

# One Identity Manager Learning Paths

One Identity Manager is a robust product with many parts and features. These learning paths are designed to provide students a clearly defined route to develop technical expertise so that they can integrate the powerful components of One Identity Manager. The paths start with a Basic Training Bundle and continue through various specializations depending on the student's role in an implementation or ongoing operations. Specialized courses include planning, installation, implementation, customization, troubleshooting, and customer specific trainings.
