Metalogix Sensitive Content Manager

Metalogix Sensitive Content Manager (SCM) provides a reliable, accurate and flexible solution for detecting sensitive information such as Personally Identifiable Information (PII), Protected Health Information (PHI) and Payment Card Industry (PCI) in English, German, Spanish, Italian, French and Portuguese, within enterprise content management systems.

This guide contains instructions for the administration of Sensitive Content Manager.

Integration with Metalogix ControlPoint and Microsoft SharePoint

SCM can leverage the existing security, compliance and administration capabilities of Metalogix ControlPoint to enforce policies using the full range of Microsoft SharePoint's permissions management, auditing and user activity reporting. With on-demand scanning, administrators can flag specific libraries, sites, or site collections for content discovery, or use real-time content shield by analyzing files as they are created, modified, moved, or destroyed. The combination of SCM and Metalogix ControlPoint offers a powerful Data Loss Prevention (DLP) solution that uses customizable and intelligent scanning subsystems to identify, track, and secure documents. This ensures a more robust level of information governance inside increasingly complex enterprise environments.

Integration with Metalogix Essentials

Essentials and SCM together allow a customer to selectively migrate file-share content based on the sensitive nature of the content after analysis with SCM.

SCM Architecture

Metalogix SCM uses a microservices architecture that is comprised of several services that can be deployed on a single server or distributed across several servers. These services work together to analyze documents using regular expressions and machine learning. The SCM components are described below:

SCM Databases

Each service has its own database which together form the SCM Databases and represent the central repository for the configuration, analysis results and operational metrics of the Metalogix SCM.

Service Bus

Metalogix SCM uses RabbitMQ as the service bus. It provides the intelligent message routing, event queuing and sequencing needed by SCM to analyze the files.

SCM Services (IIS)

- Admin Portal The SCMAdminPortal service manages the SCM Administration Center.
- Admin Services These are back-end services that feed information about other services to the SCM Administration Center.
 - SCMAdminService is used for license management, monitoring the system health and other administrative operations of SCM.
 - o SCMAdminService-Analytics
 - o SCMAdminService-Notifications
 - o SCMAdminService-Profiles
 - o SCMAdminService-Scans
 - o SCMAdminService-Subquestions
- File Upload Service When integrated with Metalogix ControlPoint, the *SCMFileUploadService* receives the requests to analyze one or more files. It stores these files and submits a request to the queue to analyze these files.
- **Profile Service** A profile is a named collection of content search and analysis guidelines. Each profile is made up of sub-questions, weights and file thresholds. The *SCMProfileService* serves the profiles that are needed for content analysis.
- **Result Service** When integrated with Metalogix ControlPoint, a REST API call requests the *SCMResultsService* to return the metrics and results of the files that were analyzed by the Analysis Service. Results are kept for a limited period.
- **Subquestion Service** A sub-question is a search term used to identify a specific kind of sensitive content. The *SCMSubquestionService* serves the entire collection of sub-questions available for use within profiles.
- Scan Service The process of analyzing files in a file-share and the generated report is called a *scan*. The *SCMScanService* allows you to submit, cancel or delete scans, and serves metadata about running scans and scan reports.
- Analytics Service The SCMAnalyticsService collects and stores data about analysis throughput. Collected data supports the dashboard experience and is only kept for a limited period.
- Notification Service The SCMNotificationService provides live-updates for scan progress, health and notifications within the SCM Administration Center.

SCM Services (Windows)

- Document Routing Service When files are uploaded for analysis, they are stored in a specific *temporary folder* on the SCM Server. The *Metalogix SCM Document Routing Service* inspects each file from the folder to check whether these files are single files or complex files like compressed files or emails with attachments. Since only single files can be analyzed, this service submits complex files to the **Archive Extraction Service** to extract individual files for analysis. You can analyze the following file types: *Compressed files, Microsoft Office Files, Open Document Text, Portable Document Format, Rich Text Format,* and *Text Document*.
- Archive Extraction Service When complex files are submitted for analysis, the *Metalogix SCM Extraction Service* extracts individual files from the file set.
- **Document Processing Service** When single files are ready for analysis the *Metalogix SCM Document Processing Service* extracts the content from the files.
- Analysis Service The *Metalogix SCM Analysis Service* analyzes the content in each file using regular expressions and machine learning technology. All files are permanently deleted from the *temporary folder* when the analysis is completed.
- **Crawler Service** The *Metalogix SCM Crawler Service* inspects the contents of a file-share and the sub-folder hierarchy for supported files that are submitted for analysis.

SCM Administration Center

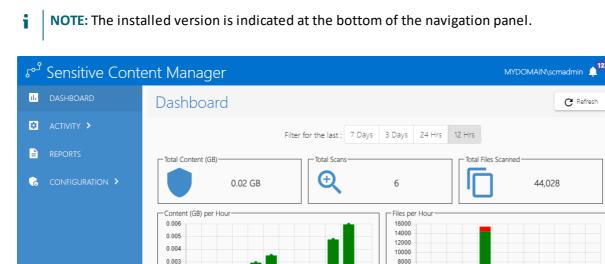

0.002

0.001

E LEGAL

0

The SCM Administration Center provides an overview of the scan results and lets administrators manage licenses, monitor the system health, and work with system logs to analyze the health of services with greater granularity.

