Latest Updates – What's New

Below is a summary of the updates made to the latest versions of this compatibility matrix:

- April 2022 – Added IBM LTO-9 and QUANTUM LTO-9 to supported drives.

NetVault Support Policy

Quest Software Product Lifecycle and Support Services Guidelines detailing End-of-Support-Life (EOSL) procedures for all product lines is available online at: https://support.quest.com/netvault/lifecycle

Additionally, individual device manufacture's End-of-Life and End-of-Support-Life product support policy and statements supersede any support implied directly or indirectly by the information within this document.

For additional information or device support requests please email of Interop.DP@quest.com

Additional NetVault Compatibility Matrices

Additional NetVault compatibility matrices are available from the Quest Website at http://www.quest.com/netvault/#docs

Available matrices include:

- NetVault Supported Platforms
- NetVault APM and Plugin Supported Platforms
- NetVault Supported NAS Appliances and NDMP compatibility
- NetVault Bare Metal Recovery (VaultDR) Supported Platforms

Important Considerations

- SAS Interfaces are supported on MAC OS X platforms with NetVault Backup v8.5 or higher.
- SAS Interfaces are supported on AIX platforms with NetVault Backup v8.5.1 or higher.
- SAS Interfaces are NOT supported on HP-UX platforms.
- SAS Interfaces are NOT supported on NetWare platforms.
- Only ATAPE drivers are supported on AIX platforms.

- For Supported Virtual Libraries and De-duplication Technologies; Backup and Recovery operations are only supported for Block Interface or LAN based target devices. Remote backup and recovery cloud or replication targets are not supported at this time.
- For Virtual Tape Libraries (VTL) attached directly to NDMP Environments by way of block Interfaces such a FC or iSCSI please refer to the NDMP compatibility guide and the individual manufacturer for support details. In general all VTLs are supported via the NDMP interface in locally attached, remote attached or 3-way transfer models. Emulated 3-Way transfer models are designate herein by way of the NDMP interface destination specifically.
- Some Tape Libraries support partitioning the physical aspects of the Library into Logical Configuration Items so that each partition is presented as an exclusive subset including slots, drives and mail slots (Storage Elements, Data Transfer Elements and Import/Export Elements). NetVault: Backup generally supports partitioned Libraries so long as the SCSI command support is not altered by the logical partitioning.
- The NetVault Compatibility Guides for supported platforms and supported Tape Libraries therefore needs to be updated to document that fact that SCSI tape libraries on a HPUX 11.31 machine cannot be added to NetVault.
  - HPUX 11.23 and earlier versions should work.
  - This would affect all currently supported versions of NetVault including NetVault 9.2 and 10.0.x

NetVault Supported Accelerated Protocols

NetVault supports the Accelerated Protocols listed below on all operating systems that are supported by NetVault as either a Backup Server or SmartClient platform unless otherwise noted. Some device restrictions will be imposed by third party vendors for usages with their applications or operating platforms, consult your resellers or solution vendors to ensure your devices are fully supported by all vendors.

NetVault Supported Automated Tape Libraries

NetVault supports the library and tape devices listed below on all operating systems that are supported by NetVault as either a Backup Server or SmartClient platform unless otherwise noted. Some device restrictions will be imposed by third party vendors for usages with their applications or operating platforms, consult your resellers or solution vendors to ensure your devices are fully supported by all vendors. Refer to the Supported Drive section Matrix for important notes regarding the latest available drive support for libraries included in this section.

- Once a drive is listed as certified in the Tape, Removable, and Optical Drives table it will be supported in any library that is also listed in the Supported Libraries Matrix unless explicitly stated.

Cleaning Legend

Blank = not Supported
S = Standard Cleaning Only Supported
G = Generic Cleaning Only Supported
B = Both Standard and Generic Cleaning is Supported. Refer to the device's Application Notes for details

NetVault Supported Tape, Removable, and Optical Drives

GENERAL NOTES:

- Once a drive is listed as certified here it will be supported in any library that is also listed in the Supported Libraries Matrix unless explicitly stated.

For additional information or device support requests please email of Interop.DP@quest.com
