About Us	17
Contacting Quest	17
Technical Support Resources	17

Introduction

The SMTP feature in Archive Manager for Exchange allows processing of messages from external email server (O365, Gmail, Exchange, etc.) into Archive Manager. To set up the SMTP feature follow the steps in the order shown below:

- Configure external email server to redirect incoming messages to SMTP service of Archive Manager. See [Exchange Server Configuration](#) ⁵.
- Install the SMTP feature. See [Installation](#) ¹¹.
- Configure the SMTP feature in the Archive Manager Configuration tool. See [Configuration](#) ¹⁴.

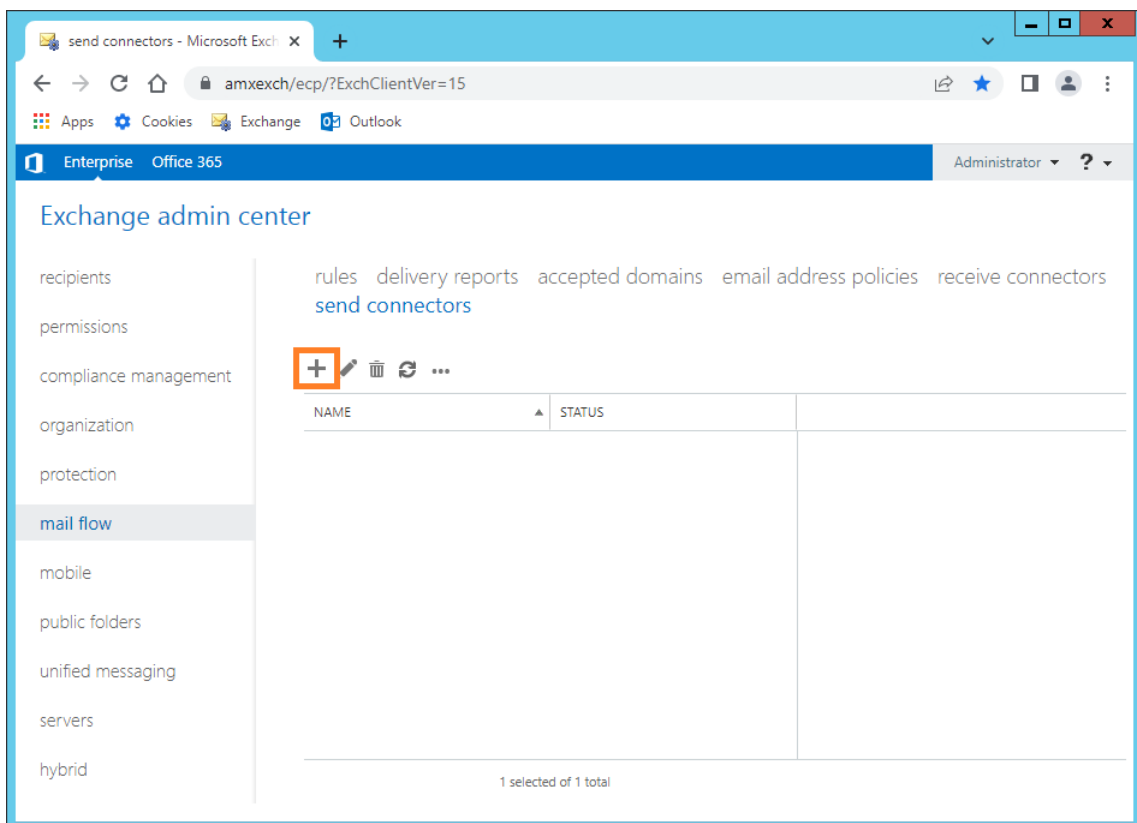

Exchange Server Configuration

Your Microsoft Exchange Server must to be configured to allow sending email messages to the SMTP service for Archive Manager. Configuration of the Exchange server consists of the following steps in the Exchange admin center.