2101.01.02.01.03.01.04.00.05.000 Fri 01.00.05.000

0 Thu 22:00

Steps to open the SCM Administration Center

- 1. Log in to the SCM Server.
- 2. Double-click the desktop shortcut to open the SCM Administration Center. You can also enter the URL directly in a browser. To get the URL for your own installation see <u>Steps to get the URL for the SCM Administration Center</u>.
- 3. In the *Sign in* dialog that opens, enter the credentials of the SCM Administrator.

Sign in https://scmde	emo.mydomain.com:44300
Username	mydomain\scmadmin
Password	
	Sign in Cancel

- 4. Click Sign In. The Dashboard page opens by default.
- 5. You can navigate to any administration feature accessible with your license.

Dashboard

2

The Dashboard is the default page that opens when you log in to the SCM Administration Center. It provides a snapshot of the scan results over a pre-selected period and helps you to inspect the scans in greater detail.

Refreshing the dashboard data

Since the Dashboard presents a snapshot of the scans, you must click Refresh to update the snapshot to view the performance of any scans that are in progress.

Dashboard filters

The Dashboard provides four preset filters to present data about past and present scans. Click any preset filter to get the data for that period.

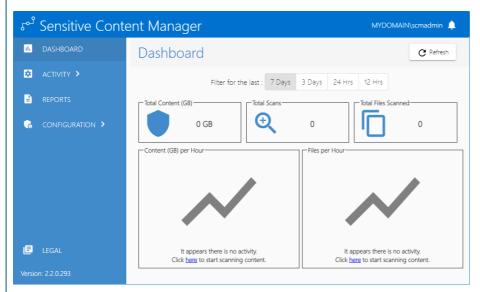

7 Days - presents scan data from the scans that started within the last seven days. This is the default selection.

3 Days - presents scan data from the scans that started within the last three days.

24 Hrs - presents scan data from the scans that started within the last 24 hours.

12Hrs - presents scan data from the scans that started within the last 12 hours.

NOTE: If there are no scans that are in progress or completed within the period filter that you select, you will see empty panels in the Dashboard.

Click the hyperlink in the line **Click here to start scanning content** to submit a scan report and start a scan.

Dashboard panels

There are five panels on the Dashboard as described below:

Total Content (GB)

This panel displays the latest snapshot of the total size of data (in GB) processed within the period selected from the filter.

Total Scans

This panel displays the latest snapshot of the number of scans that started within the period selected from the filter. When the snapshot is taken, the scans could be in one of the following states: *In Progress, Canceling, Canceled,* or *Completed*.

Total Files Scanned

This panel displays the latest snapshot of the total number of scanned files within the period selected from the filter.

Content (GB) per Hour

This chart displays the latest snapshot of the total size of the data (in GB) processed per hour within the period selected from the filter. A line chart is displayed if the period filter is either **7 Days** or **3 Days**. A bar chart is displayed if the period filter selected is either **24 Hrs** or **12 Hrs**. When you hover your mouse over a line or bar, the **Content (GB) per hour** parameter is displayed.

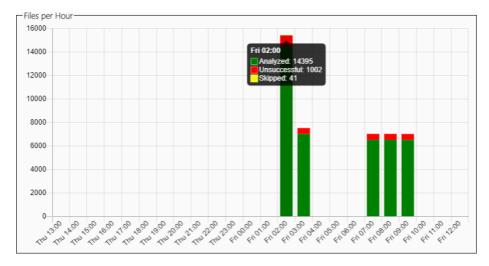

Files per Hour

This chart displays the latest snapshot of the total number of files processed per hour within the period selected from the filter. A line chart is displayed if the period filter is either **7 Days** or **3 Days**. A stacked bar chart is displayed if the period filter is either **24 Hrs** or **12 Hrs**.

The line or bar chart has three data points. When you hover your mouse over a line or bar, the following data points are displayed:

- a. Analyzed indicates the number of files that were successfully analyzed.
- b. Unsuccessful indicates the number of files that could not be analyzed.
- c. **Skipped** the number of files that could not be submitted and were not processed any further. There could be several reasons why files are skipped. For example, files may be skipped because the file type is not supported, there is a problem reading the contents of the file, there is low disk space on the server, or the file upload service was unavailable.

Content Processed by Service

To access this chart, click the **Content (GB) per Hour** chart in the Dashboard.

This chart displays the latest snapshot of the total size of the data (in GB) processed by each service per hour within the period selected from the filter. A line chart is displayed if the period filter is either **7 Days** or **3 Days**. A grouped bar chart is displayed if the period filter is either **24 Hrs** or **12 Hrs**.

