicit license for that application. System administrators will still be able to see all applications to assign licenses.

18th April 2018 - Release 96

Features & Performance Improvements

Diagram types and diagrams are common to all products. Diagram instances will be visible and editable across all applications.

Initiating a browser refresh erwin DG will remember the active view and position within that view. Users also can now navigate backward/forward within a browser.

Searching for objects to relate to in a Relationship List pick list, performance will be improved. No objects will be returned until the user starts to type a meaningful phrase with which to search again.

Improvements to the API to make it much easier for clients to work with the MMF.

29th March 2018

Defects

- 1461120 - Fixed 'created by' not being set on imported objects
- 1460768 - Fixed empty lists bringing back all objects rather than none
- 1059626 - Fixed mandatory attribute validation not working

27th March 2018

Defects

- 1447164 - Fixed roadmaps failing to open when an object has no date set

22nd March 2018

Defects

- 1042503 - Fixed kanban cards not having a blue outline when selected
- 1355151 - Fixed timeout warning appearing behind panels
- 1356080 - Fixed 'Created by User' not working in filters
- 1398419 - Fixed search bar loader spinning after search has been cancelled
- 1430815 - Fixed kanbans spinning after loading an empty collection of objects
- 1374353 - Fixed not being able to open attributes on an object type
- 1430869 - Fixed tooltips not appearing for actions in tables

2nd March 2018

Features & Enhancements

Table views now remember applied filters, sorts and page sizes.

Defects

975475 - Fixed parent database objects not appearing on lineage diagrams

Multiple - Many fixes and changes to CSV import

22nd February 2018

Defects

1321463 - Fixed BPMN diagrams not being created correctly

15th February 2018

Defects

1287094 - Fixed diagrams not always appearing in lists

1302875 - Fixed 'Create Issue' button not appearing in several places

7th February 2018

Defects

1068787 - Fixed DM import failing when length(max) was used

5th February 2018

Features & Enhancements

New views - Added new view types, scatter charts, roadmaps and wordclouds.

Defects

1040198 - Fixed not being able to add view actions to tab layout header region

Product Licensing

To know more about the information on Product Licensing, please refer to the **User Management** from erwin EA Agile V2 User Guide.

System Requirements

Supported Browsers:

Google Chrome Version 91.0.4472.124

Microsoft EDGE Version 91.0.864.67

Mozilla Firefox Version 90.0.2

Recommended Network Speed:

2 MBPS

About Us

Quest creates software solutions that make the benefits of new technology real in an increasingly complex IT landscape. From database and systems management, to Active Directory and Office 365 management, and cyber security resilience, Quest helps customers solve their next IT challenge now. Around the globe, more than 130,000 companies and 95% of the Fortune 500 count on Quest to deliver proactive management and monitoring for the next enterprise initiative, find the next solution for complex Microsoft challenges and stay ahead of the next threat. Quest Software. Where next meets now. For more information, visit www.quest.com.

Technical support resources

Technical support is available to Quest customers with a valid maintenance contract and customers who have trial versions. You can access the Quest Support Portal at <https://support.quest.com>.

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. The Support Portal enables you to:

- Submit and manage a Service Request
- View Knowledge Base articles
- Sign up for product notifications
- Download software and technical documentation
- View how-to-videos
- Engage in community discussions
- Chat with support engineers online

View services to assist you with your product.