1. Configure the Send connector
2. Configure rules for relay of messages to SMTP service for Archive Manager
3. Test communication between Exchange server and SMTP Service for Archive Manager

Steps to configure the Send connector

1. Log in to the Exchange admin center. Click **mail flow** > **send connectors**.

2. Click **+** to create a new send connector. The *new send connector* window opens.
3. Enter a name for the connector (for example, AM-CONNECT). Then select **Custom**.

new send connector

There are four types of send connectors. Each connector has different permissions and network settings. [Learn more...](#)

*Name:
AM-CONNECT

Type:

☒ Custom (For example, to send mail to other non-Exchange servers)

☐ Internal (For example, to send intranet mail)

☐ Internet (For example, to send internet mail)

☐ Partner (For example, to route mail to trusted third-party servers)

Next Cancel

4. Click **Next**.
5. Select **Route email through smart hosts**. Then click **+** to add a new smart host. Enter the FQDN or IP address of the computer where the SMTP service for Archive Manager is installed.

new send connector

A send connector can route mail directly through DNS or redirect it to a smart host. [Learn more...](#)

*Network settings:
Specify how to send mail with this connector.

☐ MX record associated with recipient domain

☒ Route mail through smart hosts

+ edit -

SMART HOST
amxserver.democorp.com

☐ Use the external DNS lookup settings on servers with transport roles

Back Next Cancel

6. Click **Next**.

new send connector

Configure smart host authentication. [Learn more...](#)

Smart host authentication:

☒ None

☐ Basic authentication

☐ Offer basic authentication only after starting TLS

*User name:

*Password:

Note: all smart hosts must accept the same username and password.

☐ Exchange Server authentication

☐ Externally secured (for example, with IPsec)

Back Next Cancel

7. Select **None** and click **Next**.
8. Click **+** to define the address space for the new send connector by . Ensure that the domain name is listed in the accepted domains in the *Allowed access points* tab in the Archive Manager Configuration tool.

new send connector

A Send connector routes mail to a specified list of domains. These domains can be an SMTP address space or a custom type. [Learn more...](#)

*Address space:
Specify the address space or spaces to which this connector will route mail.