If you have a distributed deployment, an additional filter is available that lets you select the server node to inspect the performance of services installed on that node.

Chart operations:

- 1. Hover your mouse over a line or bar to view the total content (in GB) processed by each service. You can inspect the performance for all the services or you can choose specific services that you want to inspect.
- 2. Click any service or its color code that you want to exclude from the chart. The service name that is excluded will be indicated with a *strikethrough*.
- 3. Click the service (or its color code) that was previously excluded and you want to include in the chart. The *strikethrough* disappears from service names that are included in the chart.

Analysis Service 👥 Result Service 📩 Document Processing Service Document Routing Service 📰 Grawler Service Theophoad Service

- 4. Click **Refresh** to get a fresh snapshot of the chart data.
- 5. Click **Close** to return to the Dashboard.

Files Processed by Service

To access this chart, click the **Files per Hour** chart in the Dashboard.

This is a detailed chart that displays the latest snapshot of the total number of files processed by each service per hour within the period selected from the filter. A line chart is displayed if the period filter is either **7 Days** or **3 Days**. A grouped bar chart is displayed if the period filter is either **24 Hrs** or **12 Hrs**.

If you have a distributed deployment, the **Filter by Host** is an additional filter that is available that lets you select the server node to inspect the performance of the services installed on that node. The default is **Cluster** which includes services from the primary SCM server as well as the server nodes.

- 1. Click **X** to close the panel.
- 2. Click **Dismiss All** to clear all the messages from the panel.
- 3. Click **i** to delete a single message.

License Management

4

The *License Information* page of the SCM Administration Center lets you to register your product and view your license details. When you download and install a trial version of Metalogix SCM you get a free 30-day trial license. If you would like to purchase a license, contact Quest to get your license key and follow the instructions presented here.

NOTE: You must reactivate your license after an upgrade to ensure new license-linked features are synchronized with your license.

In this topic

- Steps to view the license information
- About the trial License
- Steps to activate your license online
- Steps to activate your license offline

Steps to view the license information

1. From the navigation panel click **LICENSE**. The *License Information* page opens.

5. Click **Finish**. Refresh the page to update the license status and access the licensed features.

Steps to activate your license offline

This option lets you access the Quest offline activation web site when you have a working internet connection.

- 1. Log in to the SCM Administration Center and click License from the navigation panel. The License Information page opens.
- 2. Expand the Offline Activation section.
- 3. Step 1: Enter your license key
 - a. In the License Key field, enter your license key and click Next.

4. Step 2: Get Activation Data

- a. Click Get Activation Data.
- b. When the data is available, the next step is activated
- 5. Step 3: Copy/Save activation data
 - a. Select from the two options described below:

Option 1: Click Save Activation Data to Clipboard. The activation data is saved to memory. Use this option if you plan to follow through with the subsequent steps immediately.

Option 2: Click Save Activation Data to File. The Windows File dialog opens. Use this option if you plan to activate the license later. Specify a file name for the activation data file and click Save to save the file to a location of your choice.

6. Step 4: Submit Activation Data

- a. Using your alternate internet connection navigate to <u>https://support.quest.com/offline-activation</u>.
- b. In the previous step, if you opted to click **Save Activation Data to Clipboard**, place your cursor in the **Activation text** field and click **Ctrl-V** to paste the activation data.
- c. In the previous step, if you opted to click **Save Activation Data to File**, click **Choose File** and locate the saved activation data file.

About the Services Health page

The *Services Health* page presents a snapshot of the overall health of the system. It is frequently updated with the latest status from the SCM repository. This section displays the following information about the SCM services.

- a. **Status** indicates the health of the service. The two possible values are: **Up** and **Down**. Click the status link to view details about the service. For the *Analysis Service* and the *Document Processing Service*, the details also include the set of documents that are currently being processed.
- b. Service Name name of the service.
- c. Server name of the server where the service is installed.
- d. Last Contacted most recent date and time when the service published health information.
- e. Version the version of the service that is installed on the server.

In a distributed environment, additional servers that are deployed to host one or more services will also be displayed along with the service and other health information.

Work In Progress

The *Work in Progress* page presents information about the queues that transport data in a standalone or distributed SCM deployment in your organization.

In this topic

Steps to view the Work In Progress page

About the Work In Progress page

Managing the dead-letters queue

Steps to view the Work In Progress page

- 1. From the navigation panel, expand **ACTIVITY** and then click **WORK IN PROGRESS**. The *Work In Progress* page opens.
- 2. Click **By Service** tab to view the messages in the service queues.

-or-

Click **By Queues** tab to view the messages in each queue.

	Notification Service	0

About the Work In Progress page

The *Work In Progress* page presents a snapshot of the number of messages in various queues. This page supports auto-refresh to display the latest message counts from the SCM repository. This page has two tabs as described below:

By Service

This tab displays the following information about the service queues. A service queue could have one or more message queues that transport data.

- a. Service Name name of the service queue.
- b. Messages in Queue number of messages across all the queues in the service.

