Atmos Adapter Configuration

This section will provide you details on how to configure a storage endpoint's connection string to utilize the Atmos Adapter. Please refer to the StoragePoint Reference Guide for information on managing Storage Endpoints.

On the Application Management page, click Storage and Backup Endpoints.

Click *Create New Endpoint* or click the name of an existing storage endpoint that you want to edit.

Click the *Show* link next to the Advanced Adapter Settings to see the additional fields.

Atmos Adapter Connection String Parameters

Setting	Value/Options
Name	Enter the unique name of the

	Setting	Value/Options
		Storage or Backup Endpoint.
Type Primary O Backup See Backup Services Settings in the how Backup Endpoints are used.	e Reference Guide for more information on	 <i>Primary</i>- this endpoint will be available for externalization when creating storage profiles. <i>Backup</i>- this endpoint will be in the Backup Services dropdown on the profile page. The selection is locked down when saving.
Status Status		<i>Online</i> – Storage Endpoint should be available to
Online		associate to a Storage Profile and accept BLOBs. (default)
		<i>Offline (Read</i> <i>Only)</i> – A storage endpoint can be configured, but not made available for externalizing content. The BLOBs already on the endpoint are still read only.
Adapter Atmos 🔽 🚱		Select the adapter for the

Setting	Value/Options
	endpoint that is being created.
	The username to use when connecting to the server. This is equivalent to the Token ID provided with your Atmos online account.
Key	The base64 encoded shared secret to use when signing requests to the server.
Advanced Adapter Settings (Hide) Base URI accesspoint.emccis.com	IP address or host name that represents the Atmos instance or specific node to be used. Default = accesspoint.emcc is.com.
Root	The starting folder/container within your Atmos namespace under which all folders and files will be created.
Use SSL	(<i>yes/nd</i>) Determines whether or not the adapter

Setting	Value/Options
	negotiates an SSL connection for all data (and metadata) transfers. See Appendix A for details on adding a trust relationship. Default = No.
Port 80	The port on the server to communicate with. Default = 80 (443 if UseSSL is Yes).
Verify Hash	(yes/nd) Includes a check-sum operation after each blob transfer. Allows the adapter to detect and log data integrity errors immediately. Default = No.
Is WORM Device	If the endpoint is on a WORM (Write Once, Read Many) device, Unused BLOB Cleanup will ignore this endpoint.

	Setting	Value/Options
Folder Content in BLOB Store Yes V Folder Scheme YYYY/MM/DD/HH/MM		No-Externalized content BLOBs are not placed in folders (default).
		<i>Yes</i> – Externalized content BLOBs are placed in folders.
		If <i>Folder Content</i> <i>in BLOB Store</i> is <i>Yes</i> then you can select a date/time folder scheme from the dropdown.
		YYYY/MM/DD/H H/MM is the default.
Test Storage Settings		The Test Storage Settings button can be used at this point, or after completing the endpoint configuration, to verify that the endpoint is accessible. For some adapters, testing the connection will create the folder if it doesn't already exist.
Compress Content in BLOB Store No <i>Content is compressed using the GZip/Def</i>	late method.	No-Externalized content BLOBs are not compressed (default).

Setting	Value/Options
	<i>Yes</i> – Externalized content BLOBs are compressed.
Encryption Method for Content in BLOB Store	<i>None</i> – Encryption will not be applied to externalized BLOBs (default).
	AES (128 bit) – 128 bit AES encryption will be applied to externalized BLOBs.
	AES (256 bit)– 256 bit AES encryption will be applied to externalized BLOBs.
Encryption Key Passphrase Generate Key Enter a passphrase to be used to generate a key or leave blank to generate a random key. The pass phrase entered is not saved with the Endpoint.	Enter a passphrase to use when generating the encryption key. Using a passphrase will help you re- create the encryption key if necessary. You can generate a random key by leaving the box blank and clicking the <i>Generate Key</i> button. The encryption key passphrase will be hidden.