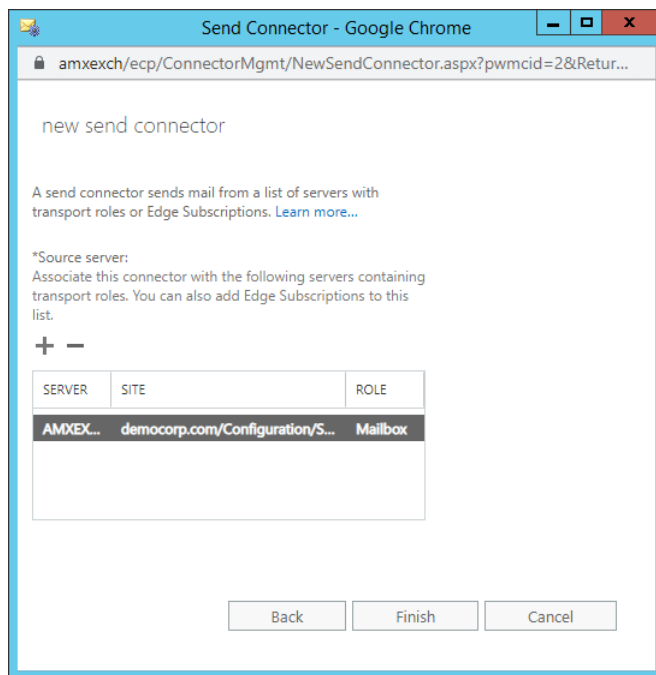

+ ✎ -

TYPE	DOMAIN	COST
SMTP	democorp.com	1

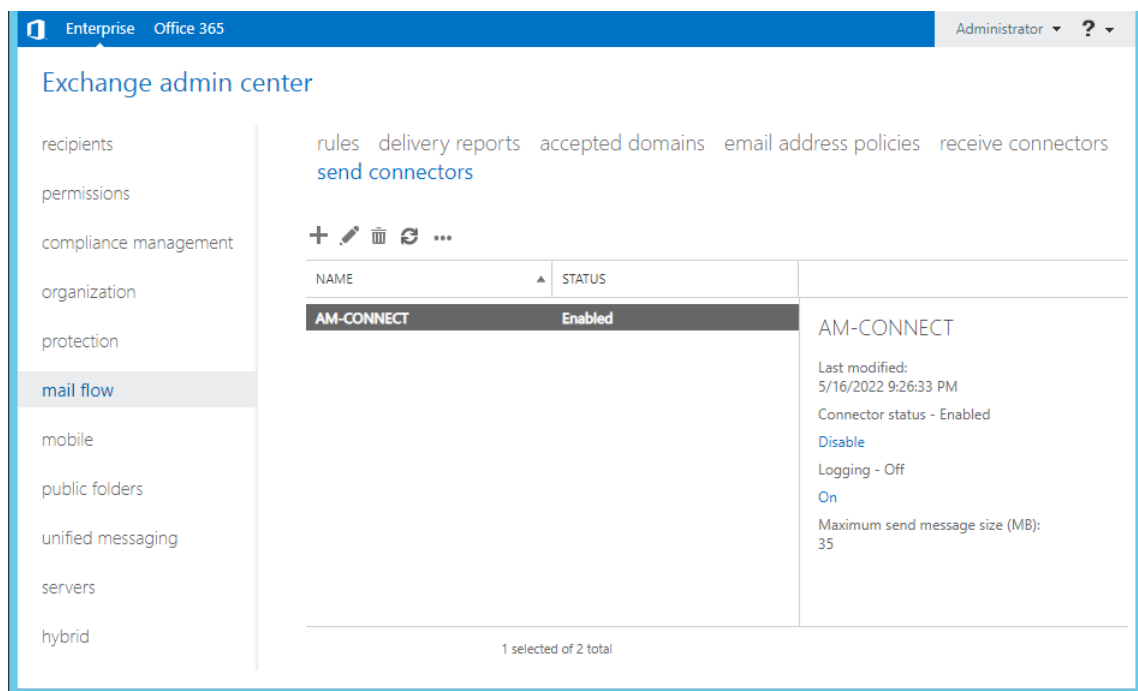

☐ Scoped send connector

Back Next Cancel

9. Click **Next**.
10. Click **+** to specify the source Exchange server.

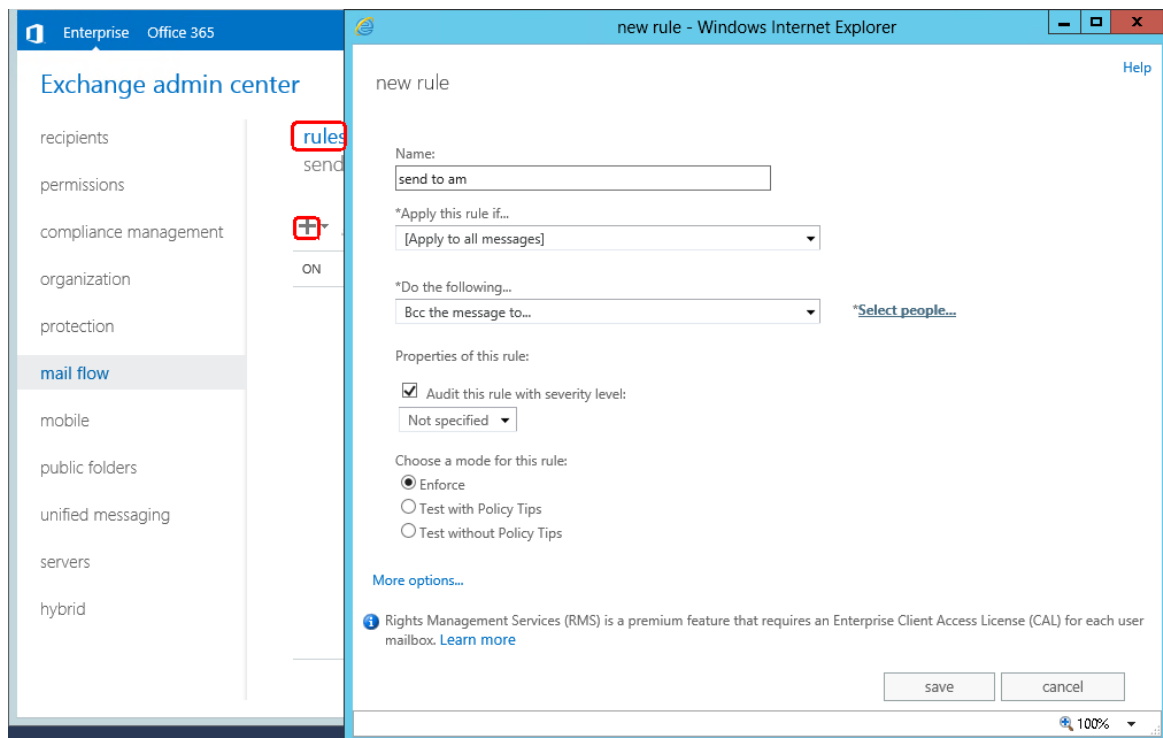

11. Click **Finish**. The new send connector is displayed in send connectors list.

Steps to configure rules for relay of messages to SMTP service for Archive Manager

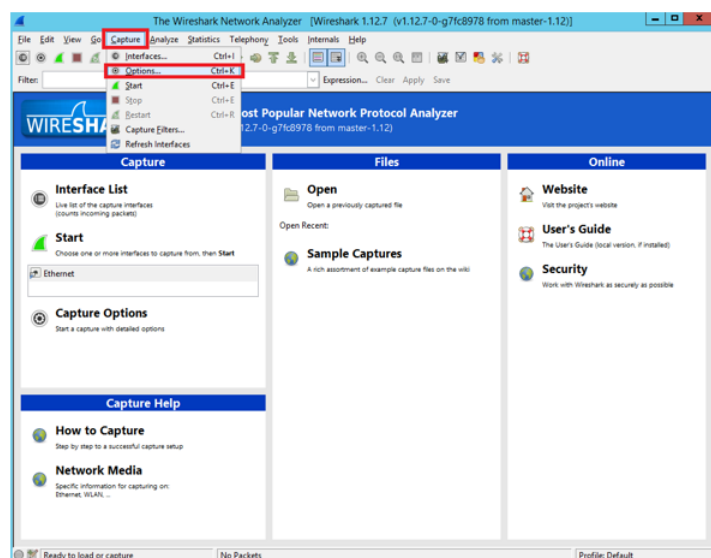