By Queues

This tab displays the following information about the message queues.

- a. **Queue** name of the message queue. The format of the name is *message-category_service-name*.
- b. Messages in Queue number of messages in the queue.

Filter

The *Work In Progress* page provides a filter to display specific service queues or messages queues in the respective tab. Enter the full or partial name of the service or message queues in the respective tab to locate the queues that match the filter query.

Managing the dead-letters queue

The dead-letters queue is a service implementation in message queues that store messages that cannot be sent successfully to other message queue for a variety of reasons. You can check for messages in the dead-letters queue in the **By Queues** tab.

ి Sensitive Conte	ent Manager	
1. DASHBOARD	Work In Progress

 SERVICES HEALTH 	Filter	
WORK IN PROGRESS	Queue Name	Messages In Queue
E LOGS	dead-letters	400
REPORTS	analyze-content_analysis-service	0

You can manage these messages in one of two ways as described below:

• Steps to retry messages

a. Click \mathfrak{I} to retry messages. A confirmation dialog appears.

Confirmation			
You are about to retry all messages f Are you sure you want to retry these		queue.	
	No	Yes	

b. Click **Yes** to allow the application to resend the messages to the appropriate queue.

• Steps to purge messages

.

a. Click **i** to purge messages. A confirmation dialog appears.

Confirmation		
You are about to purge all messages from the dead-letter This action is irreversible. Are you sure you want to purge messages?		
No	Yes	

b. Click **Yes** to purge all the messages in the dead-letters queue.

Logs

The *Logs* page displays collected details about application service events.

About the Logs page

The **Logs** list presents the information about the system and services as described below. You can sort and filter each column in the **Logs** list. The filter recognizes a keyword and does not support logical operators or wildcard characters. The columns in the **Logs** list are described below:

- a. Date local date and time when the log entry was written.
- b. Component name of the SCM service.
- c. Server Host name of the saver where the SCM service is hosted.
- d. Level granularity level of the log. See <u>Settings</u> for more information about managing the log level.
- e. Message information about the log entry.

- f. Exception detailed error description when the log level is an Error.
- To customize the number of items displayed on the page, click the **Items per page** drop down below the list and choose the number of items you wish to display. If there are more profiles than the list can display, you can use the navigation links below the list to browse through more profiles.
- Enter a keyword in the **Filter** field above the list to filter the logs by the keyword entered.
- Click **Refresh** to retrieve and display the latest log entries from the SCM repository.

Exporting Logs

The *Export Logs* dialog provides a filter with which a user can specify the criteria for exporting SCM log data.

- Steps to export Logs
- About the Export Logs search criteria

Steps to export Logs

- 1. From the navigation panel, click **ACTIVITY** and then click **LOGS**. The *Logs* page opens.
- 2. Click **Download**. The *Export Logs* dialog open.

Export Logs	
Start date	Ē
End date	Ē
Level Any	*
Component Any	Ŧ
Download format CSV	•

3. Specify the export criteria and click **Download.** The data is exported to the *exportLogs.csv* or *exportLogs.json* file as specified in the **Download format** field.

About the Export Logs search criteria

The search criteria are described below.

a. Start Date - date from when the logs will be exported.

- b. End Date date until when the logs will be exported.
- c. Level log level to export. Possible choices are: Any, Verbose, Debug, Information, Warning, Error and Fatal.
- d. Component name of the SCM Service. Possible choices are: Any, Admin Service, Analysis Service, Analytics Service, Archive Extraction Service, Crawler Service, Document Routing Service, Document Processing Service, File Upload Service, Notification Service, Profile Service, Results Service, SubQuestions Service and Scan Service.
- e. Download format select from CSV or JSON.
- f. Click **Export** to export the results or **Reset** to clear the criteria. Click **Close** to close the *Export Logs* dialog.

Reports

6

Reports are the results of a scan across one or more files that is initiated from the Reports page.

In this chapter

- About Active Reports
- Steps to create a new report
- Steps to cancel a report
- Steps to delete a report
- <u>Report Details</u>
 - <u>Steps to view report details</u>
 - <u>Managing items per page</u>
 - Filtering scan results

- Journals
 - <u>Steps to view journals</u>
 - <u>Managing items per page</u>
 - Filtering journal items
 - Downloading journal items

About Active Reports

1. From the navigation panel on the left, click **REPORTS**. The Active Reports page opens.

The Active Reports page lists both in-progress and completed scans with a high-level overview of the scans. For scans that are in-progress, this overview provides information about the current progress. For completed scans, this overview provides information about the result of the scan. The scan reports are retained in the system with links to download the associated report for scans that were completed.

Common scan management actions like creating, canceling or deleting a scan are available from this page.

This page also provides links to interactive scan details for each file for a selected scan report.