Setting	Value/Options
Generate warning notification if: ✓ 10 or more successive errors are encountered ✓ there is less than 10 ● MB ○ % of free space	A warning email can be sent if it encounters errors.
Automatically take endpoint offline if: 25 or more successive errors are encountered there is less than 1	An online storage endpoint can be automatically taken offline if it encounters errors. If a storage endpoint is taken offline automatically, BLOBs that were intended to be written to that endpoint will go to the content database.
Send Offline Notifications to: Use Notification Defaults Additional Contacts admin@company.com Provide a semi-colon delimited list of e-mail addresses.	Default email addresses for system error and offline notification can be entered. Check the box to include the list of Default Notification Contacts specified on the General Settings page.

Example Storage Endpoint using Atmos Adapter

Storage Settings	Adapter			
Provide general storage settings in this section	Atmos 💽 😧			
	Adapter Settings	Show Connection String		
	UID			
	Bcf3acc45fa44c4a91863bcf529eb382BLUETSE1897B

	Root			
	Use SSL			
	Port 80			
	Verify Hash			

Click the *Show Connection String* checkbox to edit the connection string. Otherwise, fill in the connection fields shown for the adapter selected. Notice that the connection string parameters are name/value pairs separated by semi-colons when editing using the Show Connection String option.

Storage Settings Provide general storage settings in this section	Adapter	
	Adapter Settings	🗹 Show Connection String
	Connection UID=8cf3acc45fa44c4a91863bcf529eb382BLUET SE1897Bf36E5F70;KEY=dnF1/X8ykw1aumcymjt WUWjwUyk;BASEURI=accesspoint.emccis.com; PORT=80;ROOT=;USESSL=False;VERIFYHASH= False; Provide adapter-specific connection attributes. Please refe. the adapter documentation for connection string details.	Y

- NOTE: Adapter parameters are not case-sensitive.
- NOTE: You should always use a passphrase when generating encryption keys. The passphrase gives you a means of re-creating keys should they become unrecoverable or corrupt. It is very important to remember or record the passphrase outside of Metalogix StoragePoint. Otherwise, encrypted content could become irretrievable in the event of a database failure.

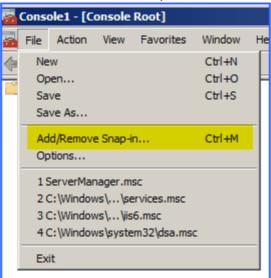

If you choose to externalize content you should test the storage profile settings by clicking the *Test Storage Settings* button. A message under the button will indicate whether or not the test was successful. If the test fails the message will include the error that was the root cause of the failure.

i NOTE: When testing access to an endpoint from within Central Administration, the Identity of the Application Pool hosting the Central Administration Site is the one that is being used for the test. If there are different Identities used for other Web Applications in the Farm then those identities will also need access but cannot be tested from within Central Admin itself. See BLOB Store Security and Metalogix StoragePoint Required Privileges in the Metalogix StoragePoint Reference Guide.

Appendix: Using SSL with EMC Atmos

In order for the StoragePoint EMC Atmos adapter to use SSL to communicate with Atmos, the Atmos instance's certificate must be added to the SharePoint certificate store. The following steps describe how to do this:

- 1. Click Start->Run. Enter 'mmc.exe' and press Enter.
- 2. On the File menu, click Add/Remove Snap-In.

3. Click Certificates on the left, then click Add. A new window opens; select Computer Account and click Next.

Add or Remove Snap-ins					
You can select snap-ins for this console from those available on your computer and configure the selected set of snap-ins. For extensible snap-ins, you can configure which extensions are enabled. Available snap-ins:					
Snap-in	Vendor	•		Console Root	Edit Extensions.
ActiveX Control Authorization Manager Certificates Component Services Computer Managem Device Manager Disk Management Event Viewer Folder	Microsoft Cor Microsoft Cor Microsoft Cor Microsoft Cor Microsoft Cor Microsoft Cor Microsoft and Microsoft Cor Microsoft Cor		Add >	Certificates snap-in This snap-in will always mana © My user account © Service account © Computer account	ge certificates for:

4. Select Local Computer and click Finish.

[
	< Back Finish Cancel	

- 5. Click OK.
- 6. Expand Certificates (Local Computer)->Trusted Root Certification Authorities->Certificates. Find the root certificate. For AT&T this is the Verisign "G5" certificate:

- 8. The Certificate Export Wizard opens. Click Next. The default "DER" format is fine. Save to the desktop as something like verisign-G5-root.cer. Click Next.
- 9. Click Finish to complete the export. Click OK on the message. Click OK to close the certificate window.