1. Open the rules list of the mail flow section and click **+**.
2. Enter a name for your rule. Then in the drop-down select **Apply to all messages** and in the second drop-down select **Bcc the message to**.

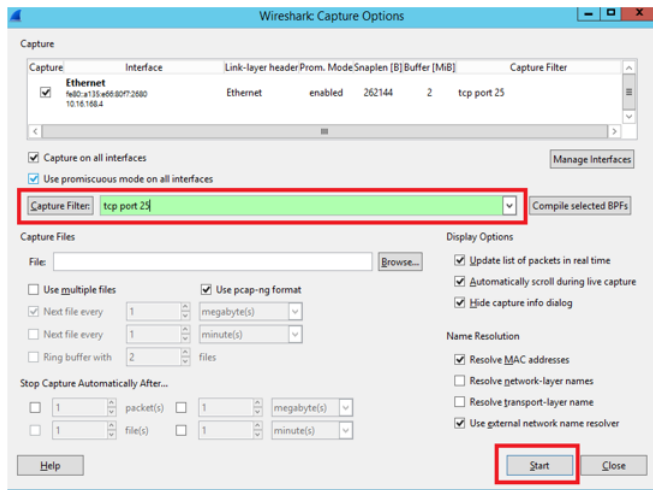

3. Click **Select people** and specify email address of people who should receive a Bcc email.
4. Click **OK** to finish. Then click **Save** to finish the setup of rule and save. A confirmation question will appear. Click **yes** to confirm creation of rule.