Active Reports						+ New Report 🖽 Det

Feb 02. 2022. 02:20:50	\\scmsvr\documents	PI	Completed	Download	Mar 04, 2022, 02:31:34	

- To customize the number of items displayed on the page, click the **Items per page** drop down below the list and choose the number of items you wish to display. If there are more scan reports than the list can display, you can use the navigation links below the list to browse through more scan reports.
- Enter a word in the **Filter** field above the list to filter the set of scan reports by the word entered.

The columns in the list are as follows:

- a. Submitted Date date and time when the scan was submitted.
- b. Folder Path the UNC location of the root folder that contains one or files or folders to be analyzed.
- c. **Profile** Name of the profile used in the scan.
- d. **Status** indicates the state of the scan. Valid values are *In Progress, Canceling, Canceled* and *Completed*.
- e. **Report** link to download the report. If the report status indicated **In Progress** or **Canceled**, the link does not appear because the report does not exist.
- f. **Expiration Time** the date and time until when the report will be active. This date and time depend on the retention period that you selected when the scan was created.

Report Overview

- a. **Status** indicates the state of the scan. Valid values are *In Progress, Canceling, Canceled* and *Completed*.
- b. Files Submitted the number of files that could be analyzed and have been submitted for analysis by the system. When the Status indicates *In Progress*, this value will be incremented every time a file is submitted for analysis. When the Status indicates *Completed*, this value will indicate the total number of files that were submitted for analysis.
- c. **Pending** the number of files waiting to be scanned. This parameter is displayed when **Status** is *In Progress*, otherwise it is hidden.
- d. **Analyzed** indicates the subset of the **Files Submitted** that were successfully analyzed. When the **Status** indicates *In Progress*, this value will be incremented every time a file is

successfully analyzed. When the **Status** indicates *Completed*, this value will indicate the total number of files that were successfully analyzed.

- e. **Unsuccessful** indicates the subset of the **Files Submitted** that could not be analyzed. When the **Status** indicates *In Progress*, this value will be incremented every time a file could not be analyzed. When the **Status** indicates *Completed*, this value will indicate the total number of files that could not be analyzed.
- f. **Skipped** the number of files that could not be submitted and were not processed any further. There could be several reasons why files are skipped. For example, files may be skipped because there was a problem reading the contents of the file or due to low disk space on the server, or the file upload service was unavailable.
- **NOTE:** The information presented can be used to verify the scan in the following ways:
 - a. **Submitted + Skipped** should be equal to the number of items (files and folders) on the target share unless the scan service was denied accessing in one or more subfolders due to permissions set on those sub-folders.
 - b. Analyzed + Unsuccessful + Pending (if the scan is in progress) should be equal to the File Submitted count.
- 2. Click the **Download** link of a report to export the details in a CSV file or click **Details** to view the information about the scan.

Steps to create a new report

- 1. From the navigation panel on the left, click **REPORTS**. The *Active Reports* page opens.
- 2. Click **New Report**. The New Report page opens. This page presents the information that is necessary to create the scan necessary for the report.
- 3. Step 1: Enter the folder path
 - a. Enter the UNC path to the root folder that contains the documents or sub-folders with documents that must be scanned.
 - b. Select the option **Exclude specified folders from the path** to exclude sub-folders from the path specified.
 - c. Click Next.

ి Sensitive Cont	ent Manager
II. DASHBOARD	New Report

The information displayed on this page is described below:

Report Summary

- a. **Submitted** date and time when the scan was submitted.
- b. Folder Path the UNC location of the root folder that contains one or files or folders to be analyzed.
- c. Profile name of the profile used in the scan
- d. Submitted By identity of the user who submitted this report in the format domain\username
- e. Completed date and time when the scan was completed.
- f. Duration the time taken to complete the scan.

Report Overview

- a. **Status** indicates the state of the job. Valid values are *In Progress, Canceling, Canceled* and *Completed*.
- b. **Files Submitted** the number of files that could be analyzed and have been submitted for analysis by the system. When the **Status** indicates *In Progress*, this value will be incremented every time a file is submitted for analysis. When the **Status** indicates *Completed*, this value will indicate the total number of files that were submitted for analysis.
- c. **Pending** the number of files waiting to be scanned. This parameter is displayed when **Status** is *In Progress*, otherwise it is hidden.
- d. **Analyzed** indicates the subset of the **Files Submitted** that were successfully analyzed. When the **Status** indicates *In Progress*, this value will be incremented every time a file is successfully analyzed. When the **Status** indicates *Completed*, this value will indicate the total number of files that were successfully analyzed.
 - Warning indicates the subset of the Files Submitted that have defects but allows a successful scan.
- e. **Unsuccessful** indicates the subset of the **Files Submitted** that could not be analyzed. When the **Status** indicates *In Progress*, this value will be incremented every time a file could not be analyzed. When the **Status** indicates *Completed*, this value will indicate the total number of files that could not be analyzed.
- f. **Skipped** the number of files that could not be submitted and were not processed any further.