10. Open the SharePoint Central Administration. Click Security from the navigation on the left. Select Manage Trust from the General Security section.

- 11. You will probably only see one certificate here, "local". Click "New."
- 12. Give it a name like Verisign G5 Root. Pick the file you exported to your desktop. Leave "Provide Trust Relationship" blank.

13. Click OK.

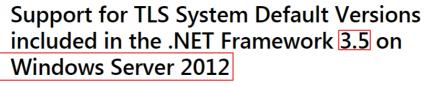

The Use SSL option can now be configured and used with the StoragePoint EMC Atmos adapter.

Appendix: Atmos adapter support for TLS 1.1

The following steps need to be performed on all servers that have StoragePoint installed.

1) Install MS fix for TLS for .NET 3.5:

https://support.microsoft.com/en-us/help/3154519/support-for-tls-system-default-versionsincluded-in-the-net-framework____

Applies to: Windows 8, Windows Server 2012 Datacenter, Windows Server 2012 Datacenter, More

The .NET framework version 3.5 and earlier versions did not provide support for applications to use Transport Layer Security (TLS) System Default Versions as a cryptographic protocol. This update enables the use of TLS v1.2 in the .NET Framework 3.5.

Resolution

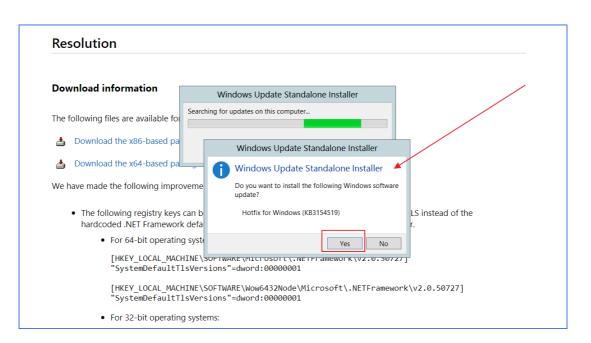

Download information

The following files are available for download from the Microsoft Download Center:

Download the x86-based package now.

bownload the x64-based package now.

We have made the following improvements in this area:

4	Download and Install Updates	X
4	Installation complete	
		Close

2) Provide defaults for TLS configuration (in this case TLS 1.1). Add the following registry values (if missing):

[HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\.NETFramework\v2.0.50727] "SystemDefaultTIsVersions"=dword:00000001

[HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\Microsoft\.NETFramework\v2.0.50727] "SystemDefaultTIsVersions"=dword:00000001

3) Verify if TLS 1.1 client is enabled:

[HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\SecurityProviders\SCHANNEL\P rotocols\TLS 1.1\Client] "Enabled"=dword:00000001 "DisabledByDefault"=dword:00000000

- 4) Complete an <u>IIS</u> reset and SP Timer Service Reset.
- 5) Test on Atmos endpoint web page.
- 6) Run the BLOB Health Analyzer job for requested profile(s).

About Us

2

Quest creates software solutions that make the benefits of new technology real in an increasingly complex IT landscape. From database and systems management, to Active Directory and Office 365 management, and cyber security resilience, Quest helps customers solve their next IT challenge now. Around the globe, more than 130,000 companies and 95% of the Fortune 500 count on Quest to deliver proactive management and monitoring for the next enterprise initiative, find the next solution for complex Microsoft challenges and stay ahead of the next threat. Quest Software. Where next meets now. For more information, visit www.quest.com.