Steps to test communication between Exchange server and SMTP Service for Archive Manager

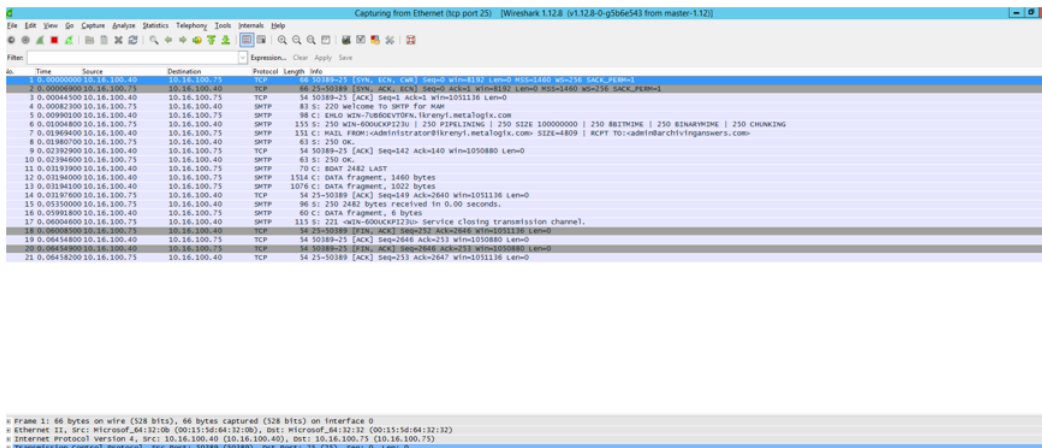

1. You can use WireShark application with filter to port 25 (Default SMTP port) to test communication with MS Exchange Server
2. After downloading and running the WireShark application it is necessary to filter network communication only to port 25. To do this click **Capture** menu and **Options**.

3. In the **Capture Filter** write tcp port 25 and click **Start**.

4. Final step of test is creating and sending of test email from outlook or OWA. If everything was setup correctly, smtp communication will be as shown .

Installation

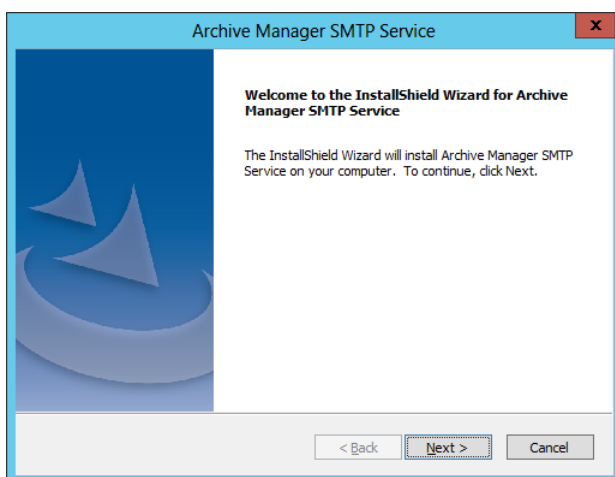

To allow Archive Manager to use the SMTP feature, it must be installed and configured in the domain where Archive Manager is installed.

Prerequisites

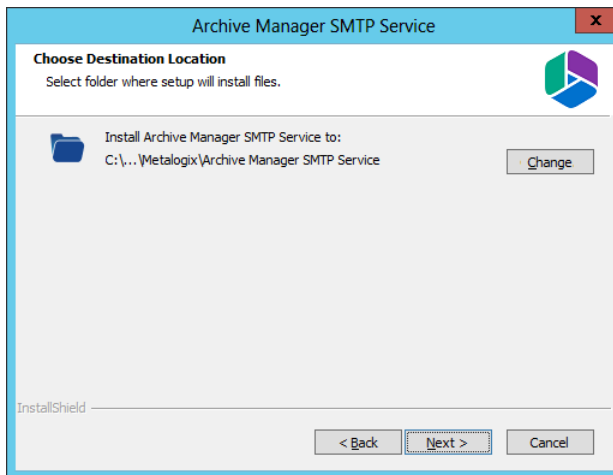

- .NET Framework 4.8
- Windows Server 2012 or higher
- Archive Manager for Exchange 8.7
- Database
 - MS SQL Server 2012 or higher
 - Oracle 12c or higher