Report List

- a. Parent File Path the UNC path of the file that has been submitted for analysis.
- b. File Name name of the file that has been submitted for analysis.
- c. Status the result of the analysis. Valid values are Successful and Unsuccessful.
- d. Terms Detected a semi-colon delimited list of the terms detected.
- e. **File Id** The globally unique identifier (GUID) of the file submitted for a scan. Click to expose this column.
- f. **Submitted On** The date and time when the file was submitted for a scan. Click to **L** expose this column.

Click **¬**^L to hide the **File Id** and **Submitted On** columns.

Managing items per page

To customize the number of items displayed on the page, click the **Items per page** drop down below the list and choose the number of items you wish to display. If there are more report detail records than the list can display, you can use the navigation links below the list to browse through more search terms.

NOTE: A maximum of 10,000 detail records can be viewed across all pages. If the number of files in the scan exceed 10,000 you can download the full or filtered list as a CSV file and use Excel or a similar desktop tool to view the results.

Filtering scan results

Enter a word in the **Filter** field above the list in either the *Report Details - All* or *Report Details - Successful* view, to filter the set of report detail records by the word entered.

Downloading scan results

1. Click Download. The Download Report Details dialog opens.

ం ⁹ Sensitive Content Manager మిరియటినికరణతరాగా 🙎						
11. DASHBOARD	Report Details - All	Download Report Details	Download

2. Expand the *Filter* section to download a subset of the scan results if needed. Then enter the information as described below:

- a. Format Choose an export format from the following option: Default or Metalogix Essentials
- b. **Parent Folder Path** enter the folder path which contains the files to download. All subfolders in the specified folder will be part of the filter criteria.
- c. File Name enter a file name to download.
- d. Status Choose from one of the following status values: Any, Error, Successful or Warning. For example, if you choose Error as the status, then the scan results where the status indicates an Error will be included in the filter criteria.
- e. Search Term Select the search term from the drop down list that appears that you want to include in the filter. For example, if you enter Government Identification Number as the search term, then the scan results where the Government Identification Number was detected will be included in the filter criteria. You can also include a custom search term manually. For example, *Medical ID* could be custom search term. Custom search terms may be listed in the search terms list if they are part of a current profile. Custom search terms will not be listed if you removed the term from a profile and you must enter it manually.
- 3. Click **Download** to export the scan results to a CSV file with the specified export **Format**. Click **Reset** to clear the filter or click **Close** to confirm the cancellation and exit the dialog.

Journals

Journal are log entries from report scans that indicate files that were skipped during a scan, warnings, and unsuccessful scan attempts

In this topic:

- Steps to view journals
- <u>Managing items per page</u>
- Filtering journal items
- Downloading journal items

Steps to view report journals

- 1. From the navigation panel on the left, click **REPORTS**. The Active Reports page opens.
- 2. Select a report and click **Details** to open the *Report Details All* page.. Then click Journals to open the *Report Journals All* page

-or-

Select a report and use the **Report Overview** information box to view various Report Journals as described below:

-Report Overview]
Status: In Progress	
Files Submitted: <u>5,985</u> total.	
Pending: <u>3,686</u> remaining. Analyzed: <u>2,091</u> analyzed (Warnings: <u>32</u>) Unsuccessful: <u>208</u> so far.	Report Journals - Warnings Report Journals - Unsuccessful
Skipped: 2 total.	Report Journals - Skipped
Skipped. E total.	Nepercournab - Shipped

Click the link in the Warnings parameter. The Report Journals - Warnings page opens.

-or-

Click the link in the **Unsuccessful** parameter. The *Report Journals - Unsuccessful* page opens. -or-

Click the link in the **Skipped** parameter. The *Report Journals - Skipped* page opens.

Managing items per page

To customize the number of items displayed on the page, click the **Items per page** drop down below the list and choose the number of items you wish to display. If there are more report journal items than the list can display, you can use the navigation links below the list to browse through more search terms.

NOTE: A maximum of 10,000 journal items can be viewed across all pages. If the number of files in the scan exceed 10,000 you can download the full or filtered list as a CSV file and use Excel or a similar desktop tool to view the results.

Filtering scan results

Enter a word in the **Filter** field above the list in either the *Report Journal - All, Report Journal - Warnings, Report Journal - Unsuccessful,* or *Report Journal - Skipped* page to filter the set of report journal items by the word entered.

Downloading scan results

1. Click **Download from the any Report Journals page** The *Download Journals* dialog opens.

- 2. Select a status from the Include records with the selected status value drop down. The options are: All, Error, Skipped and Warning.
- 3. Click **Download** to export the scan results to a CSV file. Click **Reset** to set the **Include records with the selected status value** to **All**, or click **Close** to confirm the cancellation and exit the dialog.

