Quest

Modernize your Active Directory

Helping you keep legacy Active Directory from standing in the way of innovation.

Your Active Directory (AD) is the backbone of your IT infrastructure. With so many companies facing mergers and acquisitions, advances in new technological demands like the cloud or Windows Server 2016, and increased compliance needs and security breaches, chances are your AD is no longer structured to meet your organization's changing needs.

What happens when legacy AD design or management stands in the way of innovation? Before rushing to implement new technology, it's time to evaluate the health and readiness of your AD environments. You need to optimize your AD to be ready to respond to business demands and emerging technology. It's time to make your infrastructure more efficient, more secure and easier to manage. It's time to modernize your AD.

HOW TO MODERNIZE YOUR ACTIVE DIRECTORY

Quest Services is here to help you move beyond your organization's operational constraints and accelerate modernization. We bring you peace of mind by combining the strengths of our proprietary AD software, tools and domain expertise for an end-to-end solution to modernize your Active Directory. Our approach is simple: We listen to you, we learn from you, we collaborate with you to focus on discovering the unique challenges that impact your business, and we provide an actionable plan to establish a healthy and up-to-date AD that grows with your company.

Quest has been a leader in Active Directory since the beginning. We've managed 150 million AD users, audited 101 million AD users, and migrated 72 million accounts to AD.

BENEFITS:

- Increase IT efficiency and shift resources to innovation

- Lower costs, reduce effort and eliminate risk

- Automate error-prone administrative tasks

- Reduce security risks

- Relieve the IT burden of achieving compliance goals

- Mitigate downtime and speed time to recovery

- Ensure continued support to meet evolving technology

ACTIVE DIRECTORY INFRASTRUCTURE ASSESSMENT

It's likely your AD was deployed many years ago, but your business has changed. Our Active Directory Infrastructure Assessment will review the logical and physical design of your environment to identify operational or management deficiencies.

Whether it's due to mergers, acquisitions, divestitures, regulations, adding new applications or general growth, if you haven't modified the structure of your AD as your business has evolved, you're likely using a directory that doesn't support your business the way it should. This increases risk where risk was supposed to be reduced.

The Active Directory Infrastructure Assessment service means we outline everything that needs to be moved, what conflicts need to be resolved and, most importantly, identify gaps between your current state and to where you want to be, whether it's preparing for the cloud or tackling merger or acquisition integration. We understand that success comes from proper planning, a proven process and enabling your team to get the job done.

ACTIVE DIRECTORY MANAGEMENT ASSESSMENT

Maintaining AD can be challenging. With the Active Directory Management Assessment, we take the time to do a full AD assessment, focusing on how your AD can be managed and administered more effectively — from tools, processes and people. And we look at areas that can improve administrator productivity and service levels by automating repetitive and remedial tasks, ultimately lowering costs.

Whether it's a lack of time and resources or trouble understanding what changes have been made, it's clear that organizations need a more streamlined AD environment. More importantly, when organizations are considering restructuring AD, they often fail to recognize the importance of building in governance to ensure their investment yields a return.

ACTIVE DIRECTORY COMPLIANCE ASSESSMENT

With the Active Directory Compliance Assessment, we review your current auditing and reporting practices, and identify gaps or opportunities to be more efficient in meeting compliance requirements. We help you develop a roadmap to adhere to regulations and minimize exposure to security breaches.

Most organizations say that security compliance and auditing are their top AD concerns, but they often don't know where to start. Preventing security breaches, preparing for audits and implementing compliance requirements are labor intensive, burdensome and costly. And not having a clear understanding of how to address these problems can quickly lead to regulatory fines or a security breach. That's why modernizing your AD is critical.

ACTIVE DIRECTORY RECOVERY ASSESSMENT

Can your organization recover from unintended changes or unplanned outages of AD? With the Active Directory Recovery Assessment, we will review your process for backing up and recovering your AD and identify areas for improvement to minimize downtime, as a component of your overall business continuity plans.

Because AD is the hub of your IT operations, downtime is not an option. With all the changes in technology, it's understandable that many customers are concerned that their AD disaster recovery plan isn't going to be effective if a disaster should strike. In reality, it's not a matter of if you have an issue with AD, it's a matter of how severe the impact will be. Leverage our Active Directory Recovery Assessment service to give you operational peace of mind.

Let Quest Services create an actionable plan to modernize your AD and provide a long-term strategy to keep your AD clean, efficient, compliant and readily available. Contact your sales representative or visit the Quest Services page to view our full line of services.

ABOUT QUEST

Quest helps our customers reduce tedious administration tasks so they can focus on the innovation necessary for their businesses to grow. Quest® solutions are scalable, affordable and simple-to-use, and they deliver unmatched efficiency and productivity. Combined with Quest's invitation to the global community to be a part of its innovation, as well as our firm commitment to ensuring customer satisfaction, Quest will continue to accelerate the delivery of the most comprehensive solutions for Azure cloud management, SaaS, security, workforce mobility and data-driven insight.