Steps to install the SMTP service

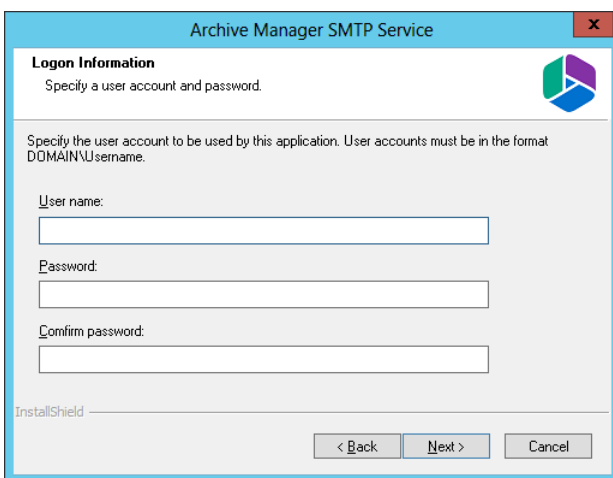

1. Locate and run the **Archive Manager SMTP Setup.exe** setup file. For example, the default folder is C:\Metalogix\Archive Manager Installation Package\SMTP. The **Welcome** page of the Archive Manager Service install wizard.

2. Click **Next**. The **License Agreement** page appears.
3. Click **Yes** to accept the License Agreement. Optionally, you can click the **Print** button to print the agreement.
4. The **Choose Destination Location** page appears. Click **Change** to alter the destination location if necessary.

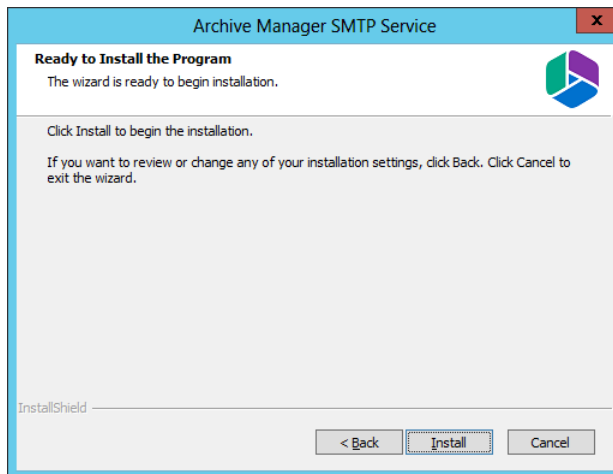

5. Click **Next**. The **Logon Information** page appears.

6. Enter the account details of a user who is authorized to run the SMTP service. It is recommended to use the account information of the super-user that was used to install Archive Manager for Exchange.
7. Click **Next**. The **Firewall Settings** window appears if the Windows Firewall is active on your computer.

8. By default, the **Allow programs to communicate through Windows Firewall** is checked. This will allow critical services to communicate with the SMTP service. If you uncheck the check box, critical services may not be able to communicate through the firewall.
9. Click **Next**. The **Ready to Install** page appears.