Configuration

This section describes the components and properties that control the functionality of SCM. The following topics are described in this section:

- Profiles
- <u>Search Terms</u>
- <u>Settings</u>

Profiles

A profile is a named collection of content search and analysis specifications. Each profile is made up of search terms and regular expressions that can detect sensitive content in English, German, Spanish, Italian, French and Portuguese. SCM ships with 4 default profiles:

- General Data Protection Regulation (GDPR)
- Personally Identifiable Information (PII)
- Protected Health Information (PHI)
- Payment Card Information (PCI)

The file search and analysis criteria requirements for your organization may differ from the system profiles that are available. For example, you may want to create a custom profile to group a different subset of the predefined search terms, add custom search terms for sensitive data types, or analyze data that falls outside common definitions of PII, PHI or financial data. Custom profiles created with the SCM profile wizard can be made available to both SCM and ControlPoint users.

With the standard or custom profiles, SCM allows you to analyze the following file types -

- Compressed files (ZIP, 7z, TAR, RAR etc.)
- Comma Separated Values (CSV)
- Log Files
- Microsoft Excel
- Microsoft Excel 2007
- Microsoft Outlook Express Mail Message
- Microsoft Outlook Message
- Microsoft PowerPoint Presentation

- Microsoft PowerPoint Presentation 2007
- Microsoft PowerPoint Show
- Microsoft PowerPoint Show 2007
- Microsoft Word Document
- Microsoft Word Document 2007
- Open Document Text
- Portable Document Format (PDF)
- PowerShell
- Rich Text Format (RTF)
- Text Document

The columns in the list are as follows:

- a. Search Term name of the search term
- b. **Type** indicates whether the search term is a standard search term **b** or a custom search term **b**. Standard search terms cannot be edited.
- c. **Description** explanation of the search term.

- d. Used in Profiles integer value that indicates the number of profiles that use the search term.
- The list can be customized to display more or less items on the page. Click the **Items per page** drop down below the list and choose the number of items you wish to display. If there are more search terms than the list can display, you can use the navigation links below the list to browse through more search terms.
- Enter a keyword in the **Filter** field above the list to filter the set of search terms by the keyword entered.
- Click **Refresh** to retrieve and display a fresh set of search terms from the SCM repository.
- 2. Click a search term to view its details.

Steps to create a new search term

- 1. From the navigation panel on the left, click **CONFIGURATION** and then click **SEARCH TERMS**. The *Search Terms* page opens.
- 2. Click **Create** + to open the *Custom Search Term* window.

Specify the property values as described below:

- a. Name enter a unique search term name. The profile name cannot exceed 100 characters.
- b. **Description** enter a description of the search term. The description text should not exceed 256 characters.
- c. **Expression** enter a regular expression to match a text pattern in a file.
- d. Sample Text enter any text that contains the pattern you want to match.
- 3. Click **Test**. If a pattern match occurs in the **Sample Text** field, the matching pattern will be highlighted.
 - **NOTE:** If the test expression includes inline modifiers like (?i) for case insensitivity, you may get false negative results. For these expressions please consider testing them at <u>http://regexstorm.net/tester</u>

4. Click **Save** to save the new search term. Verify that it is listed in the *Search Terms* list. You can click **Cancel** to exit the window.

Steps to edit an existing search term

- 1. From the navigation panel on the left, click **CONFIGURATION** and then click **SEARCH TERMS**. The *Search Terms* list page opens.
- 2. Select a custom search term that you want to edit. You cannot edit a standard search term.
- 3. Click Edit 🖍 to open the Custom Search Term window.
- 4. Review and revise the properties as needed.
- 5. If you revise the regular expression it is recommended that you enter some appropriate text in the **Sample Text** field and click **Test** to verify the regular expression.
- 6. Click Save to save the new search term. You can click Cancel to exit the window.
- **CAUTION:** If a search term is modified while files are being scanned with a profile that contains the same search term, the scan will continue and all remaining files that are scanned will use the revised search term.

Steps to delete an existing search term

- 1. From the navigation panel on the left, click **CONFIGURATION** and then click **SEARCH TERMS**. The *Search Terms* list page opens.
- 2. Select a custom search term that you want to delete. You cannot delete a standard search term.
- 3. Click **Delete** and then click **Yes** in the confirmation dialog to confirm the deletion.
- CAUTION: If a search term is deleted while files are being scanned with a profile that contains the same search term, the scan will continue but none of the remaining files will be checked for patterns that match the deleted search term.

Settings

Log files that are generated by the application have different levels of severity. The *Settings* page lets you specify the logging level of system messages.

Steps to set the logging level

- 1. From the navigation panel on the left, click **CONFIGURATION** and then click **SETTINGS**. The *Settings* page opens.
- 2. From the **Logging Level** drop down, select one of the following log levels listed below by descending severity:
 - Verbose Logs that contain the most detailed messages. These messages may contain sensitive application data. These messages are deactivated by default and should never be activated in a production environment.
 - **Debug** Logs that are used for interactive investigation during development. These logs should primarily contain information useful for debugging and have no long-term value.
 - Information Logs that track the general flow of the application. These logs should have long-term value.
 - **Warning** Logs that highlight an abnormal or unexpected event in the application flow, but do not otherwise cause the application processes to stop.
 - **Error** Logs that highlight when the application processes stop due to a failure. These should indicate a failure in the current activity, not an application-wide failure.
 - Fatal Logs that describe an unrecoverable application or system crash, or a catastrophic failure that requires immediate attention.
 - NOTE: The level you choose will also include all levels below it. For example, if you choose Verbose, all the other log levels will also be tracked. If you choose Warning, then the only the log levels Warning, Error and Fatal will be tracked.