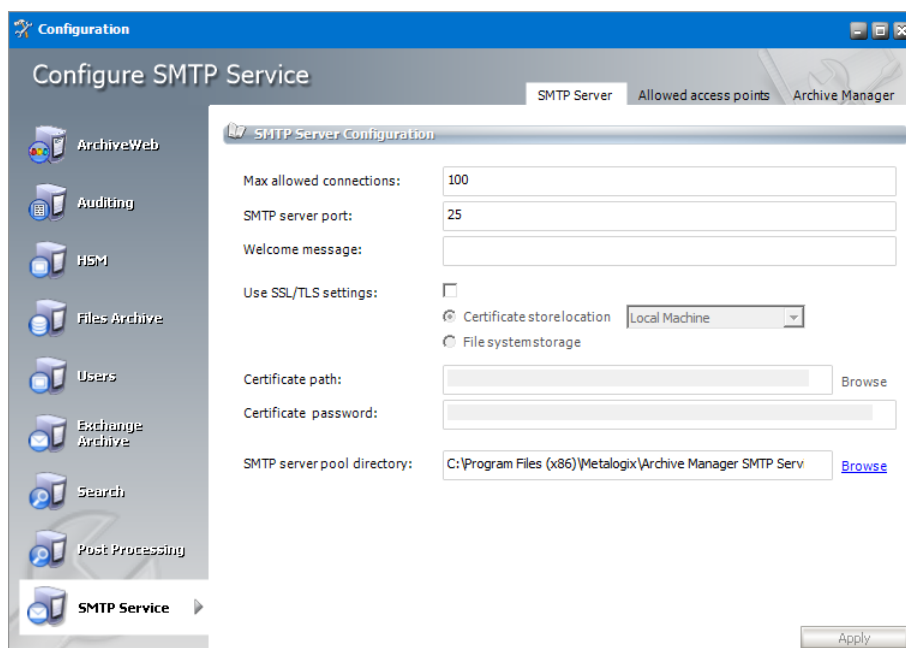

10. Click **Install** to begin the installation. If you want to review or change the installation settings, click the Back button. To exit the wizard click **Cancel**.
11. The SMTP feature will be installed. Click **Finish** and continue with configuration.

Configuration

When the installation completes, the Archive Manager Configuration tool opens. Configure the SMTP feature as described below:

1. From the feature pane, open **SMTP Service**. Then click the **SMTP Server** tab.

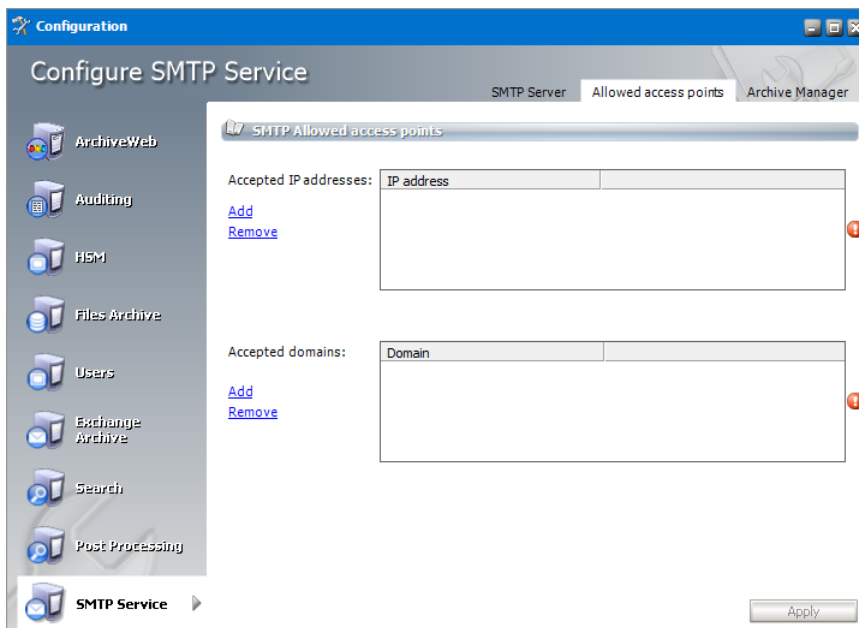

Configure the properties as described below:

- **Max allowed connections** - max number of clients using SMTP (concurrent connections); value 0 means unlimited.
- **SMTP Server Port** - enter the SMTP server port number; default port value is 25

i **IMPORTANT:** Server port must be set to 25 if TLS is used to connect the SMTP server with Microsoft 365 or Office 365. Port must be changed only if SSL communication is used. For SSL enter 465.

- **Welcome message** - just informative message to be shown to SMTP clients; server greeting text
- **Use SSL/TLS settings** - select the checkbox if SSL or TLS is used as the communication protocol, and configure the certificate details. Otherwise these options can be ignored.
 - **Certificates store location** - select this option if the certificate is stored in the registry. Then select the registry location: **CurrentUser** or **LocalMachine**.
 - **File system storage** - select this option if the certificate is stored in a file folder

- **Certificate path** - Click **Browse** to locate the certificate. The path to your certificate is filled in automatically after choosing the certificate.
 - **Certificate password** - specify if applicable.
 - **SMTP Server pool directory** - folder where emails for SMTP are coming to be processed. If the value is empty the default path (%SMTP-installation-directory%/Smtplib) is used.
2. Click the **Allowed access points** tab. Here you will define external servers for which the SMTP feature should be activated, i.e. servers that host mailboxes whose incoming messages you plan to archive via this feature. IP addresses and domains function as filters for the SMTP service.

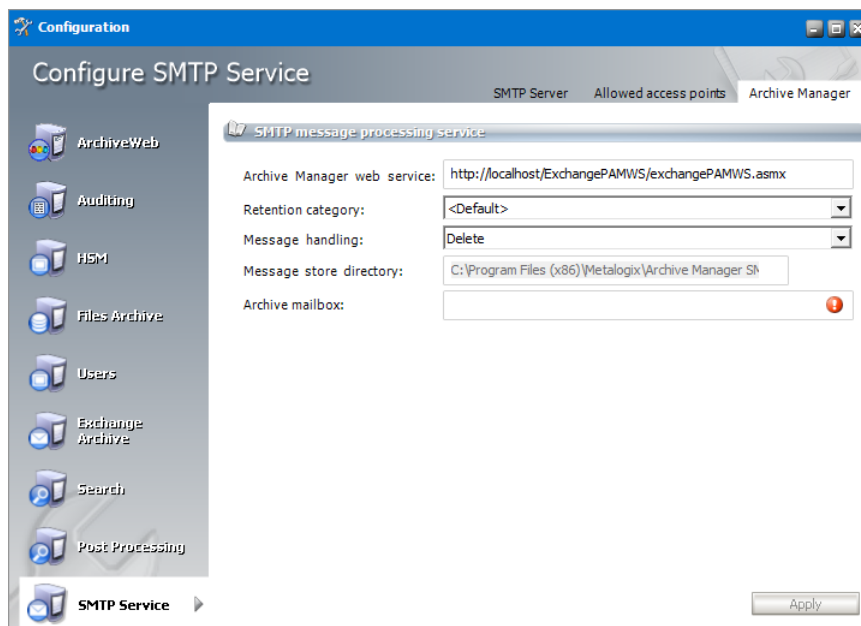

Configure the properties as described below:

- **Accepted IP addresses** - add the IP addresses of the external servers.
- **Accepted domains** - specify the desired domains.

i | **NOTE:** Microsoft 365 IP addresses are hardcoded into the SMTP service so that a user does not need to include them in allowed IP addresses..

3. Click the **Archive Manager** tab.

Configure the properties as described below:

- **Archive Manager web service** - archive Manager web service contains location of Archive Manager web service used to get available mailboxes and SMTP status of mailboxes (it is used basically for read operations in Archive Manager). Information in Archive Manager tab are stored in both SMTP service configuration file and File processing service configuration file. This field is filled-in automatically; you only need to change the `<localhost>` to you Archive Manager serve IP address if it is installed on another machine
- **Retention category** - choose the appropriate retention category. Retention categories including the `<default>` retention category are defined in the Archive Manager Administration Center (AMAC).
- **Message handling** - choose how Archive Manager should internally handle messages at processing; default option should be "Delete" to save space on the machine (email will be archived, shortcut will not be created and the original email will be deleted from the message store directory). Other options (Zip and Store) can be useful for diagnostic purposes.
- **Message store directory** - if "Zip" or "Store" is selected for Message handling, specify here the directory where zipped or stored processed messages should be stored (they are however also stored in the archive)
- **Archive mailbox** - this functions as journal mailbox, all defined SMTP communication is archived in this mailbox. When User 1 sends email to User 2, User 2 receives original email. Copy of this email is sent to journal mailbox.

4. When finished, click **Apply**.

About Us

Quest creates software solutions that make the benefits of new technology real in an increasingly complex IT landscape. From database and systems management, to Active Directory and Office 365 management, and cyber security resilience, Quest helps customers solve their next IT challenge now. Around the globe, more than 130,000 companies and 95% of the Fortune 500 count on Quest to deliver proactive management and monitoring for the next enterprise initiative, find the next solution for complex Microsoft challenges and stay ahead of the next threat. Quest Software. Where next meets now. For more information, visit www.quest.com.

Technical Support Resources

Technical support is available to Quest customers with a valid maintenance contract and customers who have trial versions. You can access the Quest Support Portal at <https://support.quest.com>

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. The Support Portal allows you to:

- Submit and manage a Service Request
- View Knowledge Base articles
- Sign up for product notifications
- Download software and technical documentation
- View how-to-videos
- Engage in community discussions
- Chat with support engineers online
- View services to assist you with your product