When a log level is changed, you must allow between two to five minutes for the new log level to be distributed to all the services. If scans are in progress, the new log level will be applied only when the services are able to register the new log level.

54

8

Support Tools are provided with the installation media.

To access the support tools:

- 1. Download the installation ZIP file and extract all the files on the machine on which you are planning to install the SCM components.
- 2. Open the Support Tools folder.

About the Support Tools

A summary of each tool is provided below. Each folder contains a *ReadMe.txt* file that provides detailed information about the tool.

Archive-Logs

A PowerShell script to create a copy of all the log files for SCM into a single .zip file.

Forensics

PowerShell scripts to visualize the timeline of verbose SCM log entries for better troubleshooting.

Mx Connectivity Tests

PowerShell script and aspx page to troubleshoot the connectivity to SQL server.

PemTool

Tool to generate the .pem files needed for RabbitMQ

Phoenix

Command-line program that helps you to process RabbitMQ dead-letter messages. Helps you to capture content to SQL, resubmit, or move messages to a new Queue.

Rabbit Migration

PowerShell script to migrate the RabbitMQ base folder from one location to another. You would typically move it from the %APPDATA% folder to a shared location like the %PROGRAMDATA% folder.

Rabbit Snapshot

PowerShell script to import and export a RabbitMQ configuration from one machine to another.

SCM diagnostics

Collects information about the environment and logs for troubleshooting like Event logs, IIS logs, list of installed programs, RabbitMQ configuration, SCM Logs and application .json files.

SCM Report Conversion

PowerShell script to convert the exported scan report to an Essentials format for integration. In SCM 2.1.1 and later versions, report conversion is possible directly from the Administration Center.

SCM Scans

PowerShell scripts to submit a file share scan and download the resulting CSV report. The script requires a *Profile Id*. To get the *Profile Id* of a standard or custom profile:

- 1. From the navigation panel in the Administration Center, click CONFIGURATION and then click PROFILES. The *Profiles* page opens.
- 2. Click a profile link. The *Profile Summary* page opens.
- 3. Get the *Profile Id* from the URL. For example, for the Personally Identifiable Information (PII) profile, the *Profile Id* is 1 (https://<domain:port>/#/profile/view/1)

ScpTool

An executable to test access to the Service Connection Point (SCP) data in Active Directory.

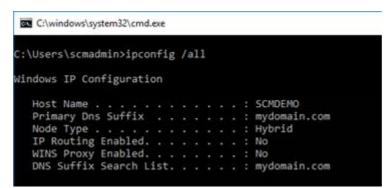

56

Appendix

9

Steps to get the URL for the SCM Administration Center

- 1. Log in to the SCM Server and open the **Command** console.
- 2. Run the command <code>ipconfig /all</code>

- 3. Get the FQDN of the server from the windows command prompt. This gives you [Hostname]. [Primary Dns Suffix]. For example, SCMDEMO.mydomain.com
- 4. Open **IIS Manager** to get the protocol and port.
 - a. Expand the server node.
 - b. Expand the Sites node and select SCMAdminPortal
 - c. From the *Actions* pane click **Bindings**. This will give you [protocol] and [port]. For example, the protocol is **https** and the port binding is **44300**.

S	ite Bindin	igs				? ×
	Type https	Host Name	Port 44300	IP Address *	Binding	<u>A</u> dd <u>E</u> dit <u>R</u> emove
	<		_		>	<u>B</u> rowse <u>C</u> lose

Gather all this information together to construct the URL [protocol]:// [Hostname].[Primary Dns Suffix]:[Port]. For example, https://SCMDEMO.mydomain.com:44300

Appendix

About Us

Quest creates software solutions that make the benefits of new technology real in an increasingly complex IT landscape. From database and systems management, to Active Directory and Office 365 management, and cyber security resilience, Quest helps customers solve their next IT challenge now. Around the globe, more than 130,000 companies and 95% of the Fortune 500 count on Quest to deliver proactive management and monitoring for the next enterprise initiative, find the next solution for complex Microsoft challenges and stay ahead of the next threat. Quest Software. Where next meets now. For more information, visit <u>www.quest.com</u>.

Contacting Quest

For sales or other inquiries, visit <u>www.quest.com/contact</u>.

Technical Support Resources

Technical support is available to Quest customers with a valid maintenance contract and customers who have trial versions. You can access the Quest Support Portal at https://support.quest.com

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. The Support Portal lets you:

- Submit and manage a Service Request
- View Knowledge Base articles
- Sign up for product notifications
- Download software and technical documentation
- View how-to-videos
- Engage in community discussions
- Chat with support engineers online
- View services to assist you with your product
